2″	1,000	3/4″	8834T64	18.43	1.00

Straps with Wire Hooks and Loop Grip

Strap with Lift-Release Buckle

In addition to having a zinc-plated steel hook on each end, the free end of these straps has a sewn loop for an easier grip when tightening.

Strap with ***lift-release buckle*** has gray polyester webbing; the buckle has a textured roller that holds the webbing in place after you pull it through; release the tension by lifting the pull tab.

Strap with ***quick-tight*** buckle has black polypropylene webbing; buckle is also known as a cam buckle; lift the cam, pull the webbing through, then release the cam to hold.

Buckle Type	Webbing Wd.	Max. Lg.	Work Load Limit, lbs.	(A)		Each
Lift-Release	2″	18 ft.	333	1″	3659T43	$27.44
Quick-Tight	2″	20 ft.	333	1″	3659T54	35.97

Protective Covers for Buckles

Avoid damage to your load caused by buckle vibration during transport with these black vinyl covers. Hook and loop edging secures the cover around buckles for up to 2″ wide webbing.

88405T8 ..... $9.64

Warning! ***Never exceed work load limits. Never use for lifting applications.***

Elastic Tie-Down Straps

Elastic straps stretch and adjust for easy load securing. Straps are made of rubber with a polypropylene cover and have nonmarring plastic-coated steel swivel hooks on each end.

Strap Wd.	O'all Lg.	Maximum Stretched Lg.	(A)	Color		
2″	16″-24″	36″	1½″	Green	8832T1	$2.93

2″	28″-48″	72″	1½″	Yellow	8832T3	3.18

Light Duty Straps with Fittings

Carry or tie down loads with these adjustable straps. Color is black.

Straps ***with swivel hooks*** allow the load to rotate without twisting the strap. Hooks are black plastic.

Straps ***with mounting plates*** have a rubber shoulder pad and a latch hook to release the strap from the mounting plate. Mounting plates and latch hooks are nickel-plated steel. Mounting fasteners not included.

Also Available: Shoulder pads. Please ask for 88405T888 and specify webbing width.

A	1½″	50	9576T49	8.57
B	1″	50	9576T48	12.74
B	2″	25	9576T51	19.28

Webbing

Create your own straps, belts, and tie downs. Webbing has a finished end and a locking stitch that won't unravel when cut. To prevent fraying after cutting cotton, Nomex, and Kevlar webbing, fold and sew or use a finishing tip. For a finished end when cutting polypropylene, nylon, and polyester, use a hot-blade knife (see page 2361).

Note: Breaking strength is the force at which new webbing will break, and should never be considered the work load limit. The work load limit depends on application and the method used to create a finished assembly, and is always significantly lower than the breaking strength.

Extra-strength cotton has a nylon core. ***Lightweight polypropylene*** is economical and resists moisture. ***Shock-absorbing nylon*** has good stretch and recovery with abrasion and mildew resistance. ***Ultra-abrasion-resistant nylon*** is tightly woven for abrasion and slip resistance. ***Low-stretch polyester*** is soft and quick drying. ***Slip-resistant polyurethane-coated polyester*** has good cut resistance and stays flexible in low temperatures.

To Order: Please specify length from those listed. Please also specify color where necessary.

Also Available: Additional lengths. Please ask for 3643T888 and specify webbing material, width, length, and color (where necessary).

Buckles for Webbing

Add these buckles to webbing (see page 1509) to create your own cinching and tie-down straps.

Light Duty

Sew-On Squeeze-Release Buckle

No-Sew Feed-Through Buckle

Buckles are not load rated. *Sew-on* buckles require at least one end of the webbing to be permanently attached. *No-sew* buckles have a gripper bar on each side that holds webbing in place without sewing.

(1&2) Feed-through buckles are easy to thread and cinch quickly. *Plastic* buckles release by lifting up on the end. *Nickel-plated steel* buckles have a movable center bar for tightening and releasing.

(3) Hinged buckles hold tight upon cinching; push down on the end of the buckle to release.

(4) Squeeze-release buckles can be released with one hand.

(5) Easy-release buckle needs just a pinch on the sides to release, making it ideal for gloved hands.

(6) Spring-loaded clamp buckle has a clamp that holds the webbing. To release, push down on the clamp.

(7) Quick-tight buckles are also known as cam buckles. Lift the cam up to release.

Heavy Duty

Choose these sew-on buckles for higher-tension applications.

(8) Feed-through buckles are easy to thread and cinch quickly. Lift the end of the buckle to release.

(9) Flip-tight buckles, also known as over-center buckles, tighten by flipping and locking the buckle into position.

(10) Quick-tight buckles, also known as cam buckles, tighten the fastest. Push down on the cam and pull strap through the buckle.

(11-13) Ratchet-tight buckles let you apply maximum tension on the webbing but take longer to tighten.

Cut-to-Length Cinching Straps

Polypropylene Webbing and Feed-Through Buckle

EPDM Rubber and Squeeze-Release Buckle

Cut rolls to length and add the included no-sew buckles. Webbing and rubber are black. Buckles are black plastic.

Polypropylene webbing is lightweight, economical, and moisture resistant. Comes with feed-through buckles, which are easy to thread quickly.

EPDM rubber is weather resistant and stretches to hold tarps and bundles tight. Comes with squeeze-release buckles, which can be released with one hand.

●Hook is black plastic-coated steel.

No Sew

A built-in no-sew buckle allows you to quickly attach webbing to the hook.

Style 7 has a squeeze-release buckle with a gripper bar that holds webbing in place.

Styles 8 and ***9*** have a quick-tight buckle, also known as a cam buckle. Push down on the spring-loaded cam and pull webbing through the buckle.

Style 10 has a ratchet-tight buckle for maximum tension.

Chemical-Resistant Polyurethane Tie-Down Cords and Straps

Polyurethane stands up to oil, grease, fuel, ozone, and salt water. *Plastic hooks* protect the contact surface. *Zinc-plated steel hooks* are stronger than plastic and offer some corrosion resistance. *Stainless steel hooks* provide superior corrosion resistance.

Style 13 has a loop end you can cinch around large anchor points.

To Order: Please specify black, blue, orange, red, or yellow.

Fabric-Covered Elastic Tie-Down Cords and Straps

You may know these as Bungee cords and shock cords—they have a woven fabric cover that protects the inner elastic cord from abrasion. Cover is polypropylene unless otherwise stated.

Heavy duty cords provide better abrasion resistance and longer life. ***UV-resistant cords*** are ideal for outdoor use. ***Corrosion-resistant cords*** have a nylon cover and stand up to chlorine and salt water.

Plastic-coated steel and ***plastic hooks*** are nonmarring to protect surfaces. ***Zinc-plated steel hooks*** offer good corrosion resistance. ***Stainless steel hooks*** provide excellent corrosion resistance. ***Aluminum carabiner hooks*** are spring loaded, so they snap closed for a more secure hold than open hooks.

Elastic Cord and Strap

Make your own elastic tie downs by combining this cord and strap with the fittings on this page.

Latex Rubber Cord and Strap with Cover

Also known as Bungee cord, this stretches up to 1.5 times its length. All have a woven polypropylene cover, unless otherwise stated.

UV-resistant cord and ***strap*** are ideal for outdoor use.

Abrasion-resistant cord has a durable nylon cover that stands up to chlorine and salt water.

To Order: Please specify length and color where necessary; continuous lengths greater than the longest length listed are also available.

Hooks for Elastic Cord and Strap

Plastic-coated steel and ***plastic*** hooks protect the contact surface. Color is black.

Stainless steel hooks have excellent corrosion resistance.

Styles 1, 2, and *3* include a clamping wire that must be crimped to the end of the cord to retain the hook.

Style 6 include a collar that grips the cord when pushed into place.

Ball Fittings and Locks for Elastic Cord

Position fittings and locks anywhere along your cord. All are black plastic.

Ball fittings include a clamping wire that must be crimped onto the cord ends to hold fitting in place.

Wheel locks have a slide-release serrated wheel that grips the cord as it is pulled through the lock.

Ball and ***barrel locks*** are spring loaded for quick adjustment.

Warning! **Never use for lifting applications.**

Cinching Straps

With Ratchet-Tight Buckle and Hook

Flip-Tight Buckle

Quick-Tight Buckle

Also known as lashing straps, these load-rated cinching straps have one loose end and one end permanently attached to the buckle. Buckles are zinc-plated steel, unless noted.

Straps with Hook— A hook on the loose end quickly releases from the buckle.

Ratchet-tight buckles let you apply maximum tension on the strap, but take longer to tighten.

Flip-tight buckles, also called over-center buckles, tighten faster than ratchet-tight by flipping and locking the buckle into position.

Quick-tight buckles, also called cam buckles, tighten the fastest. Press down on the spring-loaded cam, pull the webbing, then release the cam to hold.

Straps come in your choice of webbing material: ultra-abrasion-resistant gray nylon or low-stretch brown polyester (unless noted). **To Order:** Please specify material and length: 3, 4, 6, 8, 10, 12, 16, or 20 ft.

2″	1,000	8842T48	12.95	.88	8842T56	15.62	.88

● Work Load Limit is 833 lbs. ♦ Nylon webbing is black; polyester webbing is white. ♥ Buckle is steel with a black-oxide finish.

Hook and Loop Cinching Straps

The hook and loop closure provides a quick way to secure your bundle. Use straps again and again without any loss in gripping strength. Straps have a nickel-plated steel ring unless otherwise stated.

Choose-a-color nylon straps come in black, blue, green, orange, red, and yellow. Ring is plastic. **To Order:** Please specify strap color.

Elastic black nylon straps stretch to hold items tightly. Ring is plastic.

Super-grip black nylon straps have high-strength hook and loop. ***Weather-resistant black polyester*** straps resist water and UV light; they meet ASTM D6193 and MIL-F-21840.

Cut-to-Length Straps

Cinching strap is a 1″ Wd.×15 ft. Lg. piece of black hook and loop and includes 10 no-sew black plastic cinching rings.

Cinching Strap	8846T62	Each	$18.09
Extra Cinching Rings (10/Pkg.)	8846T53	Pkg.	$2.00

Light Duty Cinching Straps

Feed-Through Buckle

Squeeze-Release Buckle

Quick-Tight Buckle

Spring-Loaded Clamp Buckle

Hinged Buckle

Secure your rolls and bundles—just pull the webbing through the buckle to the desired tension.

Plastic Buckles— Have good wear resistance.

Steel Buckles— Are nickel plated. They have serrated edges that hold the webbing after tightening and a finishing tip on the loose end.

Feed-through buckles secure the strap with an adjustable center bar.

Squeeze-release buckles can be opened with one hand.

Quick-tight buckles are also called cam buckles; lift the cam, pull the webbing, then press down the cam to hold.

Spring-loaded clamp buckles release when you press on the clamp.

Hinged buckles hold tight under tension and release when lifted.

To Order: Please specify length: 2, 3, 4, 6, 8, or 12 ft. Please also specify color where necessary.

Elastic Cinching Cords

Cord with Ball Fitting

Adjustable Cord with Locking Fitting

Get the stretch of elastic combined with the ease of a cinching cord. Cords are covered in polypropylene, except 8730T51 is in polyester. Fittings are plastic.

Cords with Ball Fitting— Wrap the loop around your bundle and back over the ball to secure; the cord with the *locking ball fitting* also allows you to adjust the cord length.

Adjustable Cords with Locking Fitting— Pull the cord through the fitting to the proper tension and lock it in place.

Warning! Never exceed work load limits. Never use for lifting applications.

Steel Routing Rings

Also known as bridle rings, these have an open design for easy insertion of wire and cable. Made of zinc-plated steel for good corrosion resistance.

Rings with insert have a greater surface area to prevent kinking and damage to materials. Insert is made of polypropylene. Max. temp. is 190° F.

(A) Standard thread rings mount onto beam clamps and threaded rod hangers.

(B) Wood screw thread rings have a sharp cutting point and mount into wood.

Cable Tie Holders

Add a cable tie and these holders keep your bundles securely in place. All are made of nylon (unless noted). ***Two-way*** holders allow ties to be inserted from one of two opposite sides. ***Four-way*** holders allow ties to be inserted from any side. ***360° swivel*** holder allows you to route cables in any direction.

(D-M) Screw-mount holders do not include screws. *Style M* holds up to five closely spaced bundles.

(N-Q) Anchor-mount holders require a ¼″ drilled hole (unless noted). *Style N* routes cable above the surface in masonry applications. A ridged shaft provides a secure hold. *Style P* routes cable above the panel. *Style Q* routes cable below the panel.

Cable Ties

All ties are made of nylon. Temperature range is –40° to +185° F.

Ties

A

B

C

D

E

F

(A) Standard ties have the most common cable tie design. Also known as zip ties. 7130K45, *K46, K16, K56,* and *K81* are UL listed.

(B) Smooth-body ties provide quiet adjustment. A stainless steel lock in the low-profile head holds the tie securely. The end of the tie is turned up and has a textured surface for quicker and easier tensioning. UL listed.

(C) Double-lock ties have teeth on both sides of the body for a secure hold. UL recognized.

(D) Tight-grip ties are very flexible and conform to the shape of the bundle. This keeps them from moving along the length of the bundle. A tapered tip makes threading easy.

(E&F) High tensile strength and ***extra-high tensile strength*** ties have the highest strength for the most demanding applications.

Cable Tie Tools

A little help from these tools makes tensioning, cutting, and removing cable ties easier.

Standard Installation Tools— Good for occasional use and small jobs.

(A) Pump the trigger to tension the tie; twist the tool to cut the tie.

(B&C) Pump the trigger to reach desired tension and cut the tie. Tension is adjustable.

(D) Squeeze the handles together to tension the tie; pull the cutting lever to cut the tie.

Deluxe Installation Tools— Designed to be used every day. All have adjustable tension and automatically cut ties.

(E) Squeeze the handles together to reach the selected tension. Tension knob has infinite adjustment.

(F) Pump the trigger one time to reach selected tension; release the trigger and the excess tie is ejected. Tension knob has eight settings.

(G) Has two tension levels with a knob that lets you fine tune the tension at each level. Pump the trigger to reach the selected tension. Low-friction internal parts and padded grips provide less hand fatigue.

(H) The barrel rotates 360° for use in awkward and tight spaces without twisting the tool or your wrist. Pump the trigger to reach the selected tension. Tension knob has eight settings and a push-button lock to prevent an accidental change in the setting. The trigger operates with minimal hand force and has soft molded grips. The trigger span is adjustable to provide a comfortable fit for any size hand. Tools also have an anti-recoil cutting mechanism to reduce shock and vibration.

(J) Air-Powered Installation Tool— Ideal for high-production jobs. Minimal effort is required so you avoid repetitive-motion injuries. Just touch the trigger and the tool does the rest. Has eight tension settings. Operates on 100 psi compressed air and includes a 1/8″ NPT male connector.

(K) Removal Tool— Cut away ties without damaging bundles. Safety guards at the tips protect the bundle. The spring-loaded handles rebound after every cut and have cushion grips and a lock. Overall length is 6½″.

Colored Cable Ties

Make identification easy—just look at the color of the tie. All are made of nylon. Temp. range is –40° to +185° F.

(L) Solid Colored Cable Ties— UL recognized and CSA certified. **To Order:** Please specify color: blue, gray, green, orange, purple, red, or yellow; fluorescent blue, fluorescent green, fluorescent orange, fluorescent pink, fluorescent yellow.

(M) Striped Colored Cable Ties— **To Order:** Please specify tie color: orange or green; and stripe color: black, purple, red, white, or yellow.

400-Piece Assortment

Low-Profile Cable Ties

Reduced head height means these ties will fit into spaces that ties with conventional head designs will not. The head is also flexible for a tight fit around bundles. Ties are made of nylon. Temp. range is –40° to +185° F .

Lg.	Max. Bundle Dia.	Tensile Strength, lbs.	Wd.	Pkg. Qty.	White	Per Pkg.	UV-Resistant Black	Per Pkg.

Flush-Fit Cable Ties

Get the snug, contoured fit around pipe, tube, and other round bundles that ties with conventional heads can't provide. Ties are made of nylon. Temperature range is –40° to +185° F for white ties; –40° to +221° F for high-temperature black ties. UL recognized.

Lg.	Max. Bundle Dia.	Tensile Strength, lbs.	Wd.	Pkg. Qty.	White	Per Pkg.	High-Temp. Black	Per Pkg.

Super-Flex Cable Ties

Perforated

Solid

Being more flexible than most other ties makes these ideal for bundling multiple components and irregular-shaped material. Ties are made of nylon. Temperature range is –40° to +185° F for white ties; –40° to +221° F for high-temperature black ties. UL recognized.

Perforated ties are more economical than solid ties. ***Solid*** ties are stronger than perforated ties and have a double locking head to maintain tension under environmental changes and vibration.

Lg.	Max. Bundle Dia.	Tensile Strength, lbs.	Wd.	Meet MIL Spec.	Pkg. Qty.	White	Per Pkg. 1-9	Per Pkg. 10-Up	High-Temp. Black	Per Pkg. 1-9	Per Pkg. 10-Up

Multiple-Bundle Cable Ties

Two Bundle

Three Bundle

Look no further if you want to hold two or three parallel bundles with the same tie—multiple slots in the head let you do just that. Ties are made of nylon. Temperature range is –40° to +185° F. White ties are UL recognized.

● Color is pink.

Detectable Cable Ties

Not only are these ties bright blue so they can be easily seen, they contain a special compound designed to be located by metal detectors and X-ray equipment. Ideal for food processing and pharmaceutical applications. Ties are made of nylon and have a smooth body for quiet adjustment. A stainless steel lock in the low-profile head holds the tie securely. Temp. range is –40° to +185° F.

Lg.	Max. Bundle Dia.	Tensile Strength, lbs.	Wd.	Pkg. Qty.		Per Pkg.

Easy-Removal Cable Ties

A

B

Ideal for bundling and tagging applications where a tie is needed, but can also be quickly and easily removed. Ties are beaded and made of nylon. Temperature range is –40° to +185° F. **To Order:** Please specify color: black, blue, orange, red, white, or yellow.

Style A ties are ideal for tagging. They must be cut to be removed. *Style B* ties are great on fire extinguishers for tamper detection. They can be removed by hand.

★ Tensile strength for white ties is 18 lbs.

Harsh-Environment Cable Ties

Cable ties in a variety of materials have your harsh-environment applications covered.

High-temperature black nylon ties have added chemical stabilizers that permit continuous use at temperatures from –40° to +221° F. Meet UL 94V2 flammability requirements.

Ultra high-temperature brown PEEK (polyetheretherketone) ties have a temperature range of –76° to +500° F and stand up to most chemicals. Meet UL 94V0 flammability requirements.

Fire-retardant white nylon ties have a temp. range of –40° to +203° F. Meet UL 94V0 flammability requirements.

Chemical-resistant and fire-retardant blue Tefzel ties resist most chemicals, solvents, and strong mineral acids as well as weather and moisture. Temp. range is –65° to +302° F. Meet UL 94V0 flammability requirements.

Low-smoke and flame-retardant maroon Halar ties meet requirements as a wire-positioning device in air handling (plenum) spaces for low-smoke density and flammability. Temperature range is –50° to +302° F. Meet UL 94V0 flammability requirements. UL listed.

Dry-environment black polypropylene ties will not become brittle in dry environments. Also withstand the effects of most acids, alcohols, and salts. Temp. range is +40° to +221° F. Meet UL 94VHB flammability requirements.

Weather-resistant black acetal ties are strong and resist UV, moisture, and most chemicals. Temperature range is –58° to +194° F. Meet UL 94HB flammability requirements.

Stainless Steel Harsh-Environment Cable Ties

A

B

Black Nylon Coated Shown

C

D

The best protection in harsh-environment applications.

(A) Reusable Type 304 stainless steel ties secure bundles by folding the body back at the head. They are wider and longer than other ties to handle large bundles.

(B) Reusable black nylon-coated 200/300 series stainless steel ties secure bundles by folding the body back at the head. They also provide added corrosion resistance and protect the surface of your bundles. Temperature range is –50° to +300° F.

(C) Type 316 stainless steel ties have notches on the body that lock into the head. UL listed and CE approved.

Black nylon-coated ties provide added corrosion resistance and protect the surface of your bundles. Temperature range is –50° to +300° F.

(D) Type 316 stainless steel smooth-body ties provide quiet adjustment. A stainless steel lock in the low-profile head holds the tie securely. CE and Coast Guard approved.

Reusable Cable Ties

Whether you plan to change the bundle size or just need a temporary hold, these ties have a convenient release tab for easy removal and reuse. All are nylon. Temperature range is –40° to +185° F.

(A) Side tab ties are the easiest to release in most applications. UL recognized.

(B) Top tab ties are generally the most secure. UL recognized, unless noted.

(C) Flip tab tie acts as both the lock and the release. Flip the tab down to adjust and release; flip it up to lock when desired tension is reached. The high-visibility color allows ties to be easily seen.

Reusable Cut-to-Length Cable Ties

A no hassle way to bundle. Simply wrap around your bundle, cut to length, insert one end through a hole on the other end, and pull tight. Made of 0.56″ wide high-density yellow polyethylene. Comes 500 ft. per roll. Temperature range is –10° to +110° F.

14655T12 ..... **Per Roll** $28.12

Reusable Rubber Cable Ties

Easily secure bundles of rope, cord, hose, and more with these stretchy ties. The head is made of polystyrene for a secure hold. *Note:* Not rated for temperature.

EPDM rubber ties have excellent weather resistance as well as ozone, aging, steam, and water resistance.

Fixed-Loop Cable Ties

If you're working with bundles that are all the same size, these are the ties you need. Ties lock in a fixed-size loop. Also great for use in tagging applications. Ties are made of nylon. Temperature range is –40° to +185° F.

To Order: Please specify color: black, blue, green, or red.

Lg.	Loop Dia.	Tensile Strength, lbs.	Wd.	Pkg. Qty.		Per Pkg.
5″	17/16″	30	0.11″	100	1881T71	$10.03

Hook and Loop Cable Ties

Flexible, reusable, quick and easy to use. Plus they will not damage your bundles.

***Wrap-Around Ties*—**Insert the narrow end through the slit in the wide end and pull to tension.

Colored ties temperature range is 0° to +220° F. **To Order:** Please specify color: black, green, orange, or red.

Black flame-retardant ties meet requirements for use as a wire-positioning device in air handling (plenum) spaces. Also meet UL 94V2 flammability requirements. Temperature range is 0° to +122° F.

***Closed-Loop Ties*—**Just slide your bundle through the center opening and press tie firmly around the bundle to tension. Use hook and loop material on the loose ends to hang and secure around pipe, conduit, and other material. Temperature range is –70° to +200° F.

Fastener-Mount Cable Ties

A

B

Use a screw, nail, bolt, or rivet (not included) to mount these ties to any surface. All are made of nylon. Temperature range is –40° to +185° F. UL recognized.

(B) Smooth-body ties provide quiet adjustment. The low-profile head has a lock for a secure hold.

Panel-Mount Cable Ties

C

D

E

F

Install these in a drilled hole for your panel-mount applications. Made of nylon. Temperature range for white ties is –40° to +185°F; –40° to +221°F for UV-resistant black ties.

(C&D) Anchor-mount ties have a flared end that acts as an anchor for a tight hold.

(E) Anchor-mount with standoff ties are the same as above, but they also have a 1/4″ standoff for clearance from the mounting surface.

(F) Double-lock through-hole mount ties have a dual-lock, button-style head that mounts above or below the surface. Teeth on both sides of the body provide a secure hold.

Mountable Hook and Loop Cable Ties

G

H

Mount ties to your surface, but still have easy access to bundles. Made of nylon. **To Order:** Please specify color: black, gray, or white.

(G) Adhesive-backed ties adhere to any clean, dry surface. Press firmly around the bundle to secure. Temp. range is –20° to +200° F.

(H) Mounting grommet and tensioning buckle ties mount to any rack or surface with 1/4″ fasteners (not included). Cinch the buckle to tension. Grommets are brass; buckles are plastic. Temp. range is –70° to +200° F.

1″ wide ties have one grommet; *2″ wide ties* have two grommets on 7/8″ centers.

3 1/4″ × 5″	6 3/8″	7 5/8″	1710T33	3.37

Easy-Load Routing D-Rings

Spring action makes these D-rings easy to open and close. All are made of polypropylene and have a 1 3/8″ Ht. × 19/32″ Wd. slot for wall mounting. Mounting hole diameter is 1/4″ (fasteners not included). Maximum temperature is 194° F. Color is light gray.

Ht. × Wd. × Lg.	Max. Bundle Dia.		Each
1 13/16″ × 15/16″ × 1 9/16″	1 1/4″	3141T44	$2.14
3 3/8″ × 1 1/8″ × 1 11/16″	1 1/8″	3141T45	2.78
4 7/8″ × 1 1/8″ × 2 1/2″	1 11/16″	3141T46	4.46

Steel Routing Hooks

Wall-Mount Style with Retaining Clip Closed

Beam-Mount Style with Retaining Clip Open

Route multiple runs of wire, cable, hose, and tube. Both styles include a removable locking retaining clip to keep the bundle in the hook.

Wall-mount hook has 1/4″ dia. mounting holes (fasteners not included).

Beam-mount hook accepts flanges up to 1/2″ thick.

Style	Max. Bundle Dia.	Ht. × Wd.		Each
Wall Mount	2″	6″ × 2 1/4″	1717T91	$2.75
Beam Mount	2″	6″ × 2 1/4″	1717T93	4.63

Wire and Strand Guide Eyebolts—*Not for Lifting*

Designed for wire and strand guide applications where corrosion resistance, wear resistance, and electrical insulation are a concern. Made of zinc-plated steel with a pink ceramic eye insert.

Thread Size	(A)	(B)	(C)		Each
6-32	2 1/8"	1 1/2"	3/16"	3011T11	$8.31

10-32	2 3/8"	1 13/16"	1/4"	3011T16	9.18

Adhesive-Backed Cable Holders

Stick holders to any clean, smooth surface to mount, secure, and route cable and wire.

(A&B) Self-closing holders automatically close. Made of gray PVC. Temp. range is +32° to +120° F. Meet UL 94V0 flammability requirements.

(C) Press-in holders have an open top for easy loading. Made of PVC. Meet UL 94V0 flammability requirements. Holders are gray and have a temp. range of +32° to +122° F.

(D) Snap-lock holders push closed. Made of white nylon. Temp. range is –40° to +185° F. Meet UL 94V2 flammability requirements.

(E) Locking-arm holders keep your bundles securely inside. Made of white nylon. Temp. range is –40° to +185° F. UL recognized.

(F) Adjustable-strap holders work like a cable tie and can be released and reused. Strap is 4 1/2" Lg. × 1/4" Wd. Made of black nylon. Temp. range is –40° to +185° F.

(G) Adjustable-loop holders have ratchet-like adjustability and can be released and reused. Made of white nylon. Temp. range is –40° to +185° F. UL recognized.

(H) Fold-over strap holders have a flexible strap that bends over your bundles. Made of steel with a white PVC coating. Temp. range is +32° to +122° F.

69845K61 strap is 9/16" Lg. × 1/8" Wd. 69845K62 strap is 1" Lg. × 3/16" Wd. 69845K63 strap is 1 9/16" Lg. × 3/16" Wd.

● Does not include anchor.

Plastic Loop Clamps

An economical way to secure your lines. Fasteners not included.

Clamps for 1/8" to 1/2" OD have an 11/64" dia. mounting hole; *clamps for 5/8" to 1 1/2" OD* have a 13/64" dia. mounting hole.

Nylon clamps are nonconductive and noncorrosive. All are Type 6/6 nylon. Temperature range is –40° to +185° F. Meet ASTM D-4066. **To Order:** Please specify color: black or white.

Tefzel clamps are used where heat, flammability, and chemical resistance are a concern. Temp. range is –50° to +302° F. Color is green.

Metal Clamps

One-Hole Mount

Two-Hole Mount

Choose from a variety of metal clamps with either one or two mounting holes to secure pipe, conduit, and tubing. Fasteners not included.

Heavy duty clamps are extra thick so they're less likely to bend under heavy loads.

Steel clamps are good where corrosion is not a factor.
Zinc-plated steel clamps offer good corrosion resistance in most environments.
Type 304 stainless steel clamps provide excellent corrosion resistance.
Type 316 stainless steel clamps offer maximum corrosion resistance.
Brass clamps have excellent conductivity and good corrosion resistance.

Metal Loop Clamps

Stronger than plastic loop clamps for securing lines. Fasteners not included.

Galvanized steel clamps have a hot-dipped finish for corrosion resistance. *1/2″ wide clamps* have a 9/32″ dia. mounting hole; *3/4″ wide clamps* have a 13/32″ dia. mounting hole.

Aluminum clamps are more corrosion resistant than galvanized steel. Mounting hole diameter is 7/32″.

300 series stainless steel clamps offer excellent corrosion resistance. Mounting hole diameter is 13/64″.

Sure-Grip Cushioned Loop Clamps

A wedge at the end of the cushion grips the entire circumference of your material to keep it from slipping. Mounting hole diameter is 13/64″ (fasteners not included). Meet MIL-STD 21919.

Neoprene cushion resists ozone, flame, and oil. Color is black. Temperature range is –40° to +212°F. ***Silicone cushion*** offers good resistance to ozone, sunlight, and oxidation. Color is white. Temperature range is –80° to +450°F.

Aluminum clamps are corrosion resistant. ***300 series stainless steel*** clamps offer excellent corrosion resistance.

Also Available: Clamps for 2 1/4″ to 4″ OD in 1/4″ increments. Please ask for 3177T888 and specify material, cushion type, and OD.

Vinyl-Coated Loop Clamps

A vinyl coating dampens vibration and noise while securing your lines. Clamps are corrosion-resistant galvanized steel; coating is black. Temperature range is –30° to +180°F.

1/2″ wide clamps have a 9/32″ dia. mounting hole; *3/4″ wide clamps* have a 13/32″ dia. mounting hole. Fasteners not included.

Also Available: Clamps for 2 1/4″ to 4″ OD in 1/4″ increments. Please ask for 8863T888 and specify width and OD.

Rubber-Cushioned Loop Clamps

The wear-resistant rubber cushion on these clamps provides better vibration and noise damping than a vinyl coating. Mounting hole dia. is 17/64″. Fasteners not included.

EPDM cushion has excellent resistance to ozone, aging, steam, and water. Color is black. Temperature range is –40° to +212°F. ***Silicone cushion*** offers good resistance to ozone, sunlight, and oxidation. Color is red. Temperature range is –80° to +450°F.

Zinc-plated steel clamps offer good corrosion resistance in most environments. ***300 series stainless steel*** clamps provide excellent corrosion resistance.

Multiline Plastic Clamps

10 Slot

Neatly organize multiple lines and save space. All are black polyethylene. Temperature range is –80° to +260° F. Mounting hole dia. is 3/16″ (fasteners not included).

10-slot clamps have a mounting hole on the bottom of each slot. They can be cut between the slots for single- or multiple-line applications.

7- and ***5-slot*** clamps have a mounting hole on each end.

Connectable Clamps

Mount these clamps at any angle for use in single- or multiple-line horizontal and vertical applications. Clamps are made of Type 303 stainless steel and consist of two halves held together by two 1/4″-28 screws. All screws are included.

Stacking clamps have a flat side with a 1/4″-20 threaded hole and a flat side with a 10-24 threaded hole. This allows you to connect to another stacking clamp or to an end clamp.

End clamps have a flat side with a 1/4″-20 threaded hole for mounting to threaded rod or for connecting to the 10-24 threaded hole of a stacking clamp.

Vibration-Damping Clamps

Rubber inserts on these clamps dampen vibration and noise as well as absorb shock. Inserts are black. Fasteners are not included.

Thermoplastic rubber (TPR) insert resists most oils, chemicals, and cleaning solvents. Temperature range is –50° to +275° F. ***SBR rubber insert*** provides better vibration and noise control than thermoplastic rubber insert. They resist abrasion, oxidation, and moisture. Temperature range is –75° to +250° F.

Zinc-plated steel clamps offer good corrosion resistance in most environments. ***Type 304 stainless steel*** clamps provide excellent corrosion resistance.

Weld-Mount Vibration-Damping Clamps for Pressurized Lines

Single-Line Clamp

Double-Line Clamp

Dampen vibration and noise as well as absorb shock when supporting tubing and pipe in hydraulic systems. All clamps have a bottom plate that welds into place. For strut-mount vibration-damping clamps, please see pages 1554-1555.

Polypropylene clamps are available in single- and double-line styles. They handle lines with max. pressure of 2,000 psi. Color is green (unless noted). Temperature range is –22° to +194° F (unless noted).

High-pressure polypropylene clamps are for single lines and can handle max. pressure of 10,000 psi. Color is black. Temperature range is –22° to +212° F.

High-temperature/high-pressure aluminum clamps are for single lines and withstand temperatures of –40° to +500° F. They can handle lines with max. pressure of 10,000 psi.

Clamps with zinc-plated steel hardware have a zinc-plated steel top plate and a steel with zinc-phosphate coating bottom plate.

Zinc-plated steel hardware offers good corrosion resistance in most environments. ***Type 304 stainless steel*** hardware provides excellent corrosion resistance. ***Steel*** hardware is high strength.

Rail-Mount Vibration-Damping Clamps for Pressurized Lines

Great for supporting tubing and pipe in high-pressure hydraulic systems, these clamps dampen vibration and noise as well as absorb shock. All are made of polypropylene and include rail nuts for mounting into rails (sold separately). For strut-mount vibration-damping clamps, please see pages 1554-1555.

Polypropylene clamps are available in single- and double-line styles. They handle lines with max. pressure of 2,000 psi. Color is green (unless noted). Temperature range is –22° to +194° F (unless noted).

High-pressure polypropylene clamps are for single lines and can handle max. pressure of 10,000 psi. Color is black. Temperature range is –22° to +212° F.

Clamps with zinc-plated steel hardware have a zinc-plated steel top plate.

Single-Line Clamp

Double-Line Clamp

Zinc-plated steel hardware offers good corrosion resistance in most environments. ***Type 304 stainless steel*** hardware provides excellent corrosion resistance. ***Steel*** hardware is high strength. ***Type 316 stainless steel*** hardware provides maximum corrosion resistance.

Wall-Mount Clamping Hangers

Secure vertical pipes in sanitation drain applications. All have an adjustable mounting bracket that allows them to be mounted at a variety of heights and widths. Bracket has two 1 1/4"×7/16" mounting slots that accept 3/8" dia. screws. Clamps are corrosion-resistant Type 304 stainless steel and include an adjustment bolt with nut for clamping. For stainless steel screws, please see pages 3146-3151. *Note:* Not rated for work load limit.

Top-Mount Clamping Hangers

A top-mount design lets you use these hangers with eyelet adapters (not included, see page 1542) for threaded rod as well as rigid steel straps (not included, see page 1555). Hangers are made of corrosion-resistant zinc-plated steel and include a bolt and nut to close the hanger.

Rod-Mount Clamping Hangers

No additional fasteners or adapters required—just insert 3/8"-16 threaded rod (not included) directly into these hangers. Hangers can be stacked to hold multiple lines. All are made of plastic. Color is black. Temperature range is –40° to +275° F.

For OD	Work Load Limit, lbs.	Lg. × Ht.		
3/4"	154	1 1/2" × 1 5/8"	3945T71	$1.89

Push-Close Clamping Hangers

For 1/8" to 2" Pipe/Rigid Conduit Size (Shown Closed)

For 2 1/2" to 4" Pipe/Rigid Conduit Size (Shown Open)

No bolts and nuts to hassle with—simply insert material and push these hangers closed. They open with a turn of a screwdriver. A variety of mounting options make these hangers a versatile choice. They have an unthreaded hole for mounting with a fastener, or they can be used with an adapter (sold separately) to suspend them from strut channel or threaded rod (fasteners, strut channel, and threaded rod not included). Hangers are made of gray thermoplastic. Temperature range is –40° to +194° F. Meet UL standards 1565 and 2043.

Optional strut channel adapters allow hangers to mount in 1 5/8" Wd. × 13/16" Dp. and 1 5/8" Wd. × 1 5/8" Dp. strut channel. Made of gray thermoplastic. Temperature range is –40° to +194° F. ***Optional threaded rod adapters*** allow you to suspend hangers from threaded rod. Made of Type 304 stainless steel.

Bottom-Load Clamping Hangers

Also known as conduit hangers, these hangers have the opening at the bottom to make loading and unloading material easier. Close the hanger by inserting a 1/4"-20 bolt and nut (unless noted). Choose from hangers with and without the bolt and nut included. Hangers have an unthreaded hole on top for mounting with a fastener or inserting threaded rod (fastener and threaded rod not included). Hangers are UL listed.

Zinc-plated steel hangers offer good corrosion resistance in most environments. ***Type 304 stainless steel*** hangers provide excellent corrosion resistance.

For threaded rod, see pages 3164-3175.

Versa-Mount Clamping Hangers

Get two mounting options in one hanger—snap these hangers into strut channel or use the threaded hole to insert 3/8″-16 threaded rod (strut channel and threaded rod not included). Hangers push closed for a tight grip on your material. All are made of 6/6 nylon. Color is black. Temperature range is –70° to +250° F.

Vinyl-Covered Clamping Hangers

Avoid the corrosion problems of metal-to-metal contact. These hangers are made of corrosion-resistant zinc-plated steel and have a black vinyl covering on the loop. All include a screw to close the hanger and a 12″ Lg. × 1″ Wd. hanging strip for mounting. Mounting holes are spaced on 7/8″ centers and alternate 9/32″ and 7/32″ diameter (fasteners not included). Temperature range is 0° to 150° F.

Split-Ring Clamping Hangers

Load your material between the two halves of the ring and tighten the included bolts for a snug hold. Hangers are rod mount and have a threaded hole on top for inserting a threaded rod (not included). All meet Fed. Spec. WW-H-171E, Type 25 and Manufacturers' Standardization Society SP-69 and SP-58, Type 12.

Iron hangers have good strength for applications where corrosion is not a factor. ***Zinc-plated iron*** hangers are strong and offer some corrosion resistance. ***Type 304 stainless steel*** hangers provide excellent corrosion resistance.

Vibration-Damping Clamping Hangers

A rubber cushion on these hangers reduces vibration and noise. To close the hanger, insert the head of the included bolt into the slot end for a temporary hold before tightening with a Phillips screwdriver. Hangers have a threaded nut on top for inserting 3/8″-16 threaded rod (not included). All are made of corrosion-resistant zinc-plated steel. Cushion is black. Temperature range is –58° to +230° F.

Weld-Mount Washdown Clamping Hangers

No worries in your wet environments when you use these hangers. All are made of Type 304 stainless steel for excellent corrosion resistance and have either rubber grommets or a plastic insert to dampen vibration and minimize movement. A rod (not included, please see pages 3690-3691) can be welded to the top for hanging. Temperature range is –20° to +230° F.

Rubber grommets grip your material tightly for a secure hold. Color is black.

Plastic insert allows for material expansion and contraction. Color is white.

Warning! **Never exceed work load limits.**

For threaded rod, see pages 3164-3175.

Rod-Mount Washdown Clamping Hangers

Tackle hanging applications in wet environments. Hardware is Type 316 stainless steel for maximum corrosion resistance. Rounded edges reduce contamination and acorn nuts conceal fastener threads. All have a threaded hole on top for inserting threaded rod (not included). Temperature range is –60° to +400° F.

Silicone insert tightly grips your material to minimize movement and vibration. It's FDA compliant and withstands steam cleaning. Color is blue. ***PTFE insert*** allows material to move with thermal expansion and is FDA compliant. Color is white.

Rod-Mount Block-Style Sanitary Clamping Hangers

A smooth contact surface on the insert prevents bacterial build up, making these hangers ideal for sanitary applications. Insert is made of beige Santoprene; hardware is Type 304 stainless steel for excellent corrosion resistance. Temperature range is –40° to +275° F.

Hangers with top plate have a threaded hole on top for inserting 3/8"-16 threaded rod (not included).

Hangers with stacking bolts are designed for running multiple lines using minimal horizontal space. These hangers cannot be mounted independently. They must first be mounted to a hanger with top plate and then connected to another hanger with stacking bolts.

Note: All hangers must be the same length and height. Do not exceed work load limit of individual hanger in multiple hanger applications.

Loop-Style Hangers

A-C **D**

Also known as teardrop hangers, their loop shape makes these hangers just what you need for heavy duty pipe-hanging applications such as suspending fire sprinkler pipe.

(A) Zinc-plated steel hangers offer good corrosion resistance. They have a threaded hole on top for inserting threaded rod (not included). Meet Fed. Spec. WW-H-171E, Type 10 and Manufacturers' Standardization Society SP-69, Type 10. UL listed; FM approved.

(B) Copper-plated steel hangers are compatible with copper pipe and have a threaded hole on top for inserting threaded rod (not included). Meet Fed. Spec. WW-H-171E, Type 10 and Manufacturers' Standardization Society SP-69, Type 10.

(C) PVC-coated steel hangers avoid the corrosion problems of metal-to-metal contact. They have a threaded hole on top for inserting threaded rod (not included). Coating is black. Temperature range is –30° to +200° F. Meet Fed. Spec. WW-H-171E, Type 10 and Manufacturers' Standardization Society SP-69, Type 10.

(D) Type 304 stainless steel hangers offer excellent corrosion resistance. All have an unthreaded hole on top for mounting with a fastener or inserting threaded rod (fastener and threaded rod not included).

Also Available: Type 316 stainless steel hangers. Please ask for 3064T888 and specify pipe size.

Roller Hangers

If you need to allow for material movement and expansion in your hydraulic applications, the roller on these hangers is just what you're looking for. All have an unthreaded hole on top for mounting with a fastener or inserting threaded rod (fastener and threaded rod not included). Hangers are made of steel; rollers are heavy duty cast iron.

Warning! ***Never exceed work load limits.***

For threaded rod, see pages 3164-3175.

Pivoting Hangers

Don't use just any hanger to suspend pipe that carries a flow. These hangers pivot 15° forward and backward to withstand movement and vibration better than conventional hangers. Also known as clevis hangers, they have an unthreaded hole on top for mounting with a fastener or inserting threaded rod (fastener and threaded rod not included). All meet Fed. Spec. WW-H-171, Type 1 and Manufacturers' Standardization Society SP-69 and SP-58, Type 1.

Steel hangers are good where corrosion is not a factor. Hangers for 1 1/16" to 12 3/4" OD are UL listed. ***Zinc-plated steel*** hangers offer good corrosion resistance in most environments. Hangers for 2 7/8" to 8 5/8" OD are UL and C-UL listed and FM approved. ***Type 304 stainless steel*** hangers provide excellent corrosion resistance. Hangers for 2 3/8" to 8 5/8" OD are UL listed and hangers for 1 1/16" to 8 5/8" OD are FM approved.

● Made of Type 316 stainless steel.

Easy-Access Side-Load Hangers

A removable bolt on the side of these hangers allows you to load your material after mounting. The easy-access design also makes changing or replacing sections of existing suspended pipe easier. They have an unthreaded hole on the side for wall mounting and an unthreaded hole on top for mounting with a fastener or inserting threaded rod (fasteners and threaded rod not included).

Zinc-plated steel hangers offer good corrosion resistance in most environments. ***Type 304 stainless steel*** hangers provide excellent corrosion resistance.

Stand-Off Hangers

Eliminate the need for blocking spacers—these hangers hold your material away from the mounting surface. They're a good choice for horizontal pipe runs. All are made of corrosion-resistant zinc-plated steel and include mounting fasteners. UL and C-UL listed.

Note: Not rated for work load limit.

Steel and Stainless Steel U-Bolts

Without Mounting Plate

With Mounting Plate

Choose a U-bolt to suit your application—they're available in a variety of finishes with and without a mounting plate. A mounting plate provides a more secure hold. All U-bolts include two hex nuts.

Zinc-plated steel U-bolts offer good corrosion resistance in most environments. ***Black-oxide steel*** U-bolts have a uniform corrosion-resistant finish and blend into dark backgrounds. ***Hot-dipped galvanized steel*** U-bolts offer better corrosion resistance than zinc-plated steel and black-oxide steel. ***Type 304 stainless steel*** U-bolts provide excellent corrosion resistance.

Also Available: Mounting plates.
For zinc-plated steel, ask for 8875T888 and specify thread size, OD, pipe size, and thread length.
For black-oxide steel, ask for 3201T888 and specify thread size, OD, pipe size, and thread length.
For hot-dipped galvanized steel, ask for 2936T666 and specify thread size and pipe size.
For Type 304 stainless steel, ask for 8889T888 and specify thread size and pipe size.

Warning! **Never exceed work load limits.**

For additional hex nuts, see pages 3186-3192.

Extended-Length Steel and Stainless Steel U-Bolts

Also known as long-tangent U-bolts, the long legs on these are perfect for mounting to thick flanges. They include four hex nuts except Type 316 stainless steel U-bolts for 15/16″ to 4 5/8″ OD, which include two hex nuts. All meet Manufacturers' Standardization Society ANSI/MSS-SP-58, Type 24 except Type 316 stainless steel.

Steel U-bolts are good for general purpose applications where corrosion is not a factor. ***Zinc-plated steel*** U-bolts offer good corrosion resistance in most environments. ***Hot-dipped galvanized steel*** U-bolts offer better corrosion resistance than zinc-plated steel. ***Type 304 stainless steel*** U-bolts provide excellent corrosion resistance. ***Type 316 stainless steel*** U-bolts offer maximum corrosion resistance.

Also Available: Mounting plates.
For zinc-plated steel, please ask for 8875T888 and specify thread size, OD, pipe size, and thread length.
For hot-dipped galvanized steel, please ask for 2936T666 and specify thread size and pipe size.
For Type 304 stainless steel, please ask for 8889T888 and specify thread size and pipe size.
For Type 316 stainless steel, please ask for 29605T888 and specify pipe size.

Stainless Steel U-Bolts with Dual Mounting Plates

Two mounting plates are better than one when it comes to supporting and securing your material. All are made of Type 304 stainless steel for excellent corrosion resistance. Four hex nuts are included.

Square U-Bolts

Their square shape makes these U-bolts perfect for suspending metal channel and duct work. They have 3/8″-16 threads and include two hex nuts and two flat washers.

Zinc-plated steel U-bolts offer good corrosion resistance in most environments. ***Type 304 stainless steel*** U-bolts provide excellent corrosion resistance.

Warning! **Never exceed work load limits.**

For additional hex nuts, see pages 3186-3194.

Polyurethane U-Bolts

Thanks to glass-reinforced polyurethane construction, these U-bolts are nonconductive and abrasion-, chemical-, and UV-resistant. All come with two polyurethane hex nuts. Color is gray. Temperature range is –40° to +150° F.

Rubber-Coated U-Bolts

Reduce wear and vibration—the black rubber coating on these does just that. All include four hex nuts and a black neoprene rubber mounting plate. Temperature range is –67° to +230° F.

Note: Not rated for work load limit.

Hot-dipped galvanized steel U-bolts offer very good corrosion resistance. ***Type 304 stainless steel*** U-bolts provide excellent corrosion resistance.

Clamping U-Bolts

5/16"-18 Thread Size

3/8"-16 Thread Size

Also known as muffler clamps, these U-bolts grip the entire circumference of your material for a secure hold. Two locking nuts are included.

Note: Not rated for work load limit.

Steel U-bolts are good for general purpose applications where corrosion is not a factor. ***Zinc-plated steel*** U-bolts offer good corrosion resistance in most environments. ***Chrome-plated steel*** U-bolts offer very good corrosion resistance. ***Type 304 stainless steel*** U-bolts provide excellent corrosion resistance.

Supports with Strut Channel

Used with the strut channel accessories on pages 1548-1555, the 1 5/8″ Wd. × 13/16″ Dp. strut channel on these supports offers a variety of ways to secure your material. Supports sit on the surface—no mounting with fasteners required. Ideal for rooftop applications.

Block-Style Supports

Reduce vibration and accommodate pipe expansion and contraction. Supports consist of a black polyethylene block with built-in zinc-plated steel strut channel. Temp. range is –40° to +150° F.

O'all Size Lg. × Wd.	Ht.	Work Load Limit, lbs.		
10 3/8″ × 4″	4″	50	3253T43	$24.80
10 3/8″ × 5″	6″	50	3253T44	30.32

Adjustable-Stand Supports

Suited for harsh weather conditions, supports consist of a black polypropylene base and hot-dipped galvanized steel strut channel and threaded rods. Use the threaded rods to adjust the pipe height. Fits up to 2 1/2″ pipe size, unless noted. Temperature range is –30° to +180° F.

Support with strut channel and loop hanger also allows you to suspend material.

Note: Pipe height listed in the table represents the distance the pipe is supported above the surface.

With Strut Channel and Loop Hanger

Strut Channel Lg.	Work Load Limit, lbs.	Base, Lg. × Wd.	Pipe Ht.		
With Strut Channel					
8″	150	10″ × 8″	3 1/2″ to 10″	8487T15	$27.82
12″	300	16″ × 10″	3 1/2″ to 16″	8487T16★	58.25
With Strut Channel and Loop Hanger					
12″	300	16″ × 10″	3″ to 10″	8487T18	68.07

★ Fits up to 3 1/2″ pipe size.

Bolt-Down Adjustable Pipe Supports

Set supports at the height you need—cut 2″ pipe size steel extension pipe (sold separately on page 39) approx. 4″ shorter than desired height. Apply tack welds to the cup on the support and the cup on the included base and insert extension pipe. Then, mount the base to the floor. Fine-tune the height using the adjustment screw on the support.

Supports are galvanized steel. Adjustment screw has a 3″ height range; minimum height is 7″.

Bases are ¼″ thick galvanized steel and have 9/16″ dia. mounting holes (fasteners not included, see page 3149 for anchor bolts).

4″ Lg. × 6″ Wd. bases have two mounting holes; *8″ Lg. × 8″ Wd.* bases have four mounting holes.

Also Available: Stainless steel supports. Please ask for 8427T888 and specify style and pipe size.

Saddle-Style Supports

The saddle comes in direct contact with half of the pipe's circumference for secure support. A black neoprene pad for holding PVC, ductile iron, and steel pipe is included. Temperature range is –70° to +200° F.

For OD	For Pipe Size	Work Load Limit, lbs.	Saddle Wd.	Saddle Thick.	Base, Lg. × Wd.

Bolt-On Flange-Style Supports

Bolt directly to the flange on Class 125 pipe (fasteners not included). Flange plate on support is ¼″ thick.

Note: To ensure a correct fit, refer to the flange plate bolt hole center-to-center in the table.

For OD	For Pipe Size	Work Load Limit, lbs.	Flange Plate Bolt Hole Ctr.-to-Ctr.	Flange Plate Bolt Hole Dia.	Base, Lg. × Wd.

12 3/4″	12″	10,000	1/2″	8″ × 8″	8427T76	173.92

Warning! Never exceed work load limits.

About Cable and Hose Carriers

Carriers are designed to guide, contain, and protect cable and hose during machine movement as well as reduce safety hazards to operators. They are ideal for use between fixed and moving portions of machines. When installing, evenly distribute cable and hose weight within the carrier.

Our flexible multiconductor cable on pages 803-806 is ideal for use with carriers.

To select the correct carrier size and length, use the following guidelines:

1. Select a carrier with an interior height (A) that's larger than the largest diameter cable or hose.
2. Select a carrier with an interior width (B) that's larger than the sum of the cable and hose diameters laid side by side.
3. Ensure the bend radius (R) is greater than the minimum bend radius of the cables and hoses.
4. Ensure the loop height (H) is less than the available space.
5. Determine the required carrier length using the following formula:

$$\frac{\text{Loop Length (L)}}{12''} + \tfrac{1}{2}\ \text{Max. Travel (T)}$$

Snap-Together Cable and Hose Carriers

Snap-together links make length adjustment quick and easy. Lengths can be joined by hand but require a screwdriver for easier disassembly. Carriers are made of black glass-filled nylon. Operating temperature is –40° to +266° F. Compatible with this style of Igus carriers.

Open carriers prevent heat buildup, allow debris to pass through, and keep cable and hose visible at all times.

Feed-through carriers require cable and hose to be threaded through the entire length.

Hinged carriers have snap-on cross bars that allow access at any point along the length and make it easy to install cable and hose from the top.

Enclosed carriers protect cable and hose from damage caused by dirt, chips, and sharp debris. Their snap-on cross bars allow access at any point along the length and make it easy to install cable and hose from the bottom.

To Order: For carriers, please specify length: 1, 3, or 6 ft.

Mounting brackets are black glass-filled nylon. Fasteners for mounting the brackets to the surface are not included.

Compact Snap-Together Cable and Hose Carriers

When space is tight, you need low-profile carriers. Snap-together links make length adjustment quick and easy. Join lengths by hand; use a screwdriver for disassembly. All are black glass-filled nylon. Operating temp. is –40° to +266° F. Compatible with this style of Igus carriers.

Feed-through carriers require the cable and hose to be threaded through the entire length. ***Pull-open top carriers*** give you easy access and allow you to install cable and hose from the top.

To Order: For carriers, please specify length: 1, 3, or 6 ft.

Mounting brackets are made of black glass-filled nylon and have a built-in plate for strain relief. Fasteners for mounting the brackets to the surface are not included.

Dura-Guard Cable and Hose Carriers

Bands of Type 304 stainless steel surround flexible black nylon to minimize damage from dirt, chips, and hot, sharp debris. The modular links are held together by removable rivets for easy length adjustment and access to cable and hose. Plus, lengths can be easily joined. Operating temperature is –40° to +266° F. Compatible with this style of Kabelschlepp carriers.

To Order: For carriers, please specify length: 1 or 3 ft.

Mounting brackets are cast aluminum and include fasteners.

Also Available: Repair kit with two top and bottom Type 304 stainless steel pieces, two center nylon pieces, and four connecting rivets. Please ask for 5608K888 and specify interior height (A) and bend radius (R).

For information about cable and hose carriers, see page 1538.

Heavy Duty Cable and Hose Carriers

Made of zinc-plated steel, these carriers offer high strength and corrosion resistance. Their open design prevents heat buildup, allows debris to pass through, and keeps cable and hose visible at all times. Twist-out aluminum crossbars allow you to install cable and hose from the top and access it at any point along the length of the carrier. Operating temperature is –40° to +266° F. Compatible with this style of Kabelschlepp carriers.

To Order: For carriers, please specify length: 1 or 5 ft.

Determine the required carrier length using the following formula:

$$\frac{\text{Loop Length (L)}}{12''} + \tfrac{1}{2}\ \text{Max. Travel (T)}$$

Mounting brackets can mount inside or outside the carrier frame. All are made of zinc-plated steel. Each set includes two brackets for the fixed end, two brackets for the moving end, and fasteners.

Smooth-Travel Cable and Hose Carriers

A flexible one-piece design offers smooth, quiet travel for vibration-sensitive applications. There are no links or hinges, making the carriers suitable for Class 10 clean room use. Cable and hose are pressed through the top into the interior. Carriers can be cut with a utility knife. Made of polypropylene. Color is black. Compatible with this style of Kabelschlepp carriers. Operating temp. is –40° to +85° F.

Mounting brackets are black polypropylene and have a built-in plate for strain relief (unless noted). Fasteners for mounting the brackets to the surface are not included.

● Do not have a built-in plate for strain relief.

Any-Which-Way Snap-Together Cable and Hose Carriers

Capable of flexing up to 380° in any direction, these round carriers are ideal for robotic arms. Links press in for loading and unloading cable and hose. Their snap-together links make length adjustment quick and easy. Lengths can be joined by hand, but use a screwdriver for easier disassembly. All carriers are made of black glass-filled nylon. Operating temperature is –40° to +266° F. Compatible with this style of Igus carriers.

Note: Extra length will be needed to accommodate rotation.

To Order: For carriers, please specify length: 1, 3, or 6 ft.

Mounting brackets are black glass-filled nylon. Fasteners for mounting the brackets to the surface are not included. *End brackets* have teeth for strain relief. *Supporting brackets* are used as needed along the length of the carrier.

To Order: Please specify end or supporting bracket.

Cable and Hose Trays

Instead of pulling your cable and hose through conduit or wireway, just lay it in these trays. Trays and accessories are made of aluminum except hanging clamps and hanging bars, which are made of steel.

Trays

Trays offer excellent ventilation. Plus, they have the strength to support up to 284 lbs. per foot (based on a tray support every 8 feet). Usable depth is 3″. All shapes include two straight connectors (except horizontal tees, which include four connectors) for joining sections together.

To Order: For 90° vertical bends, please specify: inside or outside.

Also Available: Horizontal crosses. Please ask for 30065T888 and specify width.

Optional Accessories

All accessories include mounting hardware (unless otherwise stated). Threaded rod is not included, please see pages 3164-3175.

Hanging clamps attach to sides of tray section to suspend it from ½″-13 threaded rod using two hex nuts (not included) on each clamp.

Hanging bars allow trays to rest on a slotted strut channel suspended from ½″-13 threaded rod.

Also Available: Center-mount hangers leave sides open for easy loading and unloading. Please ask for 30065T666 and specify tray width.

Easy-Form Cable and Hose Trays

Create trays that suit your needs—even curves, drops, and crosses. All you need are trays, accessories, a pair of bolt cutters, and a wrench.

Black-painted steel blends into dark backgrounds. ***Zinc-plated steel*** offers good corrosion resistance in most environments. ***Type 316 stainless steel*** provides maximum corrosion resistance.

Trays

Made of wire mesh, trays are easy to cut, bend, and connect. Each package contains two 78″ long sections of tray and two straight connectors for joining the two sections in a straight line. Trays are UL classified, CSA certified, and CE approved.

To Order: For steel trays, please specify finish: black painted or zinc plated.

★ Not available in black-painted steel.

Warning! ***Never exceed work load limits.***

For threaded rod, see pages 3164-3175.

Anchors for Threaded Rod

You can count on these anchors to securely hold your threaded rod (not included). Anchors are made of zinc-plated steel.

Note: Work load limit is for the anchor only. Mounting surface and hardware will affect the ultimate work load.

Anchors for steel have a sharp cutting point for mounting directly into steel. Use a drill along with the drive socket (sold separately) for installation.

Anchors for wood require a drill along with the drive socket (sold separately) for installation.

Anchors for concrete require a hole drilled by an ANSI 1/4″ masonry bit. Use a rotary hammer or hammer drill along with the drive socket (sold separately) for installation.

Brackets for Threaded Rod

Here they are—the brackets you need to hang threaded rod at a fixed distance from the mounting surface. Use a nut to secure the threaded rod in the brackets. Fasteners, nuts, and threaded rod are not included.

Note: Work load limit is for the bracket only. Mounting surface and hardware will affect the ultimate work load.

Shelf brackets are ideal for hanging threaded rod from walls. ***Angle brackets*** let you hang threaded rod from beams and joists. Use a lag screw or bolt to secure the bracket to the surface.

Steel brackets are good for general purpose applications where corrosion is not a factor. ***Zinc-plated steel*** brackets offer good corrosion resistance in most environments.

Also Available: Type 304 stainless steel brackets. For shelf brackets, please ask for 2971T888 and specify height (A). For angle brackets, please ask for 3053T888 and specify thread size.

★ Work load limit for a lag screw mounting into wood. Work load limit is 1,150 lbs. when bolt mounts into steel.
● Work load limit for a lag screw mounting into wood. Work load limit is 2,000 lbs. when bolt mounts into steel.

Warning! ***Never exceed work load limits.***

For threaded rod, see pages 3164-3175.

Vibration and Sound Dampers for Threaded Rod

Reduce vibration and sound on air-handling units, pipe, and duct work suspended from threaded rod. Dampers have a neoprene mount and zinc-plated steel housing. Two lengths of threaded rod and two hex nuts are required for installation (threaded rod and hex nuts not included). Not rated for temperature.

Note: Work load limit is for damper only. Mounting surface and hardware will affect the ultimate work load limit.

Dampers without spring provide sound control under most conditions.

Dampers with spring not only have a mount for sound damping, they have a powder-coated steel spring to dampen vibration.

Without Spring *With Spring*

I-Beam Clamps for Threaded Rod

Attach these clamps directly to the flange of an I-beam and utilize the threaded hole to insert threaded rod (not included).

Malleable iron, carbon steel, and ***spring steel*** clamps have good strength for applications where corrosion is not a factor. ***Zinc-plated steel*** clamps offer good corrosion resistance in most environments.

Zinc-plated malleable iron clamps offer some corrosion resistance. ***Type 304 stainless steel*** clamps offer excellent corrosion resistance. ***Type 316 stainless steel*** clamps provide maximum corrosion resistance. Clamps may be mildly magnetic.

Bottom Flange Mount Clamps

Designed for use on the bottom flange of beams. A securing bolt is included.

(A, B, C&G) Clamps include a locknut to prevent loosening.

Style B are UL listed and FM approved. Also meet Fed. Spec. WW-H-171, Type 23 and Manufacturers' Standardization Society MSS-SP-69, Type 23.

(D, E&H) Clamps also have a threaded hole on the side for supporting a hanger or routing ring.

(F) Clamp swivels as well as pivots up to 45° on angular mounts to ensure threaded rod hangs straight, even on angled beams.

Angled-Body Clamps for Threaded Rod

You've found them—clamps that support threaded rod on purlins as well as I-beams that have 45° or 90° lips (threaded rod not included, see pages 3164-3175). Also known as purlin clamps, they attach to the lower flange of the beam with the included securing bolt and nut. UL listed and FM approved. Meet Fed. Spec. WW-H-171, Type 23 and Manufacturers' Standardization Society MSS-SP-58, Type 23.

Malleable iron clamp is for applications where corrosion is not a factor. ***Zinc-plated malleable iron*** clamp offers some corrosion resistance.

Accepts Thread Size	Max. Lip Size 45°	Max. Lip Size 90°	Work Load Limit, lbs.		Each
Malleable Iron					
3/8"-16	2"	1 1/2"	400	11365T18	$8.52
Zinc-Plated Malleable Iron					
3/8"-16	2"	1 1/2"	400	11365T19	10.95

Double-Grip Adjustable I-Beam Clamps for Threaded Rod

Not only do these clamps get a secure grip on each side of the beam, they have an adjusting screw to accommodate a range of flange widths. Their threaded socket-style adapter hangs beneath the center of the beam to support threaded rod (not included, see pages 3164-3175). Clamps and adapters are malleable iron; adjusting screws are carbon steel and include two nuts and washers. Meet Fed. Spec. WW-H-171, Type 30 and Manufacturers' Standardization Society MSS-SP-58, Type 30.

Accepts Thread Size	Fits Flange Wd.	Max. Flange Thick.	Work Load Limit, lbs.		Each

7/8"-9	2 3/8" to 7"	9/16"	1,365	3266T52	13.79

Double-Grip I-Beam Clamps with Hanging Bolt

Shown w/Socket-Style Adapter and Threaded Rod (Not Included)

Suspend threaded rod, wire rope, and chain (none included) from beneath the center of I-beams by sliding the hanging bolt through an eye nut, socket, wire rope thimble, or chain link (none included, see page 1542 for eyelet adapters). The clamps grip each side of the beam for a secure hold. All meet Manufacturers' Standardization Society MSS-SP-69, Type 21 for galvanized steel and MSS-SP-58, Type 21 for stainless steel.

Hot-dipped galvanized steel clamps offer good corrosion resistance. ***Type 304 stainless steel*** clamps provide excellent corrosion resistance.

★ Not for use with thin-wall (EMT) conduit. ▲ Max. flange thick. is 5/8".

Swiveling I-Beam Clamps for Pipe and Conduit

Bolt-and-Nut Close

Squeeze Close

Once attached to the beam, the swiveling hanger on these clamps lets you position pipe and conduit at any angle. No drilling is required.

Bolt-and-nut close clamps include a bolt with nut to close the hanger. They also have a 1/4"-20 threaded hole on the side to support a routing ring or additional hanger. Made of zinc-plated steel. A securing bolt is included.

Squeeze-close clamps are hammered onto the flange of the beam and need only a quick squeeze to close. Made of finished spring steel.

Warning! **Never exceed work load limits.**

High-Capacity Beam-to-Beam Clamps

Suspend one I-beam from another. Clamps grip the flanges of two beams for a secure connection at a range of angles. Ideal for lifting equipment, creating overhead conveyor systems, and supporting structural applications. Made of corrosion-resistant zinc-plated steel. Securing bolts are included.

Fits Flange Wd.	Fits Flange Thick.	Work Load Limit, lbs.		Per Set
3″ to 7″	3/16″ to 3/4″	6,744	3008T41	$275.84

Double-Grip Adjustable I-Beam Clamps

Whether you use them for pulling and lifting or as anchor points for hoists, these clamps grip each side of the beam to create a secure hold and to position the shackles, suspension bars, and eyes beneath the center of the beam. They adjust to fit a range of flange widths and thicknesses and can be used on flat and tapered beams.

Low-Profile Adjustable Clamps

Ideal for low-headroom areas. Two bolts with spacers grip each side of the beam. The shackle can pivot up to 45° in lifting and suspending applications. Made of zinc-plated and painted steel.

Fits Flange Wd.	Max. Flange Thick.	(A)	Work Load Limit, lbs.		Each
4″ to 8″	1 3/4″	2″	5,000	8821T11	$192.08
8″ to 12″	1 3/4″	2″	5,000	8821T12	219.98
12″ to 16″	1 3/4″	2″	5,000	8821T13	237.25
16″ to 20″	2 1/2″	2″	5,000	8821T14	270.17

Quick-Adjust Clamps

A T-handle provides quick and easy attachment and removal, and an adjustment screw accommodates a range of flange widths. Made of steel.

(1) Clamps with suspension bar are the economical choice. The built-in suspension bar is ideal for holding hooks. *Note:* The work load limit is applicable only at 0° from vertical.

(2) Clamps with shackle pivot for applications that may include sway. *Note:* The work load limit is applicable 0° to 15° from vertical, unless noted.

(3) Clamps with universal eye are ideal for lifting with slings. The clamps grip both the flange and the web portion of the beam. *Note:* The work load limit is applicable 0° to 90° from vertical.

● Not designed for pulling applications.
♣ Work load limit is applicable only at 0° from vertical.

Clamps for Flat Steel I-Beams

Join the flanges of two flat steel beams without welding or drilling. Also ideal for hanging threaded rod from flat structures.

Note: Do not use on tapered flanges.

Zinc-plated malleable iron clamps offer good corrosion resistance in most environments. ***Hot-dipped galvanized malleable iron*** clamps offer better corrosion resistance than zinc-plated malleable iron.

Clamping Range	Bolt Size	Work Load Limit, lbs.	Zinc-Plated Malleable Iron	Each	Hot-Dipped Galvanized Malleable Iron	Each

Pipe and Scaffolding Clamps with Threaded Fasteners

Super Grip

Quick Install

Secure Nut

Clamp on to pipe and truss and utilize the included vertical bolt to hang lighting fixtures and other equipment. Clamps are made of aluminum.

Super-grip clamps are grooved on the inside for a superior grip. The vertical bolt can be removed to insert threaded rod (not included). Clamps have a black anodized finish and include a securing bolt. Bolts are zinc-plated steel (unless noted).

Quick-install clamp has a large T-handle that makes securing quick and easy. The vertical bolt is zinc-plated steel and can be removed to insert threaded rod (not included).

Secure-nut clamp has M12×50 mm steel bolts and wing nuts. Simply remove and then tighten wing nut to mount equipment.

■ Bolts are Type 316 stainless steel.

Adjustable Wire Rope Hangers

Save valuable time and effort in hanging applications. Hangers have a convenient steel snap-hook fitting at the top that can be used to create a choker loop around a supporting structure. At the other end is a steel lock that allows you to thread the included 7×7 wire rope through and lock it in place. To adjust the length of the wire rope or completely release it, insert the included release tool or a flat head screwdriver into the lock. Wire rope is zinc-plated steel and offers good corrosion resistance in most environments.

Optional cable cutter (sold separately) can be used to trim excess wire rope.

Wire Rope Lg., ft.	Wire Rope Dia.	Work Load Limit, lbs.		Each

Optional Cable Cutter ..... 39615A81 Each $75.00

Warning! ***Never exceed work load limits.***

About Strut Channel and Accessories

The U-shaped design of strut channel provides connection points in suspending and routing applications. Strut channel can also be used to build structures such as racks.

Slotted-hole and ***round-hole strut channel*** allow connections to the channel opening, as well as connections to the back of the channel without drilling.

Solid strut channel allows connections to the channel opening.

Strut channel and accessories are available in a variety of materials:

Zinc-plated steel offers good corrosion resistance in most environments.

Primed steel, also known as galvannealed steel, is ready for custom painting with no prep work required. It provides some corrosion resistance and can be welded.

Painted and ***choose-a-color steel*** are ideal for color coding your system. The powder-coated finish provides rust protection.

Aluminum is lightweight, yet strong and corrosion resistant.

Galvanized steel has a hot-dipped zinc coating for better corrosion resistance than zinc-plated steel.

Type 304 stainless steel offers excellent corrosion resistance.

Type 316 stainless steel provides maximum corrosion resistance.

Fiberglass (polyester) is nonconductive and maintenance free with good corrosion resistance. Compatible with metal accessories. Temperature range is –35° to +200°F.

Strut Channel

Slotted Hole

Solid

Save time—we have the length you need already cut. Strut channel is great for supporting conduit, pipe, electrical components, and duct.

Slotted-Hole Channel— Holes are 9/16″ Wd.×1 1/8″ Lg. except on fiberglass, which has 3/8″ Wd.×1″ Lg. holes. All holes are spaced on 2″ centers.

Steel and ***Stainless Steel Channel—*** *1 5/8″×1 5/8″* channel is 0.105″ thick and *13/16″×1 5/8″* channel is 0.079″ thick.

Aluminum Channel— *1 5/8″×1 5/8″* channel is 0.08″ thick and *13/16″×1 5/8″* channel is 0.064″ thick.

Fiberglass Channel— Wall thickness is 0.13″ for each side and 0.21″ for the bottom. Color is gray.

6′8″ length channel is for use with beams spaced 6 ft. apart. The length allows 4″ on each end to attach the channel to the beam.

To Order: For 1- to 4-ft. lengths, please specify length: 1, 1 1/2, 2, 3, or 4 ft.

To Order: For choose-a-color steel, please specify color: black, red, white, or yellow.

Strut Channel with Mounting Plates

Mount lengths of strut channel quickly and easily to walls, beams, and other lengths of strut channel. All channel is 0.105″ thick. Mounting plates have two 9/16″ dia. mounting holes (fasteners not included).

Solid Channel— The mounting plate is 1/4″ thick. Mounting holes are spaced on 3″ centers.

Solid Double Channel— Two lengths of channel are welded back-to-back to provide connection points on the top, bottom, and both sides. The mounting plate is 3/8″ thick. Mounting holes are spaced on 4 5/8″ centers.

To Order: For choose-a-color steel, please specify color: black, red, white, or yellow.

Curved Strut Channel

Top/Bottom Opening

Inside Opening

Outside Opening

Curved 115°, this zinc-plated steel channel lets you create continuous runs without corners. All channel is 1 5/8″×1 5/8″ and 0.105″ thick.

Top/bottom opening channel is great for use in light duty conveying and other trolley applications. For trolleys and brackets, see page 1552.

Inside opening and ***outside opening*** channel is great for electrical runs around columns, along curved structures, and for transitioning from walls to ceilings.

Style	Length, ft.	Radius, ft.		Each
Top/Bottom Opening	6	3	3147T1	$95.05
Inside Opening	6	3	3147T2	79.21
Outside Opening	6	3	3147T3	79.21

For information about strut channel and accessories, see page 1546.

Double Strut Channel

Slotted-Hole Back-to-Back

Solid Back-to-Back

Slotted-Hole Side-to-Side

Two lengths of strut channel joined, either back-to-back or side-to-side, provide multiple connection points.

Slotted-Hole Channel—Holes are 9/16″ Wd.×1⅛″ Lg. (unless noted). All holes are spaced on 2″ centers.

Steel and ***Stainless Steel Channel***—*3¼″×1⅝″* is 0.105″ thick; *1⅝″×1⅝″* is 0.079″ thick.

Aluminum Channel—*3¼″×1⅝″* is 0.08″ thick; *1⅝″×1⅝″* is 0.064″ thick.

Fiberglass Channel—Wall thickness is 0.13″ for each side and 0.21″ for the bottom. Color is gray.

To Order: For 1- to 4-ft. lengths, specify length: 1, 1½, 2, 3, or 4 ft.

To Order: For choose-a-color steel, specify color: black, red, white, or yellow.

Telescoping Round-Hole Strut Channel

Channel

Tube

Slide the channel into the tube (both sold separately) to create a length-adjustable strut channel. Ideal for applications where requirements such as table or conveyor height may change over time. Channel and tube are made of 0.105″ thick steel and have 9/16″ dia. holes spaced on 1⅞″ centers.

Channel is 1⅝″×1⅝″. Holes are opposite the channel opening.

Tube is 1⅞″ square. Holes are on all sides. Can also be used with any 1⅝″×1⅝″ slotted channel.

Optional locking pin (sold separately) is for adjustments when strut channel is used with tube. Made of zinc-plated steel.

Post Bases for Strut Channel

Single Channel 4″×6″ Plate Standard Post

Single Channel 6″×6″ Plate Standard Post

Single Channel Polyurethane

Double Channel Offset Post

Create a solid foundation when you mount these bases to the floor to support upright 1⅝″×1⅝″ strut channel (not included). Mounting holes are spaced on 4¼″ centers (unless noted). Mounting bolts are not included. *Note:* Base height does not include plate thickness.

Steel and ***stainless steel*** bases with 6″×6″ plates have four ¾″ dia. mounting holes. Bases with 4″×6″ plates have two ¾″ dia. mounting holes. ***Polyurethane*** bases are compatible with fiberglass strut channels. They have four 7/16″ dia. mounting holes. Color is gray.

To Order: For choose-a-color steel, please specify color: black, red, white, or yellow.

For information about strut channel and accessories, see page 1546.

I-Beam Clamps for Strut Channel

Strut channel and I-beam are not included.

Bottom Flange-Mount Clamps

(1) Square-bend clamps consist of mounting plates that grip the beam flange and square U-bolts that cradle the channel. Four hex nuts are included.

(2) Slide-on clamps have a bottom gripping plate for the rolled lip of the strut channel to rest on. A bolt to secure the clamp to the beam flange and a locknut to prevent loosening are included. Clamps also have a threaded hole on the bottom for supporting threaded rod.

(3) Pass-through clamp has a bolt for securing to the beam flange and a locknut to prevent loosening. The strut channel feeds through and is supported by the body of the clamp. Clamp also has a threaded hole on the bottom for supporting threaded rod.

(4) Low-profile clamps twist into the channel and secures to the beam flange with a bolt and ½″-13 channel nut (not included).

Side-Mount Clamps

Mount strut channel inside beam flanges. The set includes one stationary and one adjustable clamp that go into each end of the channel. Studded tops hold them securely against the flange. Clamps are 1⅝″×1⅝″ and made of zinc-plated steel. *Note:* Channel must be cut to the size of the opening minus 1½″.

For Strut Channel	Work Load Limit, lbs.		Per Set
1⅝″×1⅝″	500	1815T15	$11.23

Casters for Strut Channel

Add mobility to structures built with strut channel. Casters are zinc-plated steel and have a polypropylene stem that easily slides into 1⅝″×1⅝″ (0.105″ and 0.079″ thick) slotted channel (not included). A bolt and washer are included for easy attachment. All have a ⅜″ dia. solid axle. Leg is 3/32″ thick. The wheel is black solid rubber with plain acetal wheel bearings. Durometer is 70A to 85A.

Swivel casters have double-ball swivel bearings.

▲ Made of 0.105″ thick zinc-plated steel.

Warning! ***Never exceed work load limits.***

For information about strut channel and accessories, see page 1546.

Brackets, Braces, Hinges, and Plates for Strut Channel

A variety of accessories lets you connect strut channel (not included) to each other as well as to other structures. All fit 1⅝″ wide strut channel.

Steel and ***stainless steel*** accessories are ¼″ thick and have 9⁄16″ dia. mounting holes (fasteners not included).

Fiberglass accessories are ⅜″ thick and have 7⁄16″ dia. mounting holes (unless noted). Fasteners not included.

To Order: For choose-a-color steel, please specify color: black, red, white, or yellow.

Square Nuts—*Zinc-Plated Steel*

Also known as insert nuts, these nuts convert slotted holes to threaded round holes and keep them centered.

Accepts Thread Size		Each
1/4″-20	2233K15	$1.23
3/8″-16	2233K16	1.30
1/2″-13	2233K17	1.41
5/8″-11	2233K18	1.90

Slot Nut—*Zinc-Plated Steel*

Slip this nut through slotted holes and turn it 90° to lock in the slot.

Accepts Thread Size		Each
3/8″-16	2233K14	$0.69

Tab-Lock Nuts—*Steel*

A plastic tab on these nuts fits tight against the lip of the channel to keep it from slipping through.

Accepts Thread Size		Each
1/4″-20	2233K11	$0.98
3/8″-16	2233K12	1.00
1/2″-13	2233K13	1.10

Clamping Nut—*Malleable Iron*

Nut connects two slotted channels to create back-to-back double channel. One nut is required every foot. Minimum of two nuts.

Min. Slot Lg.	Min. Slot Wd.		Each
9/16″	7/8″	2233K19	$2.00

For information about strut channel and accessories, see page 1546.

Stud Nuts for Strut Channel

The stud on these nuts makes connections simple—no separate fasteners required. Nuts have serrated grooves that grip the lip of 1⅝″×1⅝″ strut channel (not included) and a spring to hold them securely in place. They are made of zinc-plated steel.

Stud Thread Size	7/8″ Stud Lg.	Each	1 1/8″ Stud Lg.	Each	1 3/8″ Stud Lg.	Each

Washers for Strut Channel

Standard

No Spin

Slot Adapter

Scissor Action

Twist Lock

Use with hex nuts (except scissor-action style) to connect threaded rod to slotted strut channel in a variety of support-system applications (hex nuts, rod, and channel not included). Washers fit all 1⅝″ wide strut channel.

No-spin washers are notched on two sides to securely grip the channel and stay in place.

Slot-adapter washers have a round punched hole to keep hardware centered in the channel when mounting slotted channel directly to structural elements.

Scissor-action washers are designed to attach anywhere along the rod. Great for adding to existing threaded rod installations. Eliminates the need for hex nuts and washers.

Twist-lock washers consist of a threaded strut channel nut and washer all in one.

Trolleys and Brackets for Strut Channel

Use with straight or curved 1⅝″ Wd.×1⅝″ Dp. (or deeper) strut channel (not included) to create conveyance systems and runs in any configuration.

Trolleys

All trolleys have 1 3/16″ dia. wheels (unless noted) with stainless steel wheel bearings.

Style 1 trolleys have a horizontal plate with holes for hanging threaded rod and eyebolts. *Plate with one hole* has a 9/32″ dia. center hole. *Plate with three holes* has a 9/32″ dia. center hole and two 9/32″×9/16″ slotted holes. Holes are spaced on 1″ centers.

Style 2 trolley has a horizontal plate with a 3/4″ dia. eyebolt plus two 9/32″×9/16″ slotted holes for hanging threaded rod. Holes are spaced on 1″ centers.

Style 3 trolleys have a vertical plate with holes for attaching hooks and shackles. *Plate with one hole* has a 9/16″ dia. center hole. *Plate with three-holes* has three 9/16″ dia. holes on 15/16″ centers.

	Cap., lbs.	Lg.×Wd.×Ht.	(A)	No. of Holes	Sets of Wheels		Each

♥ Wheel diameter is 1 1/8″.

Brackets—*Zinc-Plated Steel*

Hanging/ Connecting Bracket

Fasteners not included.

Hanging bracket mounts outside the strut channel to allow channel to hang without disrupting trolley movement. Bracket has a 9/16″ dia. top hole and two 7/16″ dia. side holes for securing channel.

Hanging/connecting bracket is the same as the hanging bracket but longer, which makes it capable of joining lengths of strut.

Bracket	Lg.×Wd.×Ht.	Cap., lbs.		Each
Hanging	1 5/8″×1″×3 3/4″	1,200	3626T41	$5.35
Hanging/Connecting	3 1/2″×1″×3 3/4″	2,500	3626T42	8.16

Bolt-Down Strut-Mount Clamps

Easily secure tubing to all 1⅝″ wide strut channel (not included). Clamps are made of zinc-plated steel and have one 1/4″ dia. mounting hole (bolt not included).

Note: Not rated for work load limit.

Strut-Mount Hangers

4

5

6

Slip these hangers onto the lip of top-opening strut channel and quickly attach chain, wire rope, conduit, and threaded rod (none are included). Hangers are made of spring steel and fit all 1⅝″ wide strut channel.

	Hole Size	Fits OD/ Thread Size	Work Load Limit, lbs.		Each

6	———	1/2″ to 3/4″	25	3217T16	2.10

Warning! **Never exceed work load limits.**

For information about strut channel and accessories, see page 1546.

Strut-Mount Clamps

Mount pipe, tube, thin-wall (EMT) conduit, and thick-wall (rigid) conduit to strut channel. Bolt and nut are included. Clamps fit all 1⅝″ wide strut channel (not included).

Easy-Adjust Strut-Mount Clamps

Even when these clamps are installed side by side, the bolts are easily accessible. They fit all 1⅝″ wide strut channel (not included).

Clamps with top bolt have the bolt centered at the top of the clamp. Made of zinc-plated steel.

Clamps with angled bolt have the bolt extended up at a 30° angle making them easy to access with a screwdriver or drill in low headroom applications. Made of zinc-plated steel with a gold finish.

With Top Bolt

Parallel Strut-Mount Clamps

Look no further if you need a clamp that holds pipe and conduit parallel with the strut channel. Clamps are made of zinc-plated steel and include a hex head screw and nut. They fit all 1⅝″ wide strut channel (not included). *Note:* Not rated for work load limit.

Warning! ***Never exceed work load limits.***

For information about strut channel and accessories, see page 1546.

Strut-Mount Clamps for Insulated Tubing

Clamps snap closed over the insulation on your copper tubing. They accept tubing with 3/8″ or 1/2″ thick insulation. Clamps are made of black plastic and fit all 1 5/8″ wide strut channel (not included). Temperature range is –40° to +140° F.

For OD	For Copper Tube Size		Each	For OD	For Copper Tube Size		Each
1/2″	1/2″	3656T83	$2.74	1″	1″	3656T86	$4.23

Vibration- and Noise-Damping Strut-Mount Clamps

The rubber inserts on these clamps greatly reduce vibration and line noise. Clamps are made of corrosion-resistant black glass-filled nylon and have a stainless steel nut and bolt. They all fit 1 5/8″ wide strut channel (not included). Excellent for refrigeration, HVAC, and hydraulic applications. Temperature range is –35° to +250° F.

Vibration-Damping Strut-Mount Clamps

Not only do the thermoplastic inserts on these clamps reduce vibration, they resist most oils, chemicals, and cleaning compounds. Inserts on clamps with a 1 3/4″ and smaller OD are hinged for easier insertion of material. Clamps fit all 1 5/8″ wide strut channel (not included). Temperature range is –50° to +275° F.

Zinc-chromate steel clamps with a 1 3/8″ and smaller OD include a shoulder bolt to prevent overtightening. ***Type 316 stainless steel*** clamps have Type 304 stainless steel bolts and nuts, unless noted.

Also Available: Hot-dipped galvanized steel clamps. Please ask for 32625T888 and specify tube/pipe size.

★ Fits 3 5/8″ tube size. ▲ Bolt and nut are made of Type 316 stainless steel.

For information about strut channel and accessories, see page 1546.

Vibration-Damping Strut-Mount Clamps for Pressurized Lines

Dampen vibration and noise and absorb shock when supporting tubing and pipe in hydraulic applications up to 2,000 psi. Clamps are polypropylene and are secured by dual-clamping bolts and nuts. They fit all 1⅝" wide strut channel (not included). Temperature range is –22° to +194° F.

Strut-Mount Shelf Brackets

These brackets lay against the channel opening of 1⅝" wide strut channel (not included) and the tab on the end fits inside for extra support. Brackets are 1/4" thick and have 9/16" mounting holes (fasteners not included).

Material	8½" Length (A)	Each	10½" Length (A)	Each	12½" Length (A)	Each	14½" Length (A)	Each	16½" Length (A)	Each

Tied-Wire Hangers

Attach these hangers to I-beams and other structural elements, and use the stiff wire that is securely tied to them in suspended ceiling and other hanging applications. The steel tied wire is 6-feet long and 0.105" dia.

(1) Anchor for wood hanger has a sharp point for use on wood.

(2) Beam clip hangers attach to I-beam flanges.

(3) Angle bracket hanger attaches to walls, ceilings, and the side or bottom of I-beams. It has a 3/16" dia. mounting hole (fastener not included).

	Style	Fits Flange Thick.	Work Load Limit, lbs.		Each
1	Anchor for Wood	—	200	5326K21	$0.79
2	Beam Clip	1/8" to 1/4"	200	5326K17	1.56
2	Beam Clip	5/16" to 1/2"	200	5326K19	1.56
3	Angle Bracket	—	150	5326K11	.85

Rigid Straps

A basic yet effective design—straps have mounting holes for securing your duct (fasteners not included). ***Galvanized steel*** straps are corrosion resistant.

Lg. × Wd.	Thick.	Mounting Hole Dia.	Mounting Hole Ctr.-to-Ctr.	Galvanized Steel	Each	Steel	Each
60" × 3/4"	1/16"	9/32"	11/16"	9600T36	$5.29	—	—
60" × 7/8"	1/16"	9/32"	11/16"	9600T37	6.14	—	—
60" × 1"	5/64"	9/32"	11/16"	9600T38	8.71	—	—
60" × 1 1/4"	7/64"	3/8"	5/8"	—	—	9600T51	$11.66

Flexible Straps

Flexibility is the name of the game when using these to secure duct, pipe, and large bundles.

Straps with mounting holes have alternately spaced 1/8" dia. and 1/4" dia. holes on 1/2" centers. ***Straps without mounting holes*** allow you to drill your own holes.

Galvanized steel straps offer corrosion resistance. ***Copper-plated steel*** straps are compatible with copper tube. ***Type 304 stainless steel*** straps are more corrosion resistant than galvanized steel.

Warning! ***Never exceed work load limits.***

One mil equals 0.001″.

Press-to-Close Bags

Bags are made of FDA-compliant polyethylene resin. 8″×8″ bags have an approximate capacity of one quart. 12″×12″ bags have an approximate capacity of one gallon. The 6- and 8-mil thick bags are more puncture resistant than 2- and 4-mil thick bags.

Standard—Color is clear.

Greenline—Designed to decompose in landfill conditions, these bags meet ASTM D5511 for plastic. Color is clear.

Choose-a-Color—**To Order:** Please specify opaque black, opaque white, translucent blue, translucent green, translucent red, or translucent yellow.

Bags with Brass Grommet—Bags include a twist tie for hanging tags and instructions. Color is clear.

Mark-On—Bags have a white space to write on. Color is clear. Bags with imprint have black letters.

Specialty Press-to-Close Bags

UV Inhibiting—Protect contents from damage caused by ultraviolet light. Bags are polyethylene. Color is translucent brown, except 19495T23, which is opaque brown.

Corrosion Inhibiting—A corrosion inhibitor protects ferrous and nonferrous metals from corrosion. Bags are nitrite-free polyethylene. Color is translucent blue.

Tarnish Inhibiting—Bags have a coating that prevents tarnishing of precious metals. All are made of polyethylene. Color is clear.

Antistatic—Bags are made of polyethylene with an additive that prevents static charge from building up on the bag's surface. Bags qualify as electrostatic protective barrier material under MIL-B-81705B. Color is translucent pink.

Static Dissipative—Bags are made of antistatic, amine-free polyethylene with an additional layer of coated polyester to protect against static discharge. Meet MIL-PRF-81705, Type II. Color is clear.

Static Shielding—Offer multi-layered protection for static-sensitive electronic components. The inner layer is amine-free polyethylene with an additive that prevents static build-up. The outer layer is coated polyester to protect against static discharge. The middle layer is aluminized polyester that stops static from passing through the bag. Meet MIL-PRF-81705D, Type III. Color is translucent silver.

Static Shielding Moisture Barrier—Bags have all the benefits of static-shielding bags plus a layer of aluminum for protection from EMI/RFI static fields and moisture. The inner layer is amine-free polyethylene. The outer layer is coated polyester. Meet IPC/JEDEC J-STD-033 and MIL-PRF-81705D, Type I. Color is opaque silver.

Clean Room—Suitable for medical and pharmaceutical applications and Class 100 clean rooms. Bags are polyethylene. Color is clear.

Zipper Bags with Air-Removal Valve

Reduce storage space and shipping costs as well as prevent unwanted movement during shipment. Press any vacuum hose to the one-way valve to remove air from the bag. Bags have a double seal with a zipper for a secure closure. All are made of FDA-compliant resins. The inner layer is polyethylene and the outer layer is nylon. Color is clear.

Open-Top Bags

Seal the top with heat or close with a twist tie. For heat sealers, see page 1559. For twist ties, see page 1521.

Standard

Flat

Gusseted

Flat Bottom

Bags are made from FDA-compliant polyethylene resin. Color is clear, unless otherwise stated.
Gusseted bags have an accordion fold on each side that expands to fit bulky items.
Flat-bottom bags have a cardboard insert so they can stand and be filled more easily. Color is translucent white.

Cut-to-Length Bags on a Roll

Roll Shown with Optional Dispenser

Cut the length you need and heat seal the ends to create a bag. Bags are made of FDA-compliant polyethylene resin. Rolls have a 1″ ID core. Color is clear. For heat sealers, see page 1559. ***Optional dispensers*** fit rolls up to 14″ OD.

Heat Sealers with Timer

Also known as impulse sealers, these sealers have an operating temperature of approximately 550°F and an eight-setting timer that regulates the length of the heating cycle. Seal polyethylene, polyolefin, PVC, and Mylar. All sealers have a flat sealing surface with nonstick covers. Operate on 120 VAC, 60 Hz and have a 5½-ft. cord with a three-prong plug. Sealers have one heating element, except 19475T11, T12, and T13, which have two heating elements.

Hand-operated sealers with cutter have a built-in blade to cut off excess material.

Foot-operated sealers include a 5½″ deep shelf that adjusts from 21″ to 29½″ in height. 19475T18, T23, and T24 are UL listed.

Repair kits for hand-operated sealers include two heating elements and three covers (two upper and one lower). *Kits for hand-operated sealers with cutter* also include a replacement cutting blade. ***Repair kits for foot-operated sealers*** include two heating elements and an upper and lower cover.

To Order: For replacement cover, please specify upper or lower cover.

Hand-Held Heat Sealers

You choose the temperature and control the duration of the heat application. Typically used with thick, tough-to-seal materials. Operate on 120 VAC, 60 Hz. Sealers have one heating element, except 19035T1, 2064T16, and 2064T18, which have two heating elements.

Spot-crimp style has a pliers-style design for sealing vacuum-formed polyethylene, polystyrene, polypropylene, and PVC trays and blister packs. Has a 6-ft. cord with a two-prong plug.

Iron style seals overwraps of irregularly shaped packages and bags. Use on cellophane and foils. Add a nonstick cover (included) for sealing Pliofilm, polyethylene, and vinyl. Has a 4½-ft. cord with a three-prong plug. UL listed.

Clamp style are not only for hand-held use; they have feet under the bottom jaw for table-top operation, as well as a detachable foot pedal for hands-free operation.

2064T13 is suitable for polyethylene, polypropylene, and PVC. It includes nonstick covers and a 4½-ft. cord with a two-prong plug.

2064T16 and *T18* are suitable for cellophane, aluminum foil, and waxed and coated papers. 2064T16 also seals cloth foil, brown-paper foil, and similar laminates. Both have an 8-ft. cord with a two-prong plug.

Rotary style have a wheel to seal large polyethylene and cellophane films. Also have a heat shield and a protective handle. Cord is 6 ft. long with a two-prong plug.

Vacuum Heat Sealers and Bags

Create an airtight seal around your items. Sealer heat seals the bag and removes air at the same time. It has a 1/4″ NPT inlet for connection to your compressed air line. Air consumption is 2.5 cfm. Working pressure is 80-125 psi. Operates on 120 VAC, 60 Hz and has a 12-ft. cord with a three-prong plug.

Bags have a nylon outer layer and a polyethylene inner layer. Color is clear.

Heat-Shrink Wrapping Systems

Systems include a cradle, a heat sealer, a heat gun, and a roll of film that shrinks when heated. Sealer has a 6-ft. cord with a three-prong plug; heat gun has an 8-ft. cord with a two-prong plug. Both operate on 120 VAC, 60 Hz. Film is clear and made of PVC. Rolls are 500 ft. long. 19435T3 includes 15″ wide film. 19435T4 includes 26″ wide film.

Heat-Shrink Film

Film shrinks when heated to create a form-fitting barrier. Rolls are 500 ft. long. Color is clear.

PVC film requires less heat to shrink. Recommended shrink temp. is 200°-275° F.

Polyolefin film is food grade and is more flexible than PVC. Recommended shrink temperature is 270°-300° F.

Cut-to-Length Plastic Tubes

Round Tube (Shown with Square End Caps)

Square Tube (Shown with Square End Caps)

Use scissors to cut these clear, semirigid polyethylene tubes to the length you need. Tubes are oil and moisture resistant. Wall thickness is 0.022″.

Round tubes use red vinyl end caps (sold separately). *Sealed-end* tubes have one open end.

Square tubes won't roll away. They can be stacked, and the flat surface is easier to label than a round surface. PVC end caps (sold separately) close the ends of the tubes. **To Order:** For end caps, please specify black or red.

Adjustable-Length Plastic Tubes

Set the length of these tubes to fit their contents. Durable and reusable, tubes are made of rigid PVC and resist oil and moisture. Color is clear. Wall thickness is 0.04″.

Round tubes can be adjusted by twisting the two halves. A hexagon end prevents rolling.

Square tubes are easier to label and stack. To adjust the length, push the ends of the tube together or pull them apart.

Shipping Envelopes

Bubble-Lined Paper

Envelopes have an adhesive-strip closure, except for *open-top paper* envelopes.

Paper envelopes have a durable exterior. Color is brown.

Plastic envelopes have a water- and tear-resistant exterior. Color is white.

Padded envelopes have a paper-filled liner to cushion contents. Envelopes also have a reinforced bottom.

Bubble-lined envelopes have a puncture-resistant liner with 1/8″ high bubbles that protects contents.

Corrugated Cardboard Boxes

Optional Stand

Flaps meet in the center when folded. Boxes are tested to Edge Crush Test (ECT) standards, which measure the amount of force a carton can withstand before the edges collapse. Color is brown. Shipped flat.

Standard boxes meet ECT 32 (32 lbs. per inch), which is comparable to a 200-lb. burst strength. ***Heavy duty*** boxes meet ECT 44 (44 lbs. per inch), which is comparable to a 250-lb. burst strength. ***Double-wall heavy duty*** boxes meet ECT 51 (51 lbs. per inch), which is comparable to a 275-lb. burst strength.

Optional stand has five dividers for sorting boxes. It is made of steel with a black painted finish.

For box sealing tape and sealing tape dispensers, see pages 3433-3437.

Liquid Shipping Containers

Containers are authorized for shipping hazardous materials per CFR Title 49. All containers include a corrugated cardboard box.

Note: It is the responsibility of the shipper to properly package and label all hazardous materials, and ensure appropriate method of shipment in compliance with all applicable regulatory guidelines.

Certified for Packing Groups II and III

Suitable for most liquids, containers are made of FDA-compliant polyethylene resin. The *5-gal. containers* have a handle.

Built-in container collapses as it dispenses for uninterrupted flow. Container has a 38 mm screw cap. Box is white and has an opening to access the container's spout.

Removable container has a 70 mm screw cap with threads for attaching a spigot. It also has a pouring vent with a cap. Box is brown.

Cardboard Shipping Crates

Multiple layers of laminated cardboard make these crates a more durable alternative to corrugated boxes. They are also lighter, less expensive, and more shock resistant than wood crates. Crates consist of two U-shaped channels and two U-shaped end caps. They can be cut to any length with a band saw. To assemble, place one channel on top of the other and close off the ends with the end caps. Color is white.

0.103″	0.020″	1954T6	67.84

Box Reducers

Save on shipping costs—cut your boxes down to size. Run the steel scoring wheel along the inside of the box to create new flaps that fold over. You can reduce box height by 2⅜″ to 11¾″. Reducer is 12¾″ long and made of chrome-plated steel.

Box Reducer	2036T15	$16.94
Repl. Scoring Wheel	2036T19	2.12

Box Staplers

Precisely set staples into corrugated cardboard boxes. These staplers have adjustable settings that control the tightness of the staple clinch and the depth of the staple, which prevents the staple from coming into contact with the box contents.

Staplers for 5/8″ leg length are for use on single-wall corrugated boxes. For double-wall corrugated boxes, use staplers for 3/4″ leg length.

Anvils perform the clinching operation in the stapler. They are interchangeable, so you can modify staplers to accept either leg length by swapping the anvil with another size (replacement anvils sold separately).

Air-powered staplers have a 1/4″ NPT air inlet and operate on 80-90 psi.

Roll-style staplers are for high-production applications. To modify the leg length capacity of the staplers, the staple tray (sold separately) must also be changed.

Repair kits contain the most frequently requested parts, including springs and fasteners. Kits for air-powered staplers also include O-rings and a fully assembled valve stem. *Note:* Kits do not include anvils; replacement anvils are sold separately.

Replacement anvils include one right-hand and one left-hand anvil plus mounting screws.

Replacement staple trays (also known as magazines) hold the strip or roll of staples.

Box-Bottom Staplers

Manual

Also known as bottomers, these staplers secure the bottoms of boxes. They hold 250 1 1/4″ wide staples (sold separately) with either a 5/8″ or 3/4″ leg length. Staplers are 46″ Lg.×24″ Wd. (at the rear legs)×52″ Ht. and have leveling pads for stability. Max. box height is 39″.

Air-powered stapler is furnished with a combination filter/regulator. It has a 1/4″ NPT air inlet and operates on 60-80 psi.

Paper Rolls and Sheets

Rolls have a 9″ diameter with a 1″ ID core.
White Newsprint—Clean, low-cost packing material.
Brown Kraft—Good as an outer wrap for parcels.
Reinforced Brown—Two sheets of brown paper (also known as kraft paper) are layered and reinforced with high-strength fiberglass to handle heavy products. Also protects contents from moisture.
Raised Pattern Brown—The raised pattern provides absorbency. Ideal as an interleaving material.
Laminated White—Also known as freezer paper, this FDA-compliant paper is coated with polyethylene on one side for resistance to moisture and tearing.

Corrosion- and Tarnish-Inhibiting Wrap

Also known as volatile corrosion inhibitor (VCI) wrap, these chemically impregnated wraps protect metals from corrosion and tarnish. For the best protection, the coated side should be in contact with the metal.

Corrosion-Inhibiting Wrap

Paper—Also known as kraft paper, for use on ferrous metal products. Meets MIL-PRF-3420.
Polyethylene Film—Heat-sealable film that's particularly effective for protecting steel and tin. The *18″ roll* unfolds into 36″×36″ perforated sheets; the *24″ roll* unfolds into 48″×48″ perforated sheets. The *48″ roll* is not folded or perforated.

Foam Wrap

2007T71

Made of polyethylene, this foam is nonabrasive and moisture resistant. Rolls are perforated every 12″ and have a 3″ ID core. Color is white.

Foam wrap in dispenser box allows one-hand use. Box is 19½″ Lg.×12½″ Wd.×20″ Ht.

Self-adhering foam wrap instantly clings to itself but not the item being wrapped. Wrap continues to adhere after multiple uses.

Disposable Void-Filler Air Bags

Reduce product damage in transit. These inflatable paper bags prevent tipping and provide a cushion between products and walls. Color is brown.

Use the ***inflator nozzle*** (sold separately) to fill bags with compressed air (3 psi maximum). The nozzle connects to your air supply and includes a tip that fits a receptacle in each bag. Puncture bags to deflate.

Heavy Duty Heat-Shrink Wrap

Use wrap for long-term storage and transportation of large and irregularly shaped objects. Wrap is made of thick polyethylene that shrinks when heated to create a skin-tight barrier. Material is folded on the roll for compact storage. Rolls are approximately 5 ft. wide and have a 3″ ID core. Shrink temperature is 275° F. Color is white.

Tape holds seams together and patches holes.

For heat gun, see 30975K11 on page 2735.

Corrosion-Inhibiting Heat-Shrink Bags

Get all the benefits of heat-shrink wrap in a convenient bag. Bags also contain a corrosion inhibitor to protect metals and are UV resistant. They're made of polyester-lined polyethylene that shrinks when heated and have a hook-and-loop closure so it's easy to seal them. Shrink temperature is 210° F. Color is tan. For heat guns, see page 2733.

Instant-Expanding Package Foam

Create custom-fitted packaging for products of almost any size or shape. Put a flat foam pack on each side of your product and press on the indicated spots until foam begins to expand. When activated, packs expand up to 27 times the original size and start to set within 60 seconds. Pack is made of polyethylene; foam is a polyurethane composite. Color is blue.

Specialty Wrap

High-performance wrap has already been through a stretching process, which results in better load holding. Unlike other stretch wrap, it does not decrease in width during application, meaning fewer trips around to cover the load. Color is clear.

Corrosion-inhibiting wrap contains a corrosion inhibitor to protect metals. Wrap is FDA compliant for use on food containers and handling equipment. Color is translucent blue.

Antistatic wrap protects sensitive items from static charges. Color is translucent dark red.

Shock-Indicating Labels

You'll know at a glance if your package has incurred shock. All labels are adhesive backed.

Sensitivity is measured in "G" (G-force), which represents the force required to activate the indicator.

Single Use

At the center of these paper labels is a small liquid-filled glass vial with a protective plastic housing. When subjected to shock, the liquid turns a bright color.

Use the table to determine the proper label for your package.

	Package Size				
Package Wt.	0-1 cu. ft.	1-5 cu. ft.	6-15 cu. ft.	16-50 cu. ft.	50-Up cu. ft.
0-10 lbs.	Green	Green	Orange	Orange	Red

Resettable

Reset these indicating labels with a paper clip—they can be reused up to 50 times. Labels have arrows that turn from red to blue to indicate which surface of the package sustained impact. *Note:* Mount the labels in the direction you want shock to be monitored. Use three indicating labels to monitor a package in all directions.

A 3¾″ Wd.×3⅞″ Ht. warning label for the outside of the package and a 3¾″ Wd.×¾″ Ht. label for the bill of lading are also included. Indicating labels are made of plastic; warning labels are made of paper.

Indicating Label

ORM-D-AIR	250	1971T41	5.36

Package Tip-Indicating Labels

Quickly identify containers that have been tipped during transit. An arrow-shaped window on the red indicator turns blue if the package is tipped 90° or more. Includes five 2¾″ Wd.×3¾″ Ht. indicating labels, five 3¾″ Wd.×5¼″ Ht. warning labels for the outside of the package, and five 3¾″ Wd.×¾″ Ht. warning labels for the bill of lading. All labels are adhesive backed. Indicating labels are made of plastic; warning labels are made of paper. Warning labels are white with a red imprint.

Indicating Label

Warning Labels

19455T5 ..... Pkg. $10.76

Package-Handling Warning Labels

Get the attention of package handlers. Labels are made of paper with an adhesive backing. Roll diameter is 4½″, except 2031T53, which is 5″. Rolls have a 3″ ID core.

Fragile is white with a red imprint.

Attention electrostatic sensitive devices is yellow with a black imprint.

Heavy is white with black, red, and yellow imprint.

Metal Strapping

Coil

Mini Coil in Dispenser Box

Solid

Punched

Secure your pallet loads, bundles, and crates with this strapping.

Coils are wound like a spool of thread. *Carbon steel* coils weigh approximately 100 lbs. *Type 302 stainless steel* coils weigh approximately 85 lbs. ***Mini coils*** are wound like a roll of tape, so the coil width is equal to the strapping width.

Low-carbon steel has a black painted finish, finished edges, and a wax coating to reduce friction. Meets ASTM D3953.

High-carbon steel is heat treated, providing high strength with elongation for shock resistance. Strapping has a black painted finish, rounded edges, and a wax coating to reduce friction. Meets ASTM D3953.

Type 302 stainless steel offers superior corrosion resistance over carbon steel. This strapping is oiled for lubricity. Meets ASTM A666.

Note: To match strapping with compatible seals, tools, and dispensers, choose items with the same "Strapping Group No." For strapping tensioners and kits, see page 1571. For strapping dispensers, see page 1574.

★ Coil is 1 1/4″ wide.

Seals for Metal Strapping

Open Closed

Seals are crimped onto metal strapping with a sealer (sold separately) to keep strapping under tension.

Open seals are for use on flat surfaces. They snap onto overlapping strap ends during or after application of tension.

Closed seals are for use on irregular surfaces as well as rounded objects. They feed onto strap ends before tension is applied with a tensioner.

Zinc-plated steel seals meet ASTM D3953. ***Type 304 stainless steel*** seals meet ASTM A666.

Note: To match seals with compatible strapping, choose items with the same strapping width or "Strapping Group No."

For Strapping Group No.	For Strapping Width	Length	Pkg. Qty.	Open Seals	Pkg.	Closed Seals	Pkg.

Sealers for Metal Strapping

A B

C

Also known as crimpers, sealers secure seals (sold separately) onto metal strapping.

(A&B) Front-action sealers are for use with lower-capacity (narrow and thin) strapping.

(C) Side-action sealers are for use with higher-capacity (wide and thick) strapping when extra force is needed.

Sealers for open seals cut two notches on each side of the seal with one operation.

Sealers for closed seals cut a single notch on each side of the seal with one operation. For best results, apply two notches per seal.

Note: To match a sealer with compatible strapping, choose items with the same strapping width and thickness or "Strapping Group No."

Tensioners for Metal Strapping

Tensioners draw strapping tight around your packages.

Tensioners for Open Seals— Use on flat surfaces. Strapping is wrapped around the package and overlapped on top.

Tensioners for Closed Seals— Use on irregular surfaces as well as rounded objects. Place the seal on one end and fold strapping back to form a hook, then slide the other end of the strapping through the seal. Tensioners push against the seal as they tighten strapping.

Styles A and ***C*** have ratchet action for unlimited take-up. Tensioner holds the bottom strap while a feedwheel bites into the strap and tightens it.

Style B holds the bottom strap and tensions the top strap by winding it around the take-up wheel for maximum tension.

Styles D and ***E*** are a rack-and-pinion style that pushes the seal to create high tension without slip. Pull strapping tight manually before applying tension.

Note: To match a tensioner to compatible strapping, choose items with the same strapping width and thickness or "Strapping Group No." For strapping, see page 1570.

Tensioners For Open Seals

Combination Tensioners/Sealers for Metal Strapping

These tools do double duty, pulling metal strapping tight and then sealing it. They create a sealless joint by crimping interlocking notches into the strapping and cutting off the excess.

Note: To match tensioners/sealers with compatible strapping, choose items with the same strapping width and thickness or "Strapping Group No." For strapping, see page 1570.

For Strapping Group No.	For Strapping Width	For Strapping Thickness		
2, 3	1/2″	0.015″-0.025″	20275T91	$1,124.76

Metal Strapping Kits

All kits include a tensioner, a sealer, and a strap cutter.

Open seals are best for flat surfaces. *Closed seals* can be used on irregular surfaces as well as rounded objects.

Kits with mini coils have two 200-ft. mini coils of low-carbon steel strapping in dispenser boxes and 500 open seals. Kits come in a steel carrying case with trays for storing tools.

Dispenser kits include a steel dispenser with a tool tray and wheels and 2,500 seals for high-volume applications. Use with 3″ wide coils of strapping (sold separately on page 1570). *Note:* To match a kit to compatible strapping, choose items with the same strapping width and thickness or "Strapping Group No."

Edge and Corner Protectors

Protect the edges and corners of your boxes from strapping indentations and bumps during shipping. All protectors are formed 90° angles.

Cardboard protectors are made of multiple layers of cardboard that are glued and laminated. They also improve the stacking strength of boxes. Color is white.

Plastic protectors have a ridged channel to hold metal or plastic strapping in place during tightening. The outside of the protector is nonslip and nonmarring. Color is black.

Plastic Strapping

Coil

Mini Coil in Dispenser Box

Embossed

Bonded

Woven

Heavy Duty Woven

Lighter and safer than metal, plastic strapping is also more flexible.

Coils are wound like a spool of thread. ***Mini coils*** are wound like a roll of tape, so the coil width equals the strapping width.

Embossed polypropylene is for light duty applications. Color is black.

Smooth polyester is stronger than polypropylene strapping. It can sustain a moderate stretch and return to its original condition. Color is black.

Bonded polyester is pliable and shock resistant. Color is white.

Woven polyester is flexible and shock resistant like bonded polyester but has a cross thread to prevent tearing and fraying. Color is white.

Heavy duty woven polyester is thicker and more durable than woven polyester strapping. Color is white.

Note: To match strapping with compatible seals, tools, and dispensers, choose items with the same "Strapping Group No." For strapping tensioners and kits, see page 1573. For strapping dispensers, see page 1574.

★ Made of smooth polypropylene. ♣ Color is green. ♥ Coil is 3″ wide. ▲ Coil is 6¼″ wide. ■ Coil does not come in a dispenser box.

Buckles and Seals for Plastic Strapping

Buckles and seals hold strapping under tension. *Note:* To match buckles and seals to compatible strapping, choose items with the same strapping material and width or material and "Strapping Group No."

Buckles

Plastic

Steel Wire

Buckles are designed for low-tension applications. Tighten strapping by hand or with a tensioner. ***Plastic*** and ***steel wire*** buckles are for polypropylene and bonded and woven polyester strapping. ***Heavy duty steel wire*** buckles are for heavy duty woven polyester strapping.

For Strapping Group No.	For Strapping Width	Lg.	Pkg. Qty.		Pkg.
Plastic					
10-12, 14	⅜″, ½″	2⅛″	250	1958T81	$7.58

20	1¼″	2¼″	10	1958T67	5.18

Seals

Smooth

Serrated

Crimp with a sealer after tightening strapping with a tensioner. Seals are made of zinc-plated steel.

Smooth seals meet ASTM D3950. ***Serrated*** seals have teeth on the inside to bite strapping for high-strength applications.

For Strapping Group No.	For Strapping Width	Lg.	Pkg. Qty.		Pkg.

17	¾″	1¼″	50	1958T11	9.88

Sealers for Plastic Strapping

Also known as crimpers, sealers secure seals (sold separately) on strapping.

Note: To match a sealer to compatible strapping, choose items with the same strapping width and thickness or "Strapping Group No."

For Strapping Group No.	For Strapping Width	For Strapping Thickness	Handle Length		
For Smooth Seals and Polypropylene Strapping					
10	⅜″	0.015″-0.023″	14″	20885T31	$182.90

Tensioners for Plastic Strapping

(A&B) Hand-tension styles are designed for use with buckles in low-tension applications. ***Style A*** lets you tighten strapping while threading plastic or wire buckles. It has a built-in cutter. ***Style B*** uses leverage to pull strapping tight.

(C-E) High-tension styles hold the bottom strap and tension the top strap by winding it around a take-up wheel. All have a built-in cutter.

Note: To match tensioners to compatible strapping, choose items with the same strapping material, width, and thickness or material and "Strapping Group No." For strapping, see page 1572.

	For Strapping Material	For Strapping Group No.	For Strapping Width	For Strapping Thickness		
Hand Tension						
A	Polypropylene	10-13, 17	¼″-¾″	Up to 0.045″	**20885T81**	$4.50

E	Polypropylene and Polyester	13, 15-20	⅝″-1½″	0.020″-0.060″	**20885T66**	442.40

Combination Tensioners/Sealers for Plastic Strapping

With one tool you can tighten and seal polypropylene and smooth polyester strapping.

(F) Manual tensioners/sealers have multiple levers for tensioning and sealing. They require a separate seal to make the joint in a strapping assembly. Serrated zinc-plated steel seals sold separately.

(G&H) Battery-powered tensioners/sealers use heat and friction to create a sealless weld on strapping.

(G) Has manual tension, so the battery is used only for the sealing and cutting process. An adjustable friction clutch prevents overtightening of the strapping. Comes with a rechargeable 12-volt battery and a battery charger that operates on 120 VAC and has a 6-ft. power cord with a two-prong plug.

(H) Have automatic tension, cutting, and sealing. Come with two rechargeable 18-volt batteries and battery charger that operates on 120 VAC and has a 5-ft. power cord with a two-prong plug.

Note: To match tensioners/sealers to compatible strapping, choose items with the same strapping material, width, and thickness or material and "Strapping Group No." For strapping, see page 1572.

Plastic Strapping Kits

Everything you need to handle plastic strapping tasks. Strapping is black and comes in a dispenser box, except for Style L, which comes on a steel dispenser with wheels.

Smooth polyester strapping is stronger than polypropylene. It can sustain a moderate stretch and return to its original condition.

(J) Include a tensioner with built-in cutter and 300 buckles.
(K) Includes a tensioner, sealer, and 1,000 seals.
(L) Include a tensioner, sealer, and 500 seals.

Serrated Seals (100/Pkg.)	**1958T53**	**Pkg.**	$7.26

Strapping Machines

Capable of securing 15 polypropylene straps per minute, this portable machine saves you time and energy. Strapping is manually pulled over the package and fed into the strapping inlet. Machine tensions the strapping around the package, makes a sealless weld, and feeds out strapping for the next package. Use with 8″ wide× 8″ ID coils of polypropylene strapping (sold separately).

Machine is 35″ Lg.×23″ Wd.× 30″ Ht. It has four swivel casters, two with brakes. Unit operates on 120 VAC @ 4.6 amps, 50/60 Hz. Comes with a 15-ft. power cord with a three-prong plug.

For Strapping Width		
⅜″ and ½″	**1950T5**	$1,210.64

Plastic Strapping for Strapping Machines

Polypropylene strapping is furnished on coils designed to fit strapping machines. Color is white.

Strapping Dispensers

A

B

C

D

E

F

G

Keep strapping coils neat and ready to use. All dispensers are steel with a black painted finish. ***Styles A-B*** and ***D-G*** include a tool tray.

(A) Has large wheels for better maneuvering and has a spring-loaded brake that prevents strapping from unspooling.

(B) Fits in narrow spaces and has a spring-loaded brake that prevents strapping from unspooling.

(C) Lays horizontally on a work surface.

(D) Has pneumatic tires that work well on rough surfaces and a brake that prevents strapping from unspooling.

(F) Holds a mini coil in a dispenser box.

(G) Holds up to three mini coils in dispenser box.

Note: To match dispensers to compatible strapping, choose items with the same strapping material, width, coil width, and ID or the same material and "Strapping Group No." For strapping, see pages 1570 and 1572.

Bale and Bundle Wire Ties

Single-loop ties have a loop on one end. Feed the straight end through the loop and twist. They are longer for cardboard, lumber, and other large bundles. *Black annealed steel* is pliable. *Painted steel* is more corrosion resistant than black annealed steel. Color is gray.

Double-loop ties are shorter than single-loop ties and have a loop on each end that can be twisted around each other for a secure closure. Use on bags, cables, and other small bundles. *Black annealed steel* is pliable. *Type 304 stainless steel* offers better corrosion resistance than black annealed steel. *PVC-coated steel* reduces slipping and allows for extra-tight twists. Color is yellow.

Wire Tie Twisters

Use with Bale and Bundle Wire Ties. Hooks and shafts are steel; handles are plastic.

Standard-grip twister has a revolving handle for quick twisting.

Spring-return twister has a spiral shaft that rotates when the handle is pulled back.

Standard-Grip Twister	2002T3	$2.88
Spring-Return Twister	2002T5	29.63

High-Strength Rubber Banding

Heavy Duty

An economical alternative to strapping, these reusable bands keep items of all shapes and sizes in place during transit. No tools required. Color is green.

Heavy duty are suitable for drums, barrels, pails, and for securing protective covers.

Light duty hold rolled material and small boxes together.

High-Security Tamper Seals

Our strongest tamper seals require cable or bolt cutters for removal. Not offered blank for security reasons. Seals meet C-TPAT (Customs-Trade Partnership Against Terrorism) and U.S. International Customs (ISO/PAS 17712) requirements, unless noted.

(1) Wire Rope Seals— Seals are made of strong steel cable with a chrome-plated steel locking end fitting.

(2) Pull-Tight Wire Rope Seals— Insert the free end of the rope into the seal and pull it tight. Seal body is powder-coated zinc; wire rope is galvanized steel.

(3) Bolt-Style Seal— Bolt is steel with a plastic coating that resists corrosion yet scratches easily to show evidence of tampering. To install, snap apart the plastic attachment holding the bolt and body together and insert the bolt into the body.

1

2

3

Tamper Seals

Insert the free end into the seal body to close. Seals must be cut or broken to be opened. Not offered blank for security reasons. Seals are plastic, unless otherwise stated.

Fixed-loop seals have a set loop size when the seal end is pushed into the seal body. Use on trucks and other containers with large openings. ***Pull-tight seals*** adjust to keep a tight seal on containers.

(5&6) Conform to Mil. Spec. FF-S-2738A. Made of tin-plated steel.

(7) Imprinted with a black bar code. Made of tin-plated steel. *Code 39* seal has M11 identification and eight characters. *Interleaved 2 of 5* seal has M12 identification and 12 characters.

(9) Have a wire hasp loop end.

(10) Has a pull tab for tool-free removal.

Seal Presses

Squeeze the spring-loaded top handle together with the bottom handle to seal discs.

(A) Presses for lead-disc seals come with two flat dies. Presses are made of steel.

(B) Presses for lead- and aluminum-disc seals have two flat dies. One die is adjustable to fine-tune the depth of the impression on the seal. *Extra die* replaces the adjustable die. Presses are made of malleable iron.

(C) Presses for aluminum-disc seals have an ergonomic design plus two curved dies to create a secure seal with less effort. Presses also have a lever to retain wire tension while sealing the disc. Body is lightweight aluminum.

To Order: For engraved dies, please specify characters: For styles A and B, up to four characters including spaces for each die. For style C, up to six characters per line including spaces; maximum two lines per die.

About Tension and Compression Force Gauges

Also called push-pull gauges, these gauges measure tension (pull-apart) force and compression (push-together) force. For example, they can measure the tension force needed to pull adhesive-backed hooks off a wall and the compression force needed to compress a spring to a certain length.

When selecting a gauge, choose one that has twice the capacity of the measurement you expect. For example, if you need to weigh 100 lbs., choose a scale with a 200-lb. capacity.

Tension and Compression Force Gauges

Count on highly accurate readings with these easy-to-operate gauges. They let you measure tension on one end of the gauge and compression on the other. They have a switch for activating or deactivating maximum readings and can be easily reset to zero. Housing is aluminum. Dial is 2″ dia. with a plastic lens. Gauges are furnished with a plastic carrying case and a certificate of calibration traceable to NIST (National Institute of Standards and Technology).

Standard gauges include six force measurement attachments: small hook, large hook, flat, notched, cone, and chisel, as well as a 3″ extension rod for attachments. Measuring shaft has 10-32 threads. Housing is 9 3/32″ Ht.×2 5/8″ Wd.×1 13/16″ Dp. ***High-capacity*** gauge includes a removable handle and two force measuring attachments: small hook and flat. Measuring shaft has M10 threads. Housing is 9 1/2″ Ht.×3 3/4″ Wd.×2 1/2″ Dp.

Digital Tension and Compression Force Gauges

View highly accurate measurements on an easy-to-read LCD.

Standard Gauges

Display indicates on/off and maximum reading and has auto shut-off. Gauges include two force measurement attachments: hook and 3/4″ dia. compression plate, plus a 1 3/16″ long extension rod for attachments. Measuring shaft has 10-32 threads. Housing is 5 1/4″ Ht.×3″ Wd.×1 1/4″ Dp. and made of ABS plastic. LCD characters are 3/8″ high. Gauges operate on four AA batteries (included). Temperature range is 50° to 95° F.

Optional Data-Logging Software—Compatible with Windows 3.X, 95, 98, 2000, or NT. This software allows you to upload your force data into Excel, Access, Lotus, or other statistics programs. Furnished on a CD.
1852T5 ..... **Each** $313.08

For information about tension and compression force gauges, see page 1577.

Remote-Reading Digital Tension and Compression Force Gauge

Gauge with Load Cell

Connect this gauge to a remote load cell to take measurements in areas that would otherwise be inaccessible. A complete unit requires a gauge and load cell, each sold separately.

Gauge

Includes a 6-ft. long RS-232 cable with a 9-pin serial connector for uploading data to your PC. The LCD indicates maximum reading, zero setting, and low battery. It displays 1/8″ high characters on up to eight lines. Gauge has auto shut-off to preserve battery life and analog output for a chart recorder via the analog output connector.

Housing is 7 3/4″ Ht. × 2 7/8″ Wd. × 1 5/8″ Dp. and made of aluminum. Gauge includes a universal 120/230 VAC, 50/60 Hz adapter, rechargeable NiMH (Nickel Metal Hydride) battery pack, and a certificate of calibration traceable to NIST (National Institute of Standards and Technology). Temperature range is 40° to 110° F.

19105T51 ..... Each $1,175.34

Load Cells— 1/2″-20 Female Connection

Include an 8-ft. retractable cable with a 15-pin connection for the gauge.

Dual-Scale Tension and Compression Force Gauges

With Optional Test Stand

Calibrated in both English and metric units, you won't need to convert your measurements. These gauges have a maximum-reading indicator, which captures the highest reading, and a zero-reset button. Graduations begin at 10% of capacity. Gauges are furnished with a plastic carrying case and three force measuring attachments: hook, flat, and 2 3/8″ long extended point. Measuring shaft has M4 threads. Housing is high-impact plastic. Overall length is 4 3/8″ without attachments. Dial is 2 1/4″ dia. with a plastic lens. Gauges ***with NIST certificate*** have a certificate of calibration traceable to NIST (National Institute of Standards and Technology).

With Optional Handle

Optional test stand has a force-gauge mounting plate on the steel column. Base is black anodized aluminum with a 5/8″ thick compression plate. Stand includes a tension hook with 10-32 threads that screws into the base.

Optional handle provides a sure grip for hand-held testing. It extends 2 1/4″ on each side and attaches with included fasteners. Made of stainless steel.

	Capacity, lbs.	O'all Size, Ht. × Wd. × Dp.	Vertical Travel		Each
Optional Test Stand	100	15″ × 10″ × 10″	12″	17595T1	$674.60
Optional Handle (cannot be used with test stand)				8728T84	42.31

Slimline Tension and Compression Force Gauges

The linear design of these spring-operated gauges allows for use in tight spots.

(A) Standard Gauges— Housing is high-impact polystyrene.

(B) Gauges with Maximum-Reading Pointer— Indicator captures maximum reading. Gauges can be easily reset to zero. Housing is made of brass.

Gripping Attachments for Tension and Compression Force Gauges

Hold your testing material securely in place with these attachments. One end threads onto the force gauge shaft and the other grips the material. All have 10-32 female threads and include a 10-32 threaded stud to convert to male.

Style C has fine-point grip with smooth jaw faces. Made of steel. ***Style D*** is designed for testing filament or wire up to 1/32″ OD. Made of aluminum. ***Style E*** has one serrated jaw face and one smooth face. Made of steel. ***Style F*** has serrated jaw faces. Made of aluminum and steel.

	Load Cap., lbs.	O'all Lg.	Jaw Wd.	Max. Jaw Opening	Throat Dp.		Each
C	30	1 7/8″	1/16″	1/16″	3/8″	1828T45	$158.62

F	100	2 1/8″	3/16″	1/8″	5/8″	1828T44	332.76

For information about tension and compression force gauges, see page 1577.

Compression Force Gauges

Apply your compression load directly to the steel ball on top of these gauges and view your reading on the dial. As you increase the load, the two halves of the beam close, causing the pointer to move. A second pointer captures maximum readings. To rotate dial, unlock the knurled screw, reposition, and lock in place by tightening the screw. Dial has a plastic lens. Mount horizontally or vertically using the threaded mounting hole on the bottom of the gauge. Gauges are furnished with a plastic carrying case and a certificate of calibration traceable to NIST (National Institute of Standards and Technology).

Cap.	English, lbs. Grads.	Accuracy	Mounting Threads	Gauge Material	Overall Size, Ht.×Wd.×Dp.	Dial Size		Each
100	1	±1	1/4″-28	Aluminum	2.94″×4.25″×2″	2.25″ Dia.	8725T31	$843.54
250	2.5	±2.5	1/4″-28	Aluminum	2.94″×4.25″×2″	2.25″ Dia.	8725T32	839.47

2,000	20	±20	1/2″-20	E4340 Alloy Steel	3.44″×4.75″×2.5″	2.75″ Dia.	8725T34	1,088.77
5,000	50	±50	1/2″-20	E4340 Alloy Steel	3.94″×4.75″×2.5″	2.75″ Dia.	8725T35	1,343.16

Compression Force Gauges for Springs

Determine the amount of pressure required to compress a spring to a specified length with these gauges. Place your spring on the lower platform, find the compression length desired on the side scale (reads in inches and in millimeters), then use the lever handle to pull the upper platform down until spring is compressed to the length specified. Dial will register compression force.

Gauges have a zero reset and capture maximum readings. Housing is 15 3/4″ Ht.×5 3/4″ Wd.×10 1/2″ Dp. and made of cast aluminum. Dial is 4 3/4″ dia. with a plastic lens. Gauges measure springs up to 2 1/4″ Dia.×4 3/4″ Lg. and have three 1/4″ holes for bench mounting (fasteners not included).

English, lbs. Cap.	Grads.	Accuracy	Metric, kg Cap.	Grads.	Accuracy		Each
125	1	±2.5	57	1	±1.1	6635T5	$697.74
250	1	±5	113	1	±2.3	6635T1	697.74
350	1	±7	159	1	±3.2	6635T2	697.74

1,000	5	±20	454	5	±9.1	6635T4	697.74

Quick-Test Tension Force Gauges

Simplify taking tension force measurements. Just place the tip of the pivot arm perpendicular to the force to be measured and the arm will deflect left or right to give you a reading. The dial moves clockwise and counterclockwise and an indicator captures the maximum reading. Gauges have an aluminum housing. Dial has a shatter-resistant glass lens. Furnished in a plastic case.

Flat-tip gauges provide surface contact with test object. Dial is 1 1/2″ dia.

Round-tip gauges provide single-point contact with test object. Dial is 2 1/2″ dia.

Cap.	Metric, g Grads.	Accuracy	Overall Size, Ht.×Wd.×Dp.		Each
Flat Tip					
0 to 10	0.2	±0.2	3 3/4″×1 3/4″×1″	1368T21	$221.76

Tension Force Gauges for Wire

The nylon rollers on these gauges allow easy insertion of wire and cable for tension measurement. To use, insert test material between the two rollers at the bottom of the gauge and the slot at the top. Read the needle position and then use the table on the instrument handle to convert the needle reading to a tension measurement. Gauge is anodized aluminum. Accuracy is ±3%.

Wire Size	Min.-Max. Cap., lbs.	Wire Size	Min.-Max. Cap., lbs.	Wire Size	Min.-Max. Cap., lbs.	Overall Size, Ht.×Wd.		Each
3/32″	70-300	1/8″	100-500	5/32″	140-800	8″×4″	1840T34	$151.07
3/16″	180-1,240	7/32″	320-1,680	1/4″	300-2,000	12″×5″	1840T35	159.18
9/32″	500-2,500	5/16″	320-3,000	3/8″	200-4,500	18″×7″	1840T36	320.35

Combination Tension Force Gauges and Scales

The shackles at either end of these gauges (also known as dynamometers) let you measure tension force as well as weight. To measure tension, attach your test material to either the top or bottom shackle. To weigh an item, hang it from the bottom shackle. The shackles are connected to a beam and as they are pulled by force, the beam deflects incrementally. Measurements will register on the dial. These gauges have a maximum-reading indicator that captures the highest reading and can be manually reset to zero. Shackles are steel. Dial has a plastic lens. Gauges include a certificate of calibration traceable to NIST (National Institute of Standards and Technology).

Gauges with 5″ dia. dial have a polycarbonate housing and are furnished in a plastic storage case.

Gauges with 10″ dia. dial have an aluminum housing. *Optional steel storage case* can accommodate 1,000- to 20,000-lb. capacity gauges.

For information about tension force gauges, see page 1577.

Combination Digital Tension Force Gauges and Scales

An easy-to-read LCD registers both tension and weight measurements. Also called dynamometers, these gauges have steel shackles at either end. To measure tension, attach your test material to either the top or bottom shackle. To weigh an item, hang it from the bottom shackle. Gauges capture maximum reading; reset to zero with the push of a button. All are NEMA 4X rated for protection from dust, water, and mild corrosives. LCD displays up to six digits; character height is 1″. Temp. range is –4° to +140° F. Operate on two C batteries (included). Furnished with a certificate of calibration traceable to NIST (National Institute of Standards and Technology).

(A) Standard— Housing is aluminum alloy with gray powder-coated finish.

(B) High Accuracy— In addition to the units below, these gauges allow you to program custom capacity units. *2,500- to 10,000-lb. capacity* gauges have an aluminum alloy housing. *25,000-lb. and 100,000-lb. capacity* gauges have an alloy steel housing with nickel plating.

Easy-to-Read Hanging Scales

Double Revolution with Optional Scoop

Single Revolution

Easily view measurements on the large open-face anodized aluminum dial. These scales have a tare function to zero out the weight of the container and only weigh the contents.

Double Revolution— Pointer completes two revolutions before reaching scale capacity. Scales are steel with a gray baked-enamel finish and have top and bottom steel hooks. Dial is 8″ dia.

An *optional scoop* (sold separately below) can be used with the double revolution scales. Made of galvanized steel, scoop is 6″ Ht.×11 1/2″ Wd.×15 1/2″ Dp. It has three chains for stability and adds 18″ to the overall height of the scales.

Single Revolution— Capacity is reached in one revolution of the pointer. These spring scales have a zero-reset screw and an S-hook on the bottom of the scale. *Steel housing* scales have a 1 13/32″ Ht.×29/64″ Wd. loop opening. Dial is 8″ dia. *Cast iron housing* scales have a 2 9/64″ Lg.×59/64″ Wd. loop opening. Dial is 7″ dia.

Load-Estimating Hanging Scales

Determine approximate weights so you can efficiently load vehicles and trailers. These scales can be suspended from a block and tackle lift, an A-frame, or a forklift blade. They operate on hydraulic fluid instead of a spring so they can weigh heavier objects. Housing is anodized aluminum; dial is 4″ dia. with a plastic lens. Hooks are 4 25/32″ Ht.×3 5/8″ Wd. and made of forged steel.

Note: Not for overhead use.

English, lbs. Cap.	Grads.	Accuracy	Overall Size, Ht.×Wd.×Dp.		Each
2,000	20	±60	11″×5″×5″	17685T41	$298.91
5,000	100	±150	11″×5″×5″	17685T42	298.91

Slimline Hanging Scales

The linear design allows these scales to fit in tight spaces. All have a zero reset except *Style D*.

Accuracy for all scales is ±1 graduation.

(C&D) Standard— *Style C* have a gray baked-enamel finish. Top hook opening is 1 5/16″ dia. *Style D* has a cast iron body enclosed in steel. Top loop opening is 2 9/64″ Ht.×59/64″ Wd.

(E&F) With Tare— Use the knurled knob on the top to zero out the weight of the container and weigh only the contents. *Style E* have a 1″ Lg.×7/8″ Wd. top loop opening, except the *50-lb. capacity* scale has a 1 3/4″ Ht.×1 1/4″ Wd. opening. *Style F* have a maximum-reading indicator that captures the highest reading. They have a 1 7/8″ Lg.×2 3/4″ Wd. top loop opening except the *60- and 100-lb. capacity* scales, which have a 4″ Ht.×4 3/4″ Wd. opening.

High-Capacity Hanging Scales

Heavy duty construction allows these scales (also known as crane scales) to simultaneously lift and weigh bulk loads. They have a maximum-reading indicator that captures the highest reading and a zero-reset knob. The tare function zeros out the container weight (up to 20% of scale capacity) and only weighs the contents. Scales have a steel swivel J-hook with safety latch, cast aluminum housing, and 10″ dia. dial with a plastic lens. Furnished with a certificate of calibration traceable to NIST (National Institute of Standards and Technology).

All scales have a 1 27/32″ Ht. × 1 11/16″ Wd. shackle opening and 1 13/32″ hook opening except the ***20,000-lb. capacity*** scale, which has a 2 7/32″ hook opening.

Cap.	English, lbs. Grads.	Accuracy	Overall Size, Ht. × Wd. × Dp.		Each

Compact Digital Hanging Scales

Compact for portability, these scales offer both pound and ounce graduations in English measurements. The LCD has auto shut-off, a hold feature to capture the last reading, and tare function to zero out the container weight and only weigh the contents. LCD characters are 0.6″ high. Scales have an ABS plastic housing, steel S-hook, and come with a T-bar handle for hand-held operation. Shackle opening is 1 39/64″ Ht. × 21/32″ Wd. Temperature range is 32° to 104° F. Operate on one 9-volt battery (included) and come with a waterproof polyester carrying pouch.

Replacement 9-Volt Battery (1/Pkg.) ..... 71455K56 **Per Pkg.** $2.75

Legal-for-Trade Compact Digital Hanging Scales

Use these scales where products are sold by weight—they meet NIST (National Institute of Standards and Technology) requirements. Scales are compact for portability and have an LCD with auto shut-off, maximum-reading hold to capture the highest reading, and zero-reset button. LCD characters are 0.95″ high. Housing is ABS plastic. Top loop is 3/4″ dia. Hook is made of steel. Temperature range is 32° to 104° F. Operate on four C batteries (not included).

Digital Hanging Scales

The sealed cast aluminum housing protects these scales (also known as crane scales) in corrosive environments as they lift and weigh your material. Just press a button for tare (zero out the weight of the container and only weigh the contents), total weight of multiple loads, or reset to zero. Scales have a 2″ Ht. × 1″ Wd. top loop opening and steel swivel J-hook with safety latch. Hook opening is 1″. The LCD has 0.75″ high characters. Temperature range is 14° to 122° F. Operate on four C batteries (included).

Cap.	English, lbs. Grads.	Accuracy	Overall Size, Ht. × Wd. × Dp.		Each

Repl. C Batteries (6/Pkg.) ..... 71455K54 **Per Pkg.** $6.49

High-Capacity Digital Hanging Scales

The highest capacity digital scales we offer, these scales (also called crane scales) both lift and weigh your heaviest loads. They have a tare button to zero out the weight of the container and weigh only the contents. Shackle and hook are steel. All include batteries. ***NEMA 12 enclosures*** are rated for indoor use and protect from dust and light noncorrosive splashes. ***NEMA 4*** and ***4X enclosures*** are rated for indoor/outdoor use and protect from dust and washdowns. ***NEMA 4X*** also protects from corrosion.

Style A scales are legal-for-trade and include a certificate of calibration traceable to NIST (National Institute of Standards and Technology). They have a cast aluminum housing, LED with 1.2″ high characters, and bottom swivel hook with safety latch. 17395T13 and T14 have a 1.12″ hook opening. 17395T31 and T32 have a 1.80″ hook opening. Temperature range is –4° to +122° F.

Style B scales have a black powder-coated steel housing, top and bottom shackles, and an LCD with 0.75″ high characters. Temperature range is 32° to 140° F.

Style C scales include a certificate of calibration traceable to NIST (National Institute of Standards and Technology). They have an LCD with 1″ high characters, anodized aluminum housing, and a bottom swivel hook with safety latch. 1824T21 and 1824T25 have a 1.14″ hook opening; 1824T27 has a 1.39″ hook opening. Temperature range is –4° to +140° F.

Beam-Balance Scales

Triple Beam with Platform

Triple Beam with Pan

Double Beam and Dial with Platform

Double Beam with Dual Platform

Sliding weights on tiered beams offer an economical method of weighing small quantities of solids, liquids, and powders. These scales have magnetic damping to reduce pointer vibration and a zero-point adjustment knob. Housing is beige epoxy powder-coated zinc. Beams are aluminum.

Scales ***with tare*** function zero out the weight of the container (up to 225 g) to weigh only the contents.

Scales ***with platform*** have a 6″ dia. Type 201 stainless steel platform.

Triple beam with pan have a 6″ Dia.×¾″ Ht. Type 304 stainless steel pan. ***Double beam and dial with platform*** allows fine weight adjustments. ***Double beam with dual platform*** have two 6″ dia. Type 201 stainless steel platforms. They're commonly used for comparative weighing to determine the difference in mass between two objects, rather than their actual weight.

Optional Weight Set— Increase the capacity of single platform and pan scales by adding weights. Set includes one 500 g and two 1,000 g weights.

Bench Scales

A

B

C

D

E

Simple to use, these scales are ideal for quick, frequent weight measurements. Dial has a plastic lens.

A&B Aluminum Housing— Scales have a steel weighing mechanism. *Style A* has a dial for tare that allows you to zero out the weight of the container and weigh only the contents. NSF (National Sanitation Foundation) certified. *Style B* has zero-point adjustment.

C&D Steel Housing— Scales have a rust-resistant steel weighing mechanism. Dial is angled 30°. *5- to 40-lb. cap.* scales have a beige powder-coated finish and are NSF certified. *60- to 200-lb. cap.* scales have a beige enamel finish. *Style D* has a dial for tare that allows you to zero out the weight of the container and weigh only the contents.

E Type 304 Stainless Steel Housing— Scales have a steel weighing mechanism. Dial is angled 30°.

F Low-Profile Steel Housing— Portable and easy to store. Dial can be viewed from the top or side. Scales have a memory lock lever—press during weighing to hold the dial reading when obscured by a large item. They have a reinforced ribbed platform, nonskid feet, carrying handle, and zero-point adjustment knob. 1728T16 and T17 have a gray enamel finish.

Digital Bench Scales

Compact for portability, use these scales for lightweight items. All have an easy-to-read LCD and ABS plastic housing.

Standard— Operate on a 120 VAC, 60 Hz adapter (0.2 amp draw) or a 9-volt battery (both sold separately). LCD characters are 7/16″ high. Temperature range is 40° to 104° F. *5-lb. capacity* scale has oz./g, zero-reset, on, and off keys. *10-lb. capacity* scale has oz./g, reset/hold, on, and off keys. The reset key can also be used for tare (zeros out container weight and weighs only the contents). The hold function locks in the weight of a large package when the display is obscured.

Corrosion-Resistant Platform— All measure in grams, ounces, troy ounces, and pennyweights. *21.17-*, *70.55-*, and *211.65-oz. capacity* scales also weigh in pounds; *70.55-* and *211.65-oz. capacity* scales also weigh in kilograms. Scales have two keys: zero-reset/on/off and print/unit select. Scales have tare function to zero out the weight of the container and weigh only the contents. LCD characters are 0.6″ high. Units operate on the included 120 VAC, 60 Hz adapter (0.12 amp draw) or four AA batteries (sold separately). Temperature range is 50° to 104° F.

Digital Bench Scales with Remote Display

The remote display lets you weigh items that are larger than the platform without obstructing the LCD. These scales have four keys: lb./kg, zero-reset (which also acts as a tare function to zero out the weight of the container and weigh only the contents), on, and off. The display can be set on a bench top or wall-mounted up to 9 ft. from the scale using the two 3/16″ dia. keyhole slots on the back (fasteners not included). Display housing is 2½″ Ht.×6¼″ Wd.×1¾″ Dp. and made of ABS plastic. LCD characters are 1″ high.

Scales operate on the included 120 VAC, 60 Hz adapter (0.2 amp draw) or a 9-volt battery (sold separately). Platform has a black powder-coated finish, an embossed tread pattern, and nonskid feet. Temperature range is 41° to 95° F.

Pocket-Size Digital Scales

Not much bigger than a calculator, these scales provide accurate readings for on-the-go use. They have a tare function (zeros out the container weight and weighs only the contents) and auto shut-off. All scales have an ABS plastic housing; LCD characters are 3/8″ high.

Styles C&D run on three LR44 alkaline batteries (included). Temperature range is 41° to 95° F. *Style C* has on/tare and off keys. *Style D* has on/tare and oz./g keys.

Style E has on and zero-reset/off keys and a backlit display. Operates on two AAA batteries (included). Temperature range is 50° to 77° F.

Optional test weight is 200 g.

Corrosion-Resistant Legal-for-Trade Digital Bench Scales

Type 304 stainless steel construction holds up in harsh environments. These scales are legal-for-trade for use wherever products are sold by weight. They have keys for gross, tare (zeros out the container weight and weighs only the contents), net, on/zero-reset, and off. Display has 1/2″ high LED characters. Operate on an included 120 VAC, 50/60 Hz adapter (0.08 amp draw). Temperature range is 14° to 104° F.

Washdown Legal-for-Trade Digital Bench Scales

Choose these USDA-accepted scales for your washdown applications. They're legal-for-trade for use wherever products are sold by weight. Scales have keys for on/zero-reset, off, tare (zeros out container weight and weighs only the contents), and net/gross. The five-digit LCD indicates negative weight, center zero, stability underload and overload, and low battery. It also offers display hold and auto shut-off. LCD characters are 0.9″ high. Housing is ABS plastic. Scales operate on six D batteries (sold separately). Temperature range is 14° to 104° F.

Legal-for-Trade Digital Bench Scales

Standard and Washdown

Roller-Ball Top

Place items on the platform and position the display for an unobstructed view. These scales are legal-for-trade for use wherever products are sold by weight. All have a tare function to zero out the weight of the container and weigh only the contents. Temperature range is 14° to 104° F.

Standard and ***washdown scales*** have keys for on/zero-reset/off; print/unit selection; and tare; plus auto shut-off. Display is 8 5/16″ Ht. × 12 3/8″ Wd. × 3″ Dp. The display has an RS-232 9-pin serial port for uploading data to your PC or printer (cable not included; see pages 1866-1867). UL and C-UL listed.

Standard scales have a painted steel column connecting the display to the platform. Display can be set on a bench top. Housing is ABS plastic; LCD characters are 1″ high. Operate on the included 120 VAC, 60 Hz adapter (1 amp draw) or six C batteries (sold separately).

Washdown scales have a Type 304 stainless steel housing. Display is rated NEMA 4X/IP66 for high-pressure washdowns. LCD characters are 1″ high. Scale has a stainless steel column connecting the display to the platform. The display can be set on a bench top. Operate on the included 120 VAC, 50/60 Hz hardwire power cord or the included rechargeable batteries. Optional battery charger sold separately below.

Roller-ball top scale allows you to easily slide items on and off the platform surface, which has chrome-plated steel balls in a zinc-plated steel housing. Scale has two displays: one primary with 0.5″ high LCD characters and one remote with 1.5″ high LCD characters. Both have keys for zero-reset and unit selection. Remote display is 4″ Ht. × 7 1/2″ Wd. × 1 5/16″ Dp. and can be positioned up to 8 ft. from the platform. It can be set on a bench top or wall mounted using the two 5/16″ dia. keyhole slots (fasteners not included). Housing is ABS plastic. Scale operates through your PC with the included 6-ft. USB cable (no other power source required). Also use USB cable to upload data to your PC.

Compact Counting Bench Scales

Compact size makes it easy to count and weigh anywhere. These scales come ready to weigh grams, but you can set them to weigh in milligrams, kilograms, pennyweights, carats, pounds, ounces, ounces troy, grain, taels, mommes, Newtons, and ticals. They have keys for on/off, mode, tare (zeros out container weight and weighs only the contents), and enter/print. All scales have a set-point over/under function that lets you program a low and high limit and a 9-pin RS-232 serial port for uploading data to your PC and/or printer (cable not included; see pages 1866-1867). Housing is ABS plastic. LCD has 1″ high characters. Operate on the included 120 VAC, 60 Hz adapter (0.5 amp draw). Temperature range is 50° to 86° F. ***Standard*** scales can also run on four AA batteries (sold separately). For higher accuracy, choose a ***precision*** scale.

Styles B and ***C*** have a draft shield to protect the scale from moving air and vibration that can affect accuracy. Draft shield for ***Style C*** has three doors: one on each side and one on top.

Printer—Connect this 5×7 dot matrix to your scale using the 6-ft. RS-232 cable (sold separately). It prints 40 characters per line on 2¼″ wide paper. Operates on the included 120 VAC, 60 Hz adapter (0.48 amp draw). Overall size is 3 7/16″ Ht.×4 1/16″ Wd.×7 1/16″ Dp. Temperature range is 30° to 104° F.

Data-Logging Software—Compatible with Windows 3.X, 95, 98, or NT. This software allows you to upload your data into Excel, Access, Lotus, or other statistics programs. Furnished on a CD.

Counting Bench Scales

The wide platform on these scales accommodates large samples and weighing containers. Count as well as weigh material and use the tare function to zero out container weight and weigh only the contents.

Standard—The triple display lets you view weight, unit weight, and quantity simultaneously. Scales have a full numeric keypad plus function keys. Housing is ABS plastic. LCD is backlit with 0.87″ high characters. Scales operate on 120 VAC, 60 Hz (0.5 amp draw) and have a 6-ft. power cord with 2-prong plug as well as a 200-hour rechargeable battery for portability. Temp. range is 32° to 104° F.

D

E

F

Legal-for-Trade—Use wherever products are sold by weight. These scales have a 9-pin RS-232 serial port for uploading data to your PC (cable not included; see pages 1866-1867). Temperature range is 14° to 104° F. *Single Display*—Turn off the counting function to use as weigh-only scales. They have zero-reset, sample set, unit select, and print keys. LED characters are 0.56″ high. Housing is aluminum. Operate on 110 VAC, 50/60 Hz (0.25 amp draw) and have a 6-ft. power cord with three-prong plug. *Triple Display*—View weight, unit weight, and quantity simultaneously. These scales have a full numeric keypad plus keys for on/off, memory (stores 100 values), and set-point over/under (programs a low and high limit). LCD characters are 0.75″ high. Housing is ABS plastic. Operate on 115 VAC, 60 Hz (0.16 amp draw) and have a 5′9″ power cord with two-prong plug.

Floor Scale for Trailer Loading

Avoid overloading your trailer tongue—position it directly on the scale to determine the weight. A removable 2¼″ long extension supports the tongue in the ball socket. Use the first time you load any trailer and every time the load changes. Scales convert weight into a direct reading on a hydraulic pressure gauge. The reading (in psi) is equivalent to the tongue weight in pounds. Body is red anodized aluminum; piston is steel with black-oxide finish. Gauge has a plastic lens.

English, lbs. Cap.	Grads.	Accuracy	Scale Ht.	Overall Ht. with Extension	Base Dia.	Gauge Dia.		Each

Mobile Floor Scales

No struggling to move these heavy duty scales—just roll them where needed. The large platform handles your big weighing jobs.

Use *legal-for-trade* scales wherever products are sold by weight.

Standard beam scale and ***legal-for-trade beam*** scales have numbers and graduations on both sides of the beam. They come with a sliding weight and weight hanger. Column is steel. Wheels are cast iron except for 1799T19, which has polypropylene wheels.

All ***digital*** scales have a tare function to zero out the weight of the container and weigh only the contents. They have keys for on/off, zero-reset, and unit selection.

Standard digital scale has two rubber wheels and is similar in style to a hand truck. Frame is tubular steel. Display has an aluminum housing and 1″ high LED characters. Operates on six C batteries (included) and has a battery life indicator. It can be programmed for always on or auto-off from 12 seconds to 25 minutes. Also includes weight recall and reweigh functions. Temp. range is 32° to 100° F.

Remote display digital and ***legal-for-trade digital*** scales have a 9-pin RS-232 serial port for uploading data to your PC (cable not included; see pages 1866-1867). Operate on included 120 VAC, 50/60 Hz adapter (0.8 amp draw) or six C batteries (sold separately). Temp. range is 14° to 104° F.

Remote display digital scales let you position the LCD up to 15 ft. from the platform so large items won't block your view. Platform has two integral handles, two urethane wheels, and a ramp on two sides so you can easily slide or roll material on and off. Display has a 6⅝″ Ht.×8″ Wd.×2⅛″ Dp. Type 304 stainless steel housing and 1″ high LCD characters.

Legal-for-trade digital scale has a steel column and polypropylene wheels. Display housing is Type 304 stainless steel. LCD characters are 1″ high.

Optional Data-Logging Software for Remote Display and Legal-for-Trade Digital Scales—Compatible with Windows 3.X, 95, 98, 2000, or NT. This software allows you to upload your force data into Excel, Access, Lotus, or other statistics programs. Furnished on a CD.
1852T5 ..... **Each** $313.08

Build-Your-Own Floor Scales

Designed to accept any size platform, these floor scales can be customized to meet your needs. They include four 2″ dia. load cells with load-centering leveling feet and an LED display. Simply bolt the load cells to a load-bearing surface, attach the cables, and you have a complete scale.

Load cells are nickel-plated steel and include mounting hardware. Display includes an adjustable tilt stand. It has keys for tare (zeros out the weight of the platform and container and weighs only the contents), unit selection, and print. Housing is 7″ Ht.×8″ Wd.×4½″ Dp. and made of black powder-coated steel. LED characters are 0.56″ high. Operates on 120 VAC, 50/60 Hz (0.5 amp draw) and has a 6-ft. power cord with three-prong plug. Temperature range is 32° to 104° F.

English, lbs. Cap.	Grads.	Accuracy	Metric, kg Cap.	Grads.	Accuracy		Each

20,000	2.0	±2.0	9,071	1.0	±1.0	1912T87	1,416.67

Legal-for-Trade Digital Floor Scales

The generous platform surface on these scales can handle large loads and pallets. They're legal-for-trade for use wherever products are sold by weight. Scales have keys for zero-reset, unit selection, and print, as well as a tare function (zeros out the weight of the container and weighs only the contents). The 9-pin RS-232 serial port lets you upload data to your PC (cable not included; see pages 1866-1867). The LED display has 9/16″ high characters, a 6½″ Ht.×10″ Wd.×4″ Dp. Type 304 stainless steel washdown housing, and a 20-ft. cord for remote readings. Mount the display using the included 10⅛″ Lg.×3½″ Wd. wall bracket with four 9/32″ dia. keyhole slots or the *optional 38″ high column*, which floor mounts using the four ⅜″ dia. holes (fasteners not included). Scales operate on 120 VAC, 50/60 Hz (0.25 amp draw) and have a 6-ft. power cord with three-prong plug. Temp. range is 14° to 104°F. Accuracy is ±1 graduation.

Adjustable Height with Optional 38″ High Column

Low Incline with Optional Ramp

Optional ramps make it easier to roll loads on and off the platform and have a diamond-tread surface. Steel ramps have a black powder-coated finish.

Adjustable Height Scales— Platforms have adjustable feet to increase the height to 3½″. *Steel* platform has a diamond-tread surface and black powder-coated finish. *Type 304 stainless steel* platform has a textured surface. *Optional ramps* are 36″ Lg.×48″ Wd.

Low Incline Scales— Platforms are smooth and have 3½″ Ht.×3″ Wd. side rails to keep loads from rolling off. *Steel* platform has a black powder-coated finish. *Optional ramps* are 16″ long and the same width as the corresponding platform.

Counting Over/Under Floor Scales

Program a low and high limit on these scales, which count as well as weigh. They also automatically adjust graduations for material weight so you get more exact readings for lighter material. The display is column mounted and tilted for easier viewing—it won't be obstructed by large material. Scales are legal-for-trade for use wherever products are sold by weight. They have eight keys: F (function), set, range, mode, print, on/off, zero-reset, and tare. The 7-pin RS-232 serial port lets you upload data to your PC (cable not included; see pages 1866-1867). Platform material is Type 304 stainless steel. All operate on 120 VAC, 60 Hz. Temperature range is 14° to 104°F. Accuracy is ±1 graduation.

Scales without printer have 1″ high LCD characters and operate on the included adapter (0.06 amp draw) or six D batteries (sold separately below). Display housing is ABS plastic. ***Scales with printer*** have a vacuum fluorescent display (VFD) with 0.8″ high characters and a 6-ft. power cord with three-prong plug (1.1 amp draw). The printer is a 5×7 dot matrix built into the display head and prints 16 characters per line. Display housing is ABS plastic. ***NEMA 4X/IP65 scales without printer*** are all Type 304 stainless steel and NEMA 4X rated for indoor/outdoor use. They protect from dust, washdowns, and corrosion. Scales have 0.8″ high VFD characters and a 6-ft. power cord with three-prong plug (0.8 amp draw).

1852T5 ..... **Each** $313.08

Personnel Scales

Just like what you've seen in a doctor's office, these scales have a plastic platform and steel base. Accuracy is ±1 graduation.

Beam scales work by sliding weights, called poise, on the two beams. 1834T11 has a steel rod for measuring heights 24″-84″ and 60-213 cm and includes 150-lb. and 40-kg counterweights that increase capacity from 350 lbs. to 500 lbs. and 160 kg to 200 kg.

Digital scale has 1″ high LCD characters. The head swivels approximately 350°. Scale has two 1¾″ dia. ABS plastic wheels and a handle for mobility. The 9-pin RS-232 serial port lets you upload data to your PC (cable not included; see pages 1866-1867). Operates on the included 120 VAC, 60 Hz adapter (0.5 amp draw) or six C batteries (sold separately). Temperature range is 50° to 104°F. UL listed. NEMA 2 compliant for indoor use and protection from dirt and light splashes.

Grip-Handle Test Weights

The built-in handle makes these cast iron weights easy to move around. All are marked with their weight. For applications requiring traceability, choose a weight with an NIST (National Institute of Standards and Technology) traceable certificate.
Class 7 weights meet ANSI/ASTM Class 7 tolerances. Use with platform scales.
Class F weights meet the tolerances of NIST Handbook 105-1. Use with legal-for-trade scales.

Hook-Style Test Weights

Hooks on both ends of these weights allow you to connect several in a series for use as a dead weight tester. Or, push bottom hook into recess so the weight can stand on a scale platform. All are marked with their weight and include a certificate of accuracy.

Class 6 weights meet ANSI/ASTM Class 6 tolerances. ***Class F*** weights meet tolerances of NIST (National Institute of Standards and Technology) Handbook 105-1. Suitable for use with legal-for-trade scales.

Interlocking Test Weights

Slotted design allows these weights to be hung on a test fixture for tensile strength tests in addition to weight testing. Weights meet ANSI/ASTM Class 6 tolerances. They're made of cast iron and marked with their weight. Slot width is 9/16″. Weights include a statement of accuracy.

Optional weight hangers are used to stack and hang more than one weight at a time.

Weights

Optional Weight Hanger

75 kg	3 3/4″ × 9 1/4″	1850T51	$126.27

Interlocking Calibration Weights

Also called counterpoise or counterbalancing weights, these stackable cast iron weights are commonly used to calibrate beam scales. Just match the ratio of the weights (as noted in the table) to your scale's ratio. All meet ANSI/ASTM Class 7 tolerances and are marked with their weight. Slot width is approximately 1/2″.

Optional weight hanger is used to stack and hang more than one weight on a beam scale.

Weights

English, lbs.

Weight	Tolerance	Dia. × Ht.		Each
Ratio —*1/2:100*				
1/2 × 100	±0.01	2 29/32″ × 9/16″	1809T18	$25.85

Optional Weight Hanger

Capacity	Dia. × Ht.		Each
25 lbs.	3 31/32″ × 6 5/16″	1809T31	$55.53

High-Accuracy Calibration Weights

The most accurate weights we offer, these highly polished Type 316 stainless steel weights can be used to calibrate precision scales and balances. They're so accurate that even oil from your fingers can affect them—always handle with gloves or forceps. Meet ANSI/ASTM Class 1 tolerances. All are marked with their weight and include a statement of accuracy.

Easy-grip weights have a bottleneck design for sure handling.

Cylindrical *Easy Grip*

Individual Metric Weights

All weights come in a protective polypropylene case and include a cotton glove.

Air-Actuated Counters

Register up to 600 counts/min. with these counters that are actuated by compressed air pulses. Pressure must drop to 0 psi between air pulses. To get 600 counts/min., hose length between pulse source and counter should not exceed 2 1/2 feet. Counts decrease as hose length increases. Temp. range is 32° to 140° F. All have a 10-32 female air connection (mounting fasteners and hose not included). Housing is black plastic.

Style N has total count and preset count displays. Built-in three-way pneumatic valve stops a machine, starts a machine, or signals that count has been reached.

Optional Brass Adapters— Convert the 10-32 female connection to a 1/8″ NPT female connection.

To keep an accurate count, connect one of these mechanical counters to an object moving in a straight line, such as a punch press ram or drill press ram. All include an attached spring that returns the lever to prepare it for the next count, except *Styles A* and *G*, which have an internal spring mechanism. Mounting holes are in the base, except for *Style H*, which has a separate mounting bracket. Mounting fasteners not included. Temperature range is –15° to +117°F, unless noted. All counters count up from zero.

Rotating-Shaft Counters

Get precise counts from clutches, couplings, integrally mounted rotors, and machinery with rotating shafts with these base-mount mechanical counters. Mounting fasteners not included.

Style J has a shaft size of 1/8″ Dia.×7/16″ Lg.
Style K has a shaft size of 0.276″ Dia.×11/16″ Lg.
Style L counts down from a preset number. When the counter reaches zero, an internal relay triggers an alarm or light, or shuts off the machine. Relay is rated for 15 amps @ 230 VAC or 20 amps @ 115 VAC. They have a shaft size of 1/4″ Dia.×3/4″ Lg. Preset digits are 0.165″ high.

Voltage-Actuated Counters

Also known as electromechanical counters, connect one of these counters to receive an input voltage that causes a mechanical count. Ideal for use on machine tools, printing presses, and packaging machinery. Counters have wire leads, unless noted. Mounting fasteners not included (except for *Styles N* and *P*). All counters count up and all except *Style Q* are UL recognized (see listing for additional approvals). Temperature range is –4° to +122°F, except for *Styles C, D, F,* and *Q*, which have a range of 14° to 140°F. ***AC counters*** operate on 50/60 Hz.

Style Q counters have two displays. One shows the preset point continuously; the other counts the incoming pulses. When the count reaches the preset value, it triggers a 5-amp relay. It then continues to count any additional incoming pulses. A press of the push buttons resets count and preset values.

★ CSA certified. ✓ CE approved. ● Has screw terminals. ♥ Has push-on connections.

1/32 DIN Voltage-Actuated LCD and LED Counters

Designed for locations where space is limited, our smallest counters snap into any 1/32 DIN size (0.87″ Ht.×1.77″ Wd.) panel cutout. All have a black plastic housing, push-button and remote reset, and screw terminals. All counters require a device such as a switch, sensor, or encoder to provide count input. For proximity and sensing switches, see pages 896-899.

LCD Counters—Powered by a replaceable internal lithium battery with a 7-year life (included). Temperature range is 14° to 131° F. UL recognized, CSA certified, and CE approved.

LCD Counters with Backlight Display—Powered by a nonreplaceable internal lithium battery with a 10-year life (included). Backlight display requires external 5 VDC power supply (20 mA @ 5 V). Have decimal positioning up to three places. Temperature range is 14° to 140° F. CE approved; UL and C-UL recognized.

1737T43 requires 10-30 VDC external power supply for add and subtract (quadrature) input circuit.

LED Counters—Powered by 10-30 VDC. Count is maintained even if power is lost. Both have decimal positioning up to three places. Temperature range is 14° to 122° F. CE approved.

1745T21 has a scaling function that allows you to adjust the input pulses by a constant to obtain useful units of measure.

Adds and Subtracts	6	0.315″	600,000	Switch Contact or 4-30 VDC High Level; 0-1 VDC Low Level	0.94″×1.88″×2.32″	1745T21	172.43

♣ Low level counts per minute is 1,800.

1/16 DIN Voltage-Actuated LCD Counters with Output Controls

These counters count up to or down from a preset number, then trigger a relay output. They feature a push-button reset (which can be disabled upon setup) and screw terminals. When snapped into a 1/16 DIN size panel cutout (1.77″×1.77″) with the included rubber gasket, they are rated IP65 (protected from direct water spray). Housing is black plastic.

Counters require a device such as a switch, sensor, or encoder to provide count input. For proximity and sensing switches, see pages 896-899.

Single preset counter has a SPST output relay (see page 855 for information on output relays) that is programmable as normally open (NO) or normally closed (NC). Rated at 0.5 amps on resistive loads @ 230 VAC and 2 amps on resistive loads @ 30 VDC and powered by two 1/2 AA cell lithium batteries. Counter has six top digits (0.28″ Ht.) and six bottom digits (0.18″ Ht.) and include a mounting adapter plate with mounting clips. Overall size is 1.89″ Ht.×1.89″ Wd.×3.1″ Dp. Temperature range is 14° to 122° F.

Dual preset counter has two SPST-NO or NC relays rated at 5 amps on resistive loads @ 250 VAC/30 VDC. Counter adds and subtracts (quadrature), and the count can be scaled to useful units of measure. Powered by 85-250 VAC, 50/60 Hz or 11-14 VDC. Counter has six top digits (0.3″ Ht.) and six bottom digits (0.2″ Ht.). Overall size is 1.95″ Ht.×1.95″ Wd.×4.17″ Dp. Temperature range is 32° to 122° F.

Single Preset

Dual Preset

	Counts/Min.	Count Input Type		Each
Single Preset	1,500	12-250 VAC/12-250 VDC	1774T23	$141.99
Dual Preset	24,000-690,000	Switch Contact or 0-30 VDC	1774T45	168.30

1/8 DIN Voltage-Actuated LED Counters

Counters fit into a 1/8 DIN panel cutout (1.77″×3.62″) and offer a password lockout feature, set points, scaling, and decimal positioning. They can be programmed easily using the front-panel buttons. Count and programming instructions are retained even if power is lost or interrupted.

Counters accept switch contact or voltage input up to 30 VDC. They register up to 1.2 million counts per minute and have a scaling function that allows you to adjust the input pulses to obtain a useful unit of measure. All counters require a device such as a switch, sensor, or encoder to provide count input. For proximity and sensing switches, see pages 896-899.

Powered by 120 VAC, 50/60 Hz. They feature six 0.56″ high digits. Overall size is 2.04″ Ht.×3.93″ Wd.×3.24″ Dp. Temperature range is 32° to 131° F. Counters have screw terminals, a black plastic housing, installed neoprene gasket, and are NEMA 4X rated (washdown/corrosion resistant). UL listed and CE approved. ***Counters with output controls*** can be programmed to halt a process or activate an alarm when dual presets are reached. Two SPDT-NO or NC relays are rated at 5 amps @ 250 VAC.

1/8 DIN LED Counters/Ratemeters and Plug-In Output Controls

Keep counts and rates along with the ability to change output controls. The optional plug-in output modules (sold separately) give flexibility for relay, analog, and communication outputs. Install up to one relay, one analog, and one communication module at a time.

Counter

Counters fit into a 1/8 DIN panel cutout (1.77″×3.62″). Counters add and subtract (quadrature), accept switch contact and voltage input up to 30 VDC, and register up to 2 million counts per minute. The scaling function allows you to adjust input pulses to obtain useful units of measure. They have a six digit, 0.56″ high display of variable intensity for high- or low-light conditions. Counters have a built-in 12 VDC power supply to power external sensors. All require a device such as a switch, sensor, or encoder to provide a count input. For proximity and sensing switches, see pages 896-899.

Housing is black plastic, has screw terminals, and is NEMA 4X rated (washdown/corrosion resistant). Overall size is 1.95″ Ht.×3.8″ Wd.×4.2″ Dp. Temp. range is 32° to 122° F. CE approved; UL and C-UL listed.

Compact Voltage-Actuated LCD Counter/Ratemeter

Ideal for counting and displaying rates in units such as gallons per minute, program this battery-operated, eight-digit counter to the decimal point with the touch of two keys. Counter has push-button and remote reset. Housing is gray plastic. Accepts switch contact and DC voltage input (2-28 VDC high level; 0-1.2 VDC low level). Digits are 0.43″ high. Max. count speed is 1,200 counts per minute with switch contact input; 600,000 counts per minute with DC voltage input. Adds only. Counter requires a device such as a switch, sensor, or encoder to provide count input. For proximity and sensing switches, see pages 896-899.

Powered by an internal replaceable lithium battery with a 5-year life, the counter has screw terminals and a temp. range of –4° to +158° F. Measures 1.57″ Ht.×2.95″ Wd.×1.25″ Dp. It mounts into a 1.30″ Ht.×2.68″ Wd. panel cutout (hardware included). When properly installed with the included rubber mounting gasket, front panel is NEMA 4X rated (washdown/corrosion resistant).

16665T27 ..... **Each** $156.13

Large-Display Voltage-Actuated LED Counters

Six-Digit Counter

Adjustable-intensity red LEDs are visible from up to 130 ft. away for 2 1/4″ digits, and 180 ft. away for 4″ digits. These counters register 600 counts per minute and have a temp. range of 32° to 120° F. Enclosures are aluminum with a black finish and are rated NEMA 4 (indoor/outdoor). Each mounting bracket has one 1/4″ hex mounting bolt.

Counters operate on 85-250 VAC, 50/60 Hz and draw 14 volt amps, or 11-16 VDC and draw up to 400 mA. All have a 6-ft. power cord with a three-prong plug and accept a switch contact or 5-28 VDC voltage input. CE approved. UL recognized.

Note: All require a device such as a switch, sensor, or encoder to provide count input. For proximity and sensing switches, see pages 896-899.

Counters with preset count up from zero to a set number or down to zero. Simply select up/down mode; push a button to set the preset.

Count Function	Digits No.	Digits Ht.	Overall Size, Ht.×Wd.×Dp.		Each
Counters					
Adds	4	2 1/4″	4″ ×12″×2 1/4″	**16635T41**	$385.67

Adds and Subtracts	6	4″	7 7/8″×26″×2 1/4″	**16635T83**	709.58

Enclosed Electronic Counters with Sensor

With Proximity Sensor

Take the guessing out of building a counting system. Everything you need is included, wired together, and housed in an enclosure. Simply mount, plug in, and start counting. Counters have a fiberglass enclosure and a variable intensity LED display for readability in high- and low-light conditions. Both are programmable for single-direction up/down counting. Mounting fasteners not included, unless noted.

Enclosed LED Counter with Proximity Sensor

Use to count metallic objects. Sensor is rated NEMA 4 (indoor/outdoor); counter and enclosure are rated NEMA 4X (washdown/corrosion resistant). System has a 7-ft. power cord with three-prong plug; draws 18 volt-amps. Counter has dual set point relay control outputs rated at 5 amps on resistive loads @ 120/240 VAC or 28 VDC. Counter temp. range is 32° to 122° F. Sensor has a 3/4″ Dia.×3 1/2″ Lg. Type 304 stainless steel housing, 10-ft. cable, and includes mounting bracket and fasteners. Sensor temperature range is 0° to 140° F. CE approved; UL and C-UL listed.

Sensing Distance	Count Function	Digits No.	Digits Ht.	Powered By	Counts/ Minute	Enclosure Size, Ht.×Wd.×Dp.	Mounting Holes No.	Mounting Holes Dia.	Mounting Holes Ctr.-to-Ctr.		Each
0.059″	Adds and Subtracts	6	0.56″	85-250 VAC, 50/60 Hz	300,000	7 1/2″×7 1/2″×5 1/8″	4	1/4″	6 7/16″	**18875T71**	$561.36

Enclosed LED Counter with Shaft Encoder

To count shaft revolutions, mount encoder to a machine shaft, pulley, or gear, or face mount with the four 8-32 threaded holes spaced 1 1/16″ center-to-center. Encoder is rated NEMA 13 (strongly oil resistant) and has a 3.38″ Ht.×2.75″ Wd.×1.65″ Dp. aluminum housing and a 3/8″ Dia.×1 1/4″ Lg. stainless steel shaft extension. A 10-ft. cable connects encoder to the counter.

Encoder temp. range is 0° to 140° F. Counter has a 7-ft. power cord with three-prong plug; draws 18 volt-amps. It has dual set point relay control outputs rated at 5 amps on resistive loads @ 120/240 VAC or 28 VDC. Counter temp. range is 32° to 122° F. Counter and enclosure are rated NEMA 4X (washdown/corrosion resistant). CE approved; UL and C-UL listed.

Pulses/ Revolution	Count Function	Max. Shaft Speed	Digits No.	Digits Ht.	Powered By	Enclosure Size, Ht.×Wd.×Dp.	Mounting Holes No.	Mounting Holes Dia.	Mounting Holes Ctr.-to-Ctr.		Each
100	Adds and Subtracts	6,000 rpm	6	0.56″	85-250 VAC, 50/60 Hz	7 1/2″×7 1/2″×5 1/8″	4	1/4″	6 7/16″	**18875T72**	$570.82

LCD Counters with Built-In Light-Beam Sensor

Because counter and sensor are one piece, you can display your count right at the sensing point without wiring a remote counter to your sensor. Memory backup retains the count for up to 100 hours in case of power loss. Reset by touching the top with the included magnet. Register up to 2,000 counts per minute. Powered by 10-250 VAC, 50/60 Hz or 12-115 VDC. Counter has six 0.188″ Ht. digits, 6-ft. wire leads, and a NEMA 4X (washdown/corrosion resistant) rated black plastic housing. Overall size is 2.5″ Ht.×1.44″ Wd.×1.96″ Dp. Temp. range is 32° to 122° F. Mounting fasteners included.

Reflector Style

Light-Beam Sensor	Minimum Object Size	Sensor Range	Beam Style		Each
Object Reflecting	0.06″ Dia.	1.5″	Visible Red	4403T51	$253.26
Reflector Style	3″ Dia.	6″-30′	Visible Red	4403T52	257.61
Two-Piece	0.5″ Dia.	200′	Infrared	4403T53	322.83

Voltage-Actuated LCD Hour Meters with Maintenance Monitors

Ensure the timely maintenance of your equipment with these devices. Meters are programmable; set them to any service interval required, up to 99999.9 hours.

Meters have two LCD displays. The top display shows the total number of hours your equipment has been used and is nonresettable. Accumulated hours are stored if power is interrupted. The bottom display shows how much time has elapsed since the last maintenance and has remote reset. Hourglass symbols in both displays indicate that the meter is running. Meters have one LED light, which turns on when your chosen service interval has been reached. Meters can also be wired to send a signal to an alarm or other remote indicator.

Units are 1.7″ deep, have a 2.3″ dia. face, and 10 1-ft. wire leads. Meters mount into a 2″ dia. panel cutout using a push-on retaining ring with a foam gasket. Housing is black plastic. Temp. range is –13° to +185° F.

Voltage		Each
10-40 VDC	17045T81	$74.07
85-265 VAC, 50/60 Hz	17045T82	88.89

Magnetic-Field-Actuated LCD Hour Meter

Attach sensor to any AC or DC electric motor casing using its adhesive back or the included magnet; the motor's magnetic field triggers the sensor. Powered by a lithium battery (included)—no external power connection needed. Meters display actual running time up to 9999.9 hours. Digit height is 0.31″. Meter housing is black ABS plastic and can be wall mounted using the two 0.14″ mounting holes spaced 2.5″ center to center (fasteners not included). Size is 2⅞″ Wd.×1 13/16″ Ht.×¾″ Dp. Temperature range is –40° to +185° F.

Resettable meter can be programmed to maintain a defined maintenance interval to alert the user when the set time has elapsed.

		Each
Nonresettable	1114T27	$76.29
Resettable	1114T28	76.29

Optical Shaft Encoders

Convert shaft motion into an electrical output. Use these encoders with an electronic counter (not included) to count shaft revolutions. Units require 5-28 VDC at up to 80 mA of current. Choose a counter that accepts a DC input voltage in this range (5-28 VDC). Encoders have an aluminum housing, are 2.25″ square, and have ⅜″ Dia.×¾″ Lg. shaft extensions on both sides. Maximum shaft speed is 6,000 rpm. Temp. range is 32° to 158° F.

Add-and-subtract (quadrature) encoders increase or decrease count depending on direction of shaft rotation.

Mating connectors with cable (sold separately) simplify wiring. Optional *mounting bracket* and *wheels* (sold separately) allow you to use the encoder for length measurement applications. *Mounting bracket* is 8.28″ Lg.×7.28″ Wd.×5.91″ Ht. Includes fasteners for encoder mounting. Base has four 0.221″ dia. holes spaced 1½″×1½″ center-to-center for surface mounting (fasteners not included). *Wheel* circumference is 12″.

Cycles Per Revolution	Add Only	Each	Add and Subtract	Each
10	16695T21	$154.83	16695T24	$208.33
60	16695T22	154.83	16695T25	208.33
100	16695T32	154.83	16695T42	208.33

Mating Connector with 10-ft. Cable	16695T14	Each	$49.86
Mating Connector with 20-ft. Cable	16695T27	Each	$92.53
Mounting Bracket	16695T13	Each	$132.58
Rubber Wheel (3.82″ Dia.×0.75″ Wd.)	16695T12	Each	$88.56
Urethane Wheel (3.82″ Dia.×0.7″ Wd.)	16695T28	Each	$76.95

Wireless LCD Counter with Built-In Light-Beam Sensor

Counter and Sensor

With a light-beam sensor and battery power, this counting system has no wires to get in your way. To start counting, just position the counter and sensor between 2 and 10 feet apart. Counter has a six digit, ¼″ high display and a push-button reset. Counts up to 480 counts/min. Counter and sensor measure 1.3″ Ht.×2.1″ Wd.×0.6″ Dp. and have mounting flanges with four ¼″ dia. holes. Housing is water-resistant, tan ABS plastic. Include 3.6-volt replaceable batteries. Temp. range is 14° to 185° F.

Counter and Sensor with Serial Communication— Includes counter, sensor, receiver, voltage adapter, and software. Receiver obtains data sent wirelessly up to 600 feet by the counter and sends it serially to your PC. Has an RS232/422 interface, a DB9 serial connection. Complies with Part 15 of FCC rules.

Counter and Sensor (Two-Piece Style)	4258T17	Each	$551.99
Counter and Sensor w/ Serial Communication	4258T18	Each	$933.29

Combination Hour Meter/Counters

These nonresettable, two-in-one devices keep track of counts and time. Hour meter is motor driven and counts to 99999.99 hours; counter is electromechanical and counts to 9999999. Overall size is 2.17″ Ht.×2.17″ Wd.×1.5″ Dp. Meters have screw terminals and mount into a panel cutout size of 1.81″Ht.×1.81″Wd. (mounting clip included). Housing is black plastic. Temp. range is 5° to 140° F.

Voltage		Each
24 VAC, 60 Hz	16655T141	$125.64
115 VAC, 60 Hz	16655T142	121.47
12-24 VDC	16655T171	180.59

Vibration-Actuated Hour Meters

No electricity? These hour meters record the running time of machines and vehicles that vibrate during operation. They respond to any moderate, continuous movement. They are also water resistant. Meters are nonresettable. Housing is black plastic.

Styles A-C are powered by a nonreplaceable battery with an 8-yr. life. ***Style D*** does not generate an electric spark and is safe to use in hazardous locations.

Minute and Hour Meters

All meters are nonresettable, unless noted. AC meters operate on 60 Hz, unless noted. All are UL recognized, except *Styles B*, 1693T26, 1684T21, and 1684T23, which are UL listed (see listing for additional approvals). *Styles B*, 1693T26, *C*, *H*, and *P* include mounting fasteners; others do not.

Economy Combination Drawer Chest and Mobile Cabinet

Economical and dependable, this chest and mobile cabinet combination is ideal for less frequent use. Made of 22- to 20-gauge steel with 24-gauge drawers. Drawers fully extend on friction slides, while drawer stops keep them from completely pulling out. Both the chest and the cabinet include locking security bars and have a lock with two keys.

The chest, which is removable, has recessed side handles. Its three bottom drawers are made of black polystyrene.

The cabinet has four casters (two swivel with brakes; two rigid) with 3″ dia. polypropylene wheels. Color is red. Shipped partially assembled.

	Overall Size, Wd. × Ht. × Dp.	Cap., lbs.
Chest and Cabinet	26½″ × 44″ × 14″	400
Top Compartment (Chest)	21½″ × 3¼″ × 11½″	25
4 Drawers (Chest)	18″ × 2″ × 10¾″	25

63885A45 ..... Each $181.43

Light Duty Drawer Chests and Mobile Cabinets

Get convenient access to stored parts. All are made of steel. Drawers fully extend on friction slides (unless noted) and have drawer stops to keep them from completely pulling out. Have a lock with two keys.

A&B ***Narrow Drawer Chest and Mobile Cabinet***—Made of 22- to 16-ga. steel. Color is brown with a textured finish. Shipped assembled.

Style A—Has a top handle and a drop-front panel that prevents access to drawers. The drawers are lined with felt to protect your stored parts and have adjustable galvanized steel dividers. You can stack this 7-drawer chest on top of our 5-drawer mobile cabinet (*Style B* sold separately).

Style B—Has a push handle and four casters (two swivel with brakes; two rigid) with 5″ dia. rubber wheels. Drawers have ball-bearing slides.

C&D ***Standard Drawer Chest and Mobile Cabinet***—Made of 24- to 18-ga. steel. Full-width, recessed drawer pulls provide "grab anywhere" flexibility. Color is red. Shipped partially assembled.

Style C—Has a 17¼″ Wd. × 3 5/32″ Ht. × 6⅞″ Dp. lift-out tote tray and side handles. You can stack this 12-drawer chest on top of our 9-drawer mobile cabinet (*Style D* sold separately).

Style D—Has a push handle and four casters (two swivel with brakes; two rigid) with 5″ dia. polypropylene wheels.

E-G ***Standard Drawer Chests and Mobile Cabinet***—Made of 22- to 16-ga. steel. Color is brown with a textured finish. Shipped assembled.

Styles E&F—Both have side handles and drawers that are felt-lined to protect parts. *Style E* has adjustable galvanized steel dividers and a drop-front panel that prevents access to drawers. You can stack the 2- or 11-drawer chest on top of our 3-drawer mobile cabinet (*Style G* sold separately) or use chests stacked together for added storage.

Style G—Has a bottom compartment with a lift-up panel, and a push handle that you can attach to either side. It has four casters (two swivel with brakes; two rigid) with 5" dia. rubber wheels.

Heavy Duty Drawer Cabinets

Count on these rugged cabinets for durable storage. Made of 14-ga. steel with an 18- to 12-ga. steel frame. Drawers fully extend on ball-bearing drawer slides; drawer stops keep them from completely pulling out. Each drawer holds 400 lbs. Drawer handles have a label holder. When one drawer is open, the others lock closed to prevent tipping. Cabinets have a base with forklift entry and cover strips that conceal channels for a finished appearance. They have a lock with two keys. Cabinets can be used individually or stacked up to two high. Welded and shipped assembled. *Note:* Only stack cabinets with the same width and depth dimensions. **To Order:** Please specify color: blue or light gray.

Premium Heavy Duty Drawer Cabinets

Bench-Height Drawer Cabinet

With a load capacity of 440 lbs. per drawer, these cabinets will stand up to your heaviest storage needs. Made of 20- to 16-ga. steel with a 14-ga. steel frame. Drawers have handles with a label holder and adjustable compartments (dividers included). When one drawer is open, the others lock closed to prevent tipping. Drawers fully extend on ball-bearing drawer slides; drawer stops keep them from completely pulling out. Cabinets have a lock with two keys. All except the mobile cabinets can be connected side by side and stacked up to two high. Welded and shipped assembled. *Note:* Only stack cabinets with the same width and depth dimensions. **To Order:** Please specify color: blue or dark gray.

Full-height drawer cabinet has a recessed base with forklift entry.

Mobile drawer cabinets have a push handle. The top of the cabinet has three raised edges with an open front and a ribbed PVC work surface mat. Have four casters (two swivel with brakes; two rigid) with 6″ dia. rubber wheels.

Modular Plastic Small-Parts Cabinet with Plastic Boxes

Need to take a few parts with you but don't want to move an entire storage system? This cabinet has five slide-out trays that give you access to five removable, covered boxes; stops keep the trays from completely pulling out. Made entirely of polypropylene. An interlocking feature provides stability—multiple cabinets can be stacked and interlocked top-to-bottom without sliding apart. Wall mount using the four 7/8″ × 3/16″ keyhole slots (fasteners not included). Boxes include 16 adjustable dividers. The cabinet is black, trays are gray, and boxes are translucent. Shipped assembled.

Conductive Plastic Small-Parts Drawer Cabinets

26-Drawer Cabinet

With a surface resistivity of 10^5 ohms/sq. in., these cabinets protect your sensitive components from electrostatic damage. They're made of black polyethylene and come with a 3-ft. long static-safe ground cord. Drawer stops keep drawers from completely pulling out. Shipped assembled.

Optional dividers are black polypropylene. Each cabinet drawer holds a maximum of three dividers.

Steel Small-Parts Drawer Cabinets

A

Dividers and Insert

B

Choose from a variety of cabinet styles and drawer configurations for small-parts storage that's just right for you. All drawers have convenient pull handles and drawer stops to prevent accidental removal. They have label holders (except *Styles B* and *E*). Cabinets are made of steel. Color is light gray, except *Styles B*, *F*, and *G*, which are dark gray. All are welded and shipped assembled.

Dividers and ***divider sets*** are steel, except *Styles B* and *E*, which are polystyrene. *Styles A* and *C* require one insert (sold separately) per drawer for the optional dividers.

A&B Small-Drawer Cabinets—*Style A* are 22- to 19-ga. steel.
Style B are 24-ga. steel. Cabinet base has forklift channels. Drawers include two polystyrene dividers.

C Medium-Drawer Cabinets are made of 24- to 19-ga. steel. A base holds the cabinets 5″ off the floor for easier access to bottom drawers.

D Large-Drawer Cabinets are made of 24- to 19-ga. steel. The base holds these cabinets 5″ off the floor for easier access to the bottom drawers. *Note:* Order one optional *divider set* for each drawer.

E-G Stackable Drawer Cabinets are made of 24-ga. steel. *Note:* Only stack cabinets with the same width and depth dimensions.

Style E includes two adjustable polystyrene dividers per drawer. Cabinets have 5⁄16″ dia. holes in each corner (fasteners not included) and can be stacked up to four high. *Optional bases* are sold separately below.

Each drawer for *Styles F* and *G* has a label holder and two adjustable steel dividers. Cabinets have ¼″ dia. holes in each corner (fasteners not included) and can be stacked up to two high. *Style F* have drawer handles you attach with included fasteners.

Steel Small Parts Drawer Cabinets with Plastic Drawers

Store and organize small parts with these sturdy steel-frame cabinets. Color is dark gray. Shipped assembled.

A&B All have clear polystyrene fronts and gray polystyrene drawers, except 4600T32, which has gray polypropylene drawers. The drawers come with two black polystyrene dividers, a label holder, and label. The top of *Style A* cabinets has round indents in each corner for stacking. *Style B* has a hinged door with a lock with two keys to secure the drawers. The door is polystyrene.

C Has translucent polypropylene drawers that come with one clear polystyrene divider but can hold up to three dividers. The top of the cabinet has round indents in each corner to allow stacking.

D Have clear polypropylene drawers with scoop bottoms for easy removal of small parts. Each drawer comes with two clear polystyrene dividers but can hold up to three dividers. Cabinets have two 1/8″×5/8″ keyhole slots for wall mounting (fasteners not included).

Also Available: Replacement drawers for Styles A, B, and C cabinets. Please ask for 4600T91 and specify drawer size.

Design-Your-Own Steel Small-Parts Drawer Cabinet

In just two steps, you can design your own small-parts cabinet. Select the drawer cabinet style you need, then order any combination of drawers (sold separately) in the same style and size. All cabinets are made of 24- to 20-ga. steel. Color is dark gray, except heavy duty cabinets, which are black. Cabinets can be stacked and secured with four 5/16″ dia. holes (fasteners not included, except heavy duty cabinets). Shipped assembled. ***Optional bases*** hold cabinets off the floor.

Standard cabinets have friction drawer slides and are reinforced to prevent tipping, even when several fully loaded drawers are open. ***Standard with locking door*** cabinet has a lock and two keys. *Optional locking hinges* are chrome-plated steel. They have a maximum shackle diameter of 3/8″ and mount onto cabinets (fasteners included).

Heavy duty cabinets have ball-bearing drawer slides.

Drawers (sold separately) fully extend and have a cover and handle. Scoop bottoms make it easy to remove small parts. Drawers are steel; compartments are polystyrene, except heavy duty cabinets, which have polypropylene compartments.

How to Maximize the Number of Bin Boxes on Your Bin-Box Holder

1. Select a holder from the bin-box holders listed below. Note the usable height of the holder.

2. Now choose any combination of bin boxes (see bottom of page) as long as the sum of the height used per bin box does not exceed the usable height of the holder. See example.

3. Once you've selected the bin box sizes you want, refer back to the bin box table for the max. number of bin boxes per row.

Example: Select holder 4666T55 (Style 1 below), which has 48″ of usable height. To fill the holder, you can choose 3 rows of bin box Style B (4″ of height used), 2 rows of Style C (6″ of height used), and 2 rows of Style F (12″ of height used). The sum of all the heights used per bin box is 4″+4″+4″+6″+6″+12″+12″=48″, which is the usable height of the holder.

Create a custom system to perfectly suit your storage needs with these individual bin-box holders and bin boxes (sold separately). If you prefer, you can also purchase complete bin-box systems that we've created for you on page 1605.

Bin-Box Holders

All bin-box holders are dark gray 16-ga. steel. *Mobile bin-box holders* have two swivel and two rigid casters without brakes, unless noted. Racks and cart are shipped unassembled.

Rail bin-box holders *(Styles 1-4)* allow the bin boxes to hang from rails—an economical storage solution. *Optional mobile kit for Style 2* has four casters (two rigid, one swivel, and one swivel with brake) with 4″ dia. polyolefin wheels.

Louvered bin-box holders *(Styles 5-9)* have a solid back for increased support.

Bin Boxes

Shown on Style 8

Bin boxes are polypropylene with an open front and a label holder. All dividers are black polystyrene and come in packages of six. **To Order:** Please specify bin-box color: blue, red, yellow, or translucent (unless noted). Translucent bin boxes are FDA compliant.

Also Available: Clear lids for solid-color bin boxes (where noted below), and labels for all bin boxes. For lids, please ask for 4666T97 and specify bin-box size. For labels, please ask for 1515T322 for 4⅛″ wide bin boxes or 1512T127 for all other widths.

♦ Lids are available for solid-color bin boxes. ★ Translucent bin boxes are not available.

Warning! Do not exceed the load capacity of the storage unit, which may be less than the sum of the box capacities.

For information about designing your own bin-box systems, see page 1604.

Complete Bin-Box Systems

For your convenience, we've taken our most popular components (shown separately on the previous page) and created complete bin-box systems for you. They include a holder (rail floor rack, louvered panel, or louvered rack) and the polypropylene bin boxes specified. Made of 16-ga. steel; color is dark gray. Shipped unassembled.

To Order: Please specify bin-box color: blue, red, or yellow.

Design-Your-Own Static-Control Bin-Box Systems

These racks and panels hold antistatic and conductive bin boxes to protect sensitive electronic components from static. Racks and bin boxes are sold separately, so you can create your own storage configurations. Shipped unassembled. ***Warning:*** Do not exceed the load capacity of the storage unit, which may be less than the sum of the bin-box capacities.

A B C D

Wall-Mount Louvered Panel

Bin-Box Holders

All bin-box holders are 16-ga. steel with a black conductive coating. The louvered holders mount securely to a wall or bench. They have nine ¾″ dia. mounting holes (fasteners not included).

Optional mobile kit fits the double-sided rail floor rack, so you can move your parts anywhere. Has four casters (two rigid, one swivel, and one swivel with brake) with 4″ dia. rubber wheels.

Note: For information about designing your own bin-box system, see page 1604.

Bin Boxes

Bin boxes are polypropylene with an open front and a label holder. *Antistatic* bin boxes are for use wherever static electricity needs to be drained slowly. Surface resistivity is 10^9-10^{12} ohms/sq. Color is blue. *Conductive* bin boxes are for applications where static electricity needs to be drained quickly. Surface resistivity is less than 10^5 ohms/sq. Color is black.

Also Available: Labels for bin boxes. Please ask for 1515T322.

♣ The 36″ wide double-sided rail floor rack (4925T24) can only hold 3 bin boxes of this size.

Warning! ***Do not exceed load capacity of the storage unit, which may be less than the sum of the box capacities.***

Modular Bin-Box Racks

Growing storage needs? You can add onto these racks at any time—no tools required. They interlock horizontally and vertically, allowing you to customize for your storage needs. Each rack includes bin boxes, has a capacity of 60 lbs., and can be stacked a maximum of three high. Color is dark gray. Bin boxes include a recessed handle, two black dividers, one window and a slotted label holder. Each box also has seven divider slots molded in so it can be divided into multiple compartments. Racks, bin boxes and dividers are made of high impact polystyrene. Windows are made of clear plastic and fit on the front of the bin box. Shipped assembled.

To Order: Please specify bin-box color: blue or dark gray.

Design-Your-Own Tilt-Out Bin-Unit Racks

Rack Only

Single-Sided Rack with Bin Units

Double-Sided Mobile Rack with Bin Units

Bench Rack with Bin Units

Wall Mount Rack with Bin Units

Adjustable Bin Unit

5-Bin Unit

Create a storage center with these bins that tilt forward for easy access to contents. Racks and bin units are sold separately. Shipped unassembled.

Racks are black 14-ga. steel. Fasteners for attaching bin units to racks are included. *Double-sided mobile* rack has a pull handle on the side, four swivel casters with brakes, and 3″ dia. polyurethane wheels. *Wall-mount* rack has four 5/16″ dia. mounting holes (mounting hardware not included). Not rated for capacity.

Bin units are the complete row of bin boxes, enclosed in a case. They can be set on a shelf, mounted to a wall, or combined with a rack. They are beige polystyrene with clear bins that have an area for a label. They have six 3/16″ dia. mounting holes. The *adjustable* bin unit includes five clear polystyrene dividers, so you can create up to six storage areas. Additional dividers are sold separately.

If you would like to maximize the space on your rack with bin units of the same size, see the table below for the maximum number of bin units that can fit on each rack. To maximize space with bin units that are different sizes, make sure the sum of the height used per bin unit does not exceed the usable height of rack.

Heavy Duty Modular Steel Bin-Box Racks

Three Racks, Optional Base, and Bin Boxes

These sturdy components offer our largest bin-box capacities and interlock, so no tools or hardware are needed for assembly. Choose the rack size you need and bin boxes with an open or closed front. Matching racks, bin boxes, and optional bases appear on the same line in the table below. Shipped unassembled.

Racks are 18-ga. steel with an unpainted finish. Each rack holds two bin boxes side by side. Racks that are 9″ high can be stacked up to seven high. Racks 11″ and higher can be stacked up to five high.

Bin boxes are 18-ga. welded steel with an unpainted finish. *Open-front bin boxes* offer easy access to parts. The front extends 3 1/4″; a handle is at the closed end. *Closed-front bin boxes* have a handle at both ends.

Optional bases are 14-ga. steel with an unpainted finish.

Warning! *Do not exceed load capacity of the storage unit, which may be less than the sum of the box capacities.*

Jumbo Bin-Box Racks

Oversized bin boxes allow you to easily store large parts. Racks come with bin boxes.

Racks are made of 14-ga. steel. Color is dark gray. Shipped unassembled.

Bin boxes are made of fiberglass-reinforced polyester to resist oil as well as most chemicals and solvents. They won't rust or corrode and withstand temperatures from –60° to +250° F. They have a hopper-style front that extends 4¾″, a molded hand grip, and an area for a label. **To Order:** Please specify bin-box color: gray, green, or red.

Dust-Free Wall-Mount Bin Units

Parts stay clean and dust-free with these virtually unbreakable bins. Bins are made of translucent polypropylene; outer frame is ABS plastic. All have a spring-loaded lid that stays open for easy access and snaps securely shut when not in use. Fasteners for wall mounting are included. **To Order:** Please specify outer frame color: black or light gray.

Bin-Box Carts

Our versatile carts are great for organizing and transporting items around warehouses, offices, and assembly lines. You'll get a cart and the solid-color polypropylene bin boxes specified. Shipped unassembled.

Plastic carts are made of strong yet lightweight structural polyethylene. Carts also have a push handle with compartments to hold supplies. Carts have four casters (two swivel with brakes; two rigid) with 5″ dia. polyurethane wheels. Color is light gray. **To Order:** Please specify bin-box color: blue or yellow.

Steel carts are made of 14-ga. steel and have a push handle. Carts have four casters (two rigid, one swivel, and one swivel with brake) with 3″ dia. polyolefin wheels. Color is dark gray. **To Order:** Please specify bin-box color: blue or yellow.

Bin-Box Shelving

Shelving with 96 Bin Boxes

There's a notch on the back of each bin box that catches the underside of the shelf above, so you can tilt each box to display the contents without them falling out. Shelving is 22- to 16-ga. steel and comes with polypropylene bin boxes, which have an open front for convenient access to parts and an area for labeling. Bin boxes come with a black polypropylene divider, except 4665T3 for which dividers are not available. Color is dark gray. Shipped unassembled.

To Order: Please specify bin-box color: blue, red, or yellow.

Also Available: Labels for bin boxes. Please ask for 1515T32.

Gravity-Flow Bin-Box Shelving

Single-Sided Bench Shelving with Corrugated Bin Boxes

Single-Sided Floor Shelving with Plastic Bin Boxes

Mobile Double-Sided Floor Shelving with Corrugated Bin Boxes

Angled shelves allow parts to flow forward and let you easily see and access your parts without pulling out the bin boxes. Shelving comes with bin boxes, which have an open front for easy parts access and an area for labeling. Shipped unassembled.

With Corrugated Bin Boxes— Bin boxes are 4″ Wd.×4″ Ht.×12″ Dp. and made of white corrugated cardboard. Shelving is made of dark gray 22- to 20-ga. steel. *Mobile double-sided floor shelving* includes four swivel casters with 3″ dia. polypropylene wheels. *Note:* Corrugated bin boxes are not rated for load capacity.

With Plastic Bin Boxes— Bin boxes are 4⅛″ Wd.×4″ Ht.×11⅝″ Dp., made of polypropylene and polyethylene, and have a 20-lb. capacity. Shelving is made of light gray 20-ga. steel. *Mobile double-sided floor shelving* includes four casters (two swivel; two rigid) with 5″ dia. rubber wheels. **To Order:** Please specify bin-box color: blue, red, or yellow.

Bin-Box Wire Shelving

Open-wire shelving maximizes air circulation and light penetration and will not collect dust. All shelving comes furnished with bin boxes. Shipped unassembled.

Shelving is made of 10- and 6-ga. chrome-plated steel. Legs have leveling feet to compensate for uneven floors.

Bin boxes are polypropylene and have an open front and space for a label. *Optional dividers* are black polystyrene.

Optional casters fit all shelving units. Set includes four casters (two rigid; two swivel with brake) with 5″ dia. polyurethane wheels.

To Order: Please specify bin-box color: blue or yellow, except where noted.

Wall- and Bench-Mount Bin-Box Cabinets

Clear-View Door Cabinet with 24 Bin Boxes

Place these cabinets on top of a workbench or wall mount using the six 3/8″ dia. mounting holes (fasteners not included). Cabinets are made of 22-ga. steel with 18-ga. louvered panels for hanging the included bin boxes. They have chrome-plated steel handles with a lock and two keys. Color is light gray. Welded and shipped assembled.

Bin boxes are polypropylene; they have an open-front design for convenient parts access and an area for labeling.

Clear-view door cabinets have clear plastic (PETG) paneled doors for easy viewing.

To Order: Please specify bin-box color: blue, red, or yellow.

Also Available: Labels for bin boxes. Please ask for 1515T322.

Medium Duty Low-Profile Bin-Box Cabinets

Wall- or Bench-Mount Cabinet with 42 Bin Boxes

Full-Height Cabinet with 40 Bin Boxes

At only 10″ deep, these cabinets turn a tight space into an efficient storage center. Cabinets come with bin boxes. Made of 20-ga. steel. Doors have recessed chrome-plated handles with a lock and two keys. Color is light gray. Welded and shipped assembled.

Bin boxes are polyethylene; they have an open-front design for convenient parts access and an area for labeling. *Optional dividers* are white polystyrene. **To Order:** For replacement bin boxes, please specify color: blue, green, or red.

Wall- or ***bench-mount*** cabinets can be mounted with four 1/2″ dia. keyhole slots on the back (fasteners not included).

Also Available: Labels for bin boxes. Please ask for 4903T7 and specify bin-box size.

Heavy Duty Bin-Box Cabinets

Designed to stand up to frequent use, these cabinets are made of 16-ga. steel. For added storage, the doors have removable bin boxes. Cabinets have a hasp that accepts a padlock (not included) with a maximum shackle diameter of 1/4″. Leveling feet compensate for uneven floors. Color is gray. Welded and shipped assembled.

Styles A and ***B*** have cabinet shelves that adjust on 4″ centers. ***Style A*** have bin boxes in the bottom half of the cabinet and doors. Door shelves adjust on 2″ centers. ***Style B*** have bin boxes in the doors only. ***Style C*** has bin boxes that fill up both the door and cabinet.

All bin boxes are made of polypropylene. They have an open front for convenient access to parts and an area for labeling. **To Order:** Please specify bin-box color: blue or yellow. **Also Available:** Labels for bin boxes. For 4 1/8″ wide bin boxes, please ask for 1515T322. For all others, please ask for 1512T127.

Extra-Heavy Duty Bin-Box Cabinets

Tough barely begins to describe the heaviest duty bin-box cabinets we carry. All have a hasp for a padlock (not included). Their 6″ high, 7-ga. steel legs bolt to the floor for extra stability (fasteners not included). Color is dark gray. Welded and shipped assembled.

Style D have bins in the doors and open shelves in the cabinet. ***Style E*** have bins in the doors and bottom half of the cabinet with shelves in the top half. ***Style F*** have bins that fill up the doors and cabinet.

Cabinets come in three sizes. The ***36″*** and ***48″*** wide cabinets are 12-ga. steel with 14-ga. steel shelves that adjust on 2″ centers. Hasp accepts a padlock with a maximum shackle diameter of 1/2″. Legs have 3/4″ dia. mounting holes. The ***60″*** wide cabinets are 13-ga. steel with 14-ga. steel shelves that adjust on 2″ centers. Hasp accepts a padlock with a maximum shackle diameter of 3/8″. Legs have 1/2″ dia. mounting holes.

Bin boxes are removable and made of polypropylene. They have an open front for easy access to parts and an area for labeling. **To Order:** Please specify bin-box color: blue or yellow. **Also Available:** Labels for bin boxes. For 4 1/8″ wide bin boxes, please ask for 1515T322. For all others, please ask for 1512T127.

B *14″ Wide Cabinet*

C

D

E

F

G

H

J

NSF

A ***Light duty plastic*** cabinet resists rust, dents, and moisture. Made of polypropylene. Shelf adjusts on 4¾″ centers. Cabinet doors have handles that secure with a padlock (not included) that has a maximum shackle diameter of ¼″. Color is gray. Mounting fasteners are included.

B ***Light duty steel low-profile*** cabinets are 20-ga. steel and doors are 18-ga. steel. All shelves are fixed. The *8″ wide cabinet* has two full-width shelves; the *14″ wide cabinet* has two full-width and two half-width shelves. Each cabinet has two locks for extra security, so you'll need both keys to open it (two keys per lock included). Color is tan. Cabinets have four 3/16″ dia. mounting holes (fasteners not included).

C ***Light duty steel with pegboard*** cabinet has 5³⁄₁₆″ deep doors that rest flush against the wall when fully open. Made of 24-ga. steel. One door has two fixed shelves that provide extra storage space, while the other door has a fixed tool rack and small parts tray. A steel pegboard in the back of the cabinet is 27″ Wd.×18″ Ht. and includes 12 hooks. Doors secure with a padlock (not included) that has a maximum shackle diameter of 5/16″. Color is dark gray. Mounting fasteners are included.

D ***Medium duty steel*** cabinets are available with 1, 2, 3, or 5 shelves. Made of 20-ga. steel. Have a lock with two keys. Color is light gray. Cabinets have four ⅜″ dia. mounting holes (fasteners not included).

Cabinets with adjustable shelves have one or two shelves (see table below) that adjust on 4″ centers.

E ***Medium duty steel with pegboard*** cabinets are 20-ga. steel. They have one fixed shelf and one shelf that adjusts on 4″ centers. Doors have a pegboard strip (4″ Wd.×26½″ Ht. on 5041T15; 4″ Wd.×20½″ Ht. on 5041T11). They also have a lock with two keys. Color is light gray. Cabinets have four 5/16″ dia. mounting holes (fasteners not included).

F ***Extra-wide medium duty steel*** cabinets provide lots of storage area for supplies. Cabinets are 22-ga. steel. They have two fixed shelves in each side compartment, two fixed shelves in the center compartment, and an open bottom center compartment. Color is white. Cabinets have four 5/16″ dia. mounting holes (fasteners not included).

G ***Heavy duty steel clear-view*** cabinet has doors with clear polycarbonate panels (framed in black), so you can see what is being stored. Cabinet is 20-ga. steel. Shelf adjusts on 2″ centers. Has a locking handle with two keys. Color is beige. Mounting fasteners are included.

H ***Extra-heavy duty steel*** cabinet is the strongest wall-mount cabinet we offer. Made of 12-ga. steel with two 14-ga. shelves that adjust on 2″ centers. Secures with a padlock (not included) that has a maximum shackle diameter of ⅜″. Color is dark gray. Has two mounting brackets, one on each side of the cabinet; each bracket has five ½″ dia. mounting holes (fasteners not included).

J ***Stainless steel*** cabinet is 18-ga. Type 304 stainless steel for corrosion resistance. It has a sloped top to prevent dust buildup. Shelves adjust on ½″ centers. Cabinet is NSF certified. Mounting holes must be drilled (fasteners not included).

Bench- and Counter-Height Shelf Cabinets

A 14795T33

B

C,D&F

E

G 5090T13

H

J

K

A&B ***Light duty plastic*** cabinets won't rust or corrode. All have two doors. Color is beige (unless noted). 14795T42 is polypropylene and has two shelves that adjust on 9″ centers. Handles accept a padlock (not included) with a maximum shackle diameter of 1/4″. 14795T33 is polyethylene with steel reinforcements and has one fixed shelf. Also has a lock with two keys. *Style B* is polyethylene with a corrugated polystyrene back panel. It has one fixed shelf and one removable shelf that can be positioned 15″ from the bottom. Has a lock with two keys.

C&D ***Light duty steel*** and ***light duty steel mobile*** cabinets are 24- to 22-ga. steel and have two 22-ga. shelves (unless noted) that adjust on 2″ centers. All have two doors, unless noted.

Style C have a lock with two keys. *Mobile* cabinets have four swivel casters (two with brakes) with 5″ dia. polypropylene wheels. Unassembled cabinet is tan; assembled cabinets are dark gray.

Style D have a locking handle with two keys. *Mobile* cabinets have two rigid and two swivel (with brake) casters with 5″ dia. polypropylene wheels. **To Order:** Please specify color: dark gray or tan for unassembled; light gray or tan for assembled.

E ***Light duty steel with sliding doors*** cabinets are 22-ga. steel and have one shelf that adjusts on 2″ centers, except 42″ high cabinets, which have two shelves. All have two doors and a lock with two keys. Cabinets have a textured finish. **To Order:** Please specify color: light gray or tan.

F ***Medium duty steel*** cabinets are 24- to 20-ga. steel and have two 22-ga. shelves (unless noted) that adjust on 2″ centers. All have two doors and a locking handle with two keys. **To Order:** Please specify color: light gray or tan.

Medium duty steel mobile cabinet is made of 22-ga. steel and has two shelves that adjust on 2″ centers. It has four swivel casters (two with brakes) with 5″ dia. hard rubber wheels. Has one door and a locking handle with two keys. Casters and handle are not attached. Color is light gray.

G ***Medium duty steel with work surface*** cabinets are 22-ga. steel with one fixed shelf. Both have two doors and a 1½″ thick white plastic laminated top with a 5³⁄₁₆″ high backsplash. A drawer provides additional storage for small tools and supplies (5090T14 has two drawers). Color is white.

H ***Medium duty steel clear-view*** cabinets have two doors with clear acrylic panels so you can see what is being stored. Made of 24- to 22-ga. steel with two 24-ga. shelves that adjust on 2″ centers. They have a lock with two keys. **To Order:** Please specify color: beige or dark gray.

J ***Heavy duty steel*** cabinet is made of 14- to 12-ga. steel with two 14-ga. fixed shelves. Has one door with a locking handle and includes two keys. Cabinet also has a hasp that accepts a padlock (not included) with a maximum shackle diameter of ½″. Color is light gray.

K ***Extra-heavy duty steel*** and ***extra-heavy duty steel mobile*** cabinets are made of super-strong 12-ga. steel with two 14-ga. shelves that adjust on 2″ centers. A hasp accepts a padlock (not included) with a maximum shackle diameter of ½″, except 3973T14, which has a hasp that accepts a diameter of ⅜″. All have two doors, unless noted. Color is dark gray. ***Mobile*** cabinets have two rigid and two swivel casters with 6″ dia. rubber wheels, a floor brake, and a push handle. Overall capacity for each unit is 2000 lbs. *Note:* Do not exceed the overall capacity of the unit, which may be less than the sum of the shelf capacities.

Heavy Duty Steel Storage Chests with Forklift Access

A *Without Casters Shown with Two Optional Trays*

B *With Casters*

C *Without Casters*

Demanding job-site locations are no problem for these chests. All chests have 16-gauge steel construction with raised leg supports (3″ high for *Styles A* and *B*; 3½″ high for *Style C*) for forklift access. They can be used both indoors and outdoors.

***A* Chests with Optional Trays—**These durable chests have one top and two side handles that are all recessed. They also have a single recessed locking system that accepts a padlock (padlock not included; max. padlock width of 2¼″ and max. shackle diameter of 11/32″). Color is tan.

Models with casters have four bolted-on casters (two rigid; two swivel with brakes) with polypropylene wheels. The *48″ wide chests* have 4″ dia. wheels. The *60″* and *72″ wide chests* have 6″ dia. wheels.

Optional trays are excellent for storing small parts. They measure 4″ Ht.×8″ Wd. and are designed to suspend across the top opening (front to back) of the chest. They include handles.

***B* Chests with Shelving—**For easy opening, these chests have a bi-fold lid with gas springs, which you can lift up and out of the way with one hand. Inside the chests, you'll find two fixed full-width shelves. Each shelf is 12 5/16″ deep and has a 2 9/16″ high lip.

All chests have one top and two side handles that are all recessed. They also have a single recessed locking system that accepts a padlock (padlock not included; max. padlock width of 2¼″ and max. shackle diameter of 11/32″). Color is tan.

Models with casters have four bolted-on casters (two rigid; two swivel with brakes) with 6″ dia. polypropylene wheels.

***C* Slant-Top Chests with Shelving—**The slant-top design makes it easier to reach contents from the sides of the chests. The bi-fold lid with gas springs makes it easy to lift the lid up and out of the way with one hand. Inside the chests, you'll find two full-width shelves. Each shelf is 12″ deep and has a 1″ high lip. The top shelf is fixed, while the bottom shelf is hinged so you can fold it out of the way when it's not in use.

All chests have two top handles and two recessed side handles. They also have two recessed locks that accept padlocks (padlocks not included; max. padlock width of 4¾″ and max. shackle diameter of ⅜″). Color is green.

Models with casters have four bolted-on casters (two rigid; two swivel with swivel locks) with 6″ dia. hard rubber wheels.

Heavy Duty Cabinet-Style Steel Storage Chests with Forklift Access

D *With Casters*

E *Without Casters*

F

Large doors open wide for complete visibility and easy access to all of your stored contents. All chests have 16-gauge steel construction with raised leg supports (3″ high for *Styles D* and *E*; 3½″ high for *Style F*) for forklift access. They can be used both indoors and outdoors.

***D&E* Chests with Full-Width and Half-Width Shelving—**All chests have one handle per set of doors and two side handles that are all recessed. They also have a single recessed locking system for each set of doors that accepts a padlock (padlock not included; max. padlock width of 2¼″ and max. shackle diameter of 11/32″). Color is brown.

Models with casters have four bolted-on casters (two rigid; two swivel with brakes) with 6″ dia. polypropylene wheels.

(D) Chests with full-width shelving have three full-width shelves inside the chest. The two top shelves are fixed. The bottom shelf is adjustable on 3″ centers. The *two-door model* has one set of doors on the front of the chest. The *four-door model* has one set of doors on the front as well as on the back of the chest for dual entry.

(E) Chests with half-width shelving have three fixed shelves on the left side of the chest. The right side has a 28″ Wd.×19¾″ Dp.×57″ Ht. open space for storing large items.

***F* Ventilated Chest with Full-Width Shelving—**Mesh steel sides and back not only provide ventilation, but also allow you to easily see your stored items. Inside the chest you'll find two fixed, full-width shelves. Each shelf has a 1″ high lip. Inside each door are five fixed shelves (4″ deep with 1″ high lip) with a total of 46 individual compartments. There's also a 6″ wide base extension with two support bars on one outer side to store large items such as brooms and shovels. Chest has a single recessed locking system that accepts a padlock (padlock not included; max. padlock width of 4¾″ and max. shackle diameter of ⅜″). Furnished with four bolted-on casters (two rigid; two swivel with brakes) with 6″ dia. hard rubber wheels. Color is green.

Steel Chests

All of these chests are suitable for indoor and outdoor use.

A&B Standard Chests—Also known as foot lockers, these chests have two side handles (unless noted) and a padlockable hasp (padlock not included; maximum shackle diameter of 3/8″).

Style B also has two lid snaps and a removable tote tray.

C Floor-Mountable Chest—Furnished with baseplates that can be installed on most flat surfaces, this chest can be permanently or temporarily anchored in one place. For stationary use, place the chest on the baseplates and turn the locking rods inside the chest. The chest is now anchored. For portable use, simply unlock the rods to remove the chest and take it anywhere it's needed. Fasteners for mounting the baseplates are included.

Chest has two side handles and a sliding, removable small-parts tray. The lid has a key lock with two keys.

D Fold-Down-Door Chests—Often used for the underbed of a truck (fasteners not included), the door on these chests folds down and is suspended in an open position by coated galvanized-steel aircraft cable. An EPDM gasket around the door opening keeps moisture and dust out. All have a three-point locking system with keyed, recessed T-handle and two keys. Inside height is 12 3/4″.

♦ Furnished with a top handle.

Marine-Grade Fiberglass Chests

With Optional Rubber Feet

Tough enough for use in demanding saltwater marine environments, all of the latches, hinges, and hardware are stainless steel. The latches are padlockable (padlock not included; max. shackle diameter of 5/16″). Furnished with two gas springs (except for 8579A54, which only has one) to make it easier for you to lift the lid. Color is white.

Optional rubber feet are 1″ high and include mounting fasteners. Color is white.

Aluminum Chests

6622A6, A3, and A4

Lightweight as well as rugged, these chests have an attractive, bright satin finish. For indoor and outdoor use.

16-ga. models have a locking center draw latch with two keys as well as one heavy duty draw latch on each side of the center draw latch. Furnished with a stainless steel wire lid-stay and one handle on each side.

11-ga. models have a padlockable center hasp (padlock not included; max. shackle dia. of 5/16″) as well as twist locks (one on each side of the center hasp for 6622A5; two on each side of the center hasp for 6622A6, A3, and A4). All come furnished with a chain lid-stay and two handles on each side.

Corrosion- and Impact-Resistant Chests

In addition to being rust and dent resistant, these chests are also lightweight. For indoor and outdoor use.

E Structural Foam Chests—With greater strength and higher impact resistance than other plastic chests, structural-foam chests are only exceeded by metal for strength. All have two padlock hasps (padlocks not included; maximum shackle diameter of 3/8″) and two molded-in side handles.

Model 45205T66 also has a molded-in key lock that comes furnished with two keys.

F Rolling Structural Foam Chest—Similar to the Structural Foam Chests above, but with a 12 3/4″ long fold-down handle and two 6″ Dia.× 1 1/2″ Wd. rubber wheels for easy mobility. It has one recessed latch, a padlock hasp (padlock not included; maximum shackle dia. of 3/8″), and two molded-in side handles.

G Polyethylene Chests—Have a center-lock latch that can be padlocked (padlock not included; max. shackle dia. of 1/4″).

About Safety Cabinets for Flammables and Combustibles

Our cabinets provide a secure location for hazardous liquid materials. We offer them with hinged doors, self-closing hinged doors, and self-closing sliding doors. Hinged doors close manually. Self-closing doors close automatically but have fusible links that can be used to hold doors open. A high temperature melts the fusible links, causing doors to automatically close.

Since the Uniform Fire Code requires the use of cabinets with self-closing doors in some cities, counties, and states, we recommend that you check your local fire codes.

All our metal safety cabinets meet OSHA requirements and conform to National Fire Protection Association (NFPA) Code 30 requirements, except where noted. Additionally, many of our cabinets carry Factory Mutual (FM) approval.

Class I—Flammables	***Class II—Combustibles***	***Class III—Combustibles***
Flash Point: Below 100° F	**Flash Point:** 100° to 139° F	**Flash Point:** 140° F and Up
Examples:	**Examples:**	**Examples:**
• Acetone	• Nos. 1 and 2 Fuel Oil	• Ethylene Glycol
• Gasoline	• Kerosene	• Glycerin
• Methyl Alcohol		
• Turpentine		

When storing flammable and combustible liquids in a cabinet, the combined total of Class I and Class II liquids should not exceed 60 gallons; the total of all Class I, Class II, and Class III liquids should not exceed 120 gallons.

To select the proper size cabinet, you first need to determine whether your liquid is flammable (Class I) or combustible (Class II or Class III). The flash point of your liquid (see the guide above) classifies it as flammable or combustible. If the liquid you plan to store is not shown on the scale we've supplied, please check the liquid's MSDS (Material Safety Data Sheet) to find the flash point.

We've provided can capacities per shelf based on standard can sizes.

Safety Cabinets for Flammables and Combustibles

Full-Height Cabinet with Hinged Doors and Three Shelves

Counter-Height Cabinet with Self-Closing Sliding Door

Bench-Height Cabinet with Self-Closing Hinged Doors

Safely store flammables and combustibles (not recommended for acids; see page 1623 for cabinets for acids). Cabinets are made of 18-ga. steel and have double-wall construction with 1½″ of air space between walls.

Shelves are adjustable. Cabinets include a connection for a ground wire and capped vents with built-in flash arrester. The doors have piano (continuous) hinges, a three-point latch, and a locking handle with two keys. Handle also has a hasp that accepts a padlock (not included) with a max. shackle dia. of ⅜″, unless noted. Door sills are raised at least 2″ to contain spills. Leveling feet compensate for uneven floors.

Cabinets are yellow and marked with a ″Flammable: Keep Fire Away″ label on the front. They meet NFPA Code 30 and OSHA requirements and are FM approved, unless noted. Welded and shipped assembled.

Cabinets ***with self-closing doors*** have fusible links that melt at 165° F, causing doors to close automatically.

● Includes bottom shelf. ■ Does not have a hasp for a padlock. ★ Not FM approved.

For information about safety cabinets for flammables and combustibles, see page 1620.

Wall-Mount and Bench-Top Safety Cabinets for Flammables and Combustibles

Similar to the Safety Cabinets for Flammables and Combustibles on the previous page, these provide the same storage protection for smaller quantities. Not recommended for nitric or sulfuric acids. Cabinets are made of 18-ga. steel and have double-wall construction with 1½″ of air space between walls.

Shelves are adjustable, except bottom shelf. Cabinets have a connection for a ground wire and capped vents with built-in flash arrester. Doors have piano (continuous) hinges, three-point latch, and a locking handle with two keys. Handle also has a hasp that accepts a padlock (not included) with a max. shackle dia. of ⅜″, unless noted. Door sills are raised at least 2″ to contain spills. Cabinets are yellow and marked with a "Flammable: Keep Fire Away" label on the front. They meet NFPA Code 30 and OSHA requirements and are FM approved, unless noted. Welded and shipped assembled.

Wall-Mount Cabinet with Hinged Doors

Bench-Top Cabinet with Hinged Door

Wall-mount cabinets can also be stacked up to two high. *Note:* Only stack cabinets with the same width and depth dimensions.

Bench-top cabinets have leveling feet for uneven surfaces.

Cabinets ***with self-closing hinged doors*** have fusible links that melt at 165°F, causing doors to close automatically.

Mobile Safety Cabinets for Flammables and Combustibles

Easily move your stored flammables and combustibles from place to place. Not recommended for nitric or sulfuric acids. Cabinets are made of 18-ga. steel and have double-wall construction with 1½″ of air space between walls.

Shelves are adjustable, except bottom shelf. Cabinets include a connection for a ground wire and capped vents with built-in flash arrester. Doors have piano (continuous) hinges, a three-point latch, and a lock with two keys. Door sills are raised at least 2″ to retain spills. Have two rigid and two swivel casters with 4″ dia. polyolefin wheels. Cabinets are yellow and marked with a "Flammable: Keep Fire Away" label on the front. Meet NFPA Code 30 and OSHA requirements and are FM approved. Welded and shipped assembled.

Cabinets ***with self-closing hinged doors*** have fusible links that melt at 165°F, causing doors to close automatically.

Safety Cabinets for Flammables and Combustibles in 55-Gallon Drums

Vertical Storage Cabinet (With Optional Spill Control Pallet)

Horizontal Storage Cabinet (With Optional Drum Stand)

Perfect for storing and securing 55-gallon drums. Made of 18-ga. steel and have double-wall construction with 1½″ of air space between walls. All include a connection for a ground wire and capped vents with built-in flash arrester. The two doors have piano (continuous) hinges; cabinets have a three-point latch and a locking handle with two keys. Door sills are raised at least 2″ to retain spills. Leveling feet compensate for uneven floors. Color is yellow. Meet NFPA Code 30 and OSHA requirements. Welded and shipped assembled.

Cabinets ***with self-closing hinged doors*** have fusible links that melt at 165°F, causing doors to close.

Vertical Storage Cabinets— Roller bearings on the inside bottom make loading and removing cans and drums quick and easy. All have an adjustable shelf for storing 5-gallon cans; shelf is made of galvanized steel for added corrosion resistance. Cabinets have "Flammable: Keep Fire Away" and "Hazardous Waste" labels on the front. All are FM approved.

An *optional spill control pallet* (sold separately) can be placed under cabinets for extra spill containment. Made of polyethylene. Pallets are 6¼″ high and bring vertical storage cabinets into compliance with EPA 40 CFR 264.175 and Uniform Fire Code 7901.8.5.

Horizontal Storage Cabinets— Cabinets have a track to guide an *optional drum stand* (sold separately) into position as well as space for a drip can. All are marked with a "Flammable: Keep Fire Away" label on the front. The handle also has a hasp that accepts a padlock (not included) with a max. shackle dia. of ⅜″.

Optional Ramp— Made of steel. Use this 24½″ Wd.×28″ Dp. ramp for more efficient loading and unloading. Color is yellow.

Outdoor Cabinets for 55-Gallon Drums

Two-Drum Polyethylene Cabinet

Three-Drum Steel Cabinet

Keep your workplace safe and free up valuable floor space by storing drums outdoors. A secondary reservoir holds leaks from damaged drums and has removable grating for easy sump cleaning. All cabinets have forklift channels.

Polyethylene Cabinets— All are weatherproof and UV resistant. The roll-top door is ideal when there isn't room for swing-open doors. Doors lock with a padlock (not included); shackle must be at least 1″ long with a maximum diameter of 5⁄16″. Cabinets are yellow; door is gray. Removable grating is black polyethylene. Shipped unassembled.

Steel Cabinets— Made of 16-ga. steel and have double-wall construction with 3″ of air space between walls. They have static-grounding connections (two inside, two outside), air vents, and an explosion-relief panel on the rear wall, which releases at 20 lbs. per sq. ft. Each has a fully hinged door, a locking handle with two keys, and an adjustable anchor rod to hold door open. Color is gray. The removable grating is made of galvanized steel. Four bolt-down plates with ⅞″ mounting holes allow anchoring. Meet NFPA Code 30 and OSHA requirements and are FM approved. Welded and shipped partially assembled.

Self-Closing Door Conversion Kits for Safety Cabinets

Kit for Two-Door Cabinets

Use these kits to convert most hinged safety cabinets into a cabinet with self-closing hinged doors. They have fusible links that melt when temperatures reach 165°F, causing doors to close automatically. When properly installed, kits help you to comply with city, county, or state Uniform Fire Codes that require self-closing hinged doors. All parts and installation templates are included. Can be used on FM approved cabinets.

Kit for One-Door Cabinets— Fits cabinet sizes: 17″ Wd.×22″ Ht.×17″ Dp.; 23¼″ Wd.×35″ Ht.×18″ Dp.; and 24″ Wd.×44″ Ht.×18″ Dp.

44775T24 ..... **Each** $77.58

Kit for Two-Door Cabinets— **To Order.** Please specify cabinet size: 34″ Wd.×65″ Ht.×34″ Dp.; 35″ Wd.×35″ Ht.×22″ Dp.; 43″ Wd.×44″ Ht.×12″ Dp.; 43″ Wd.×44″ Ht.×18″ Dp.; and 43″ Wd.×65″ Ht.×18″ Dp.

44775T25 ..... **Each** $199.48

Refrigerators and Freezers for Flammables

Refrigerator

Definitely not your typical household appliances—these are built for long-lasting safety and service in your laboratory or plant. Exterior is steel with a white finish; interior is easy-to-clean plastic. The doors and sides are filled with polyurethane foam insulation for energy efficiency. Shelves are removable and adjustable. Both have a 6-ft. power cord with three-prong plug. Both meet OSHA requirements and are UL listed. Overload, relay, and thermostat are totally enclosed. Shipped assembled.

The ***refrigerator*** runs on 2.5 amps; operates on 115 VAC, 60 Hz; and meets NFPA Code 99. Shelves adjust on 1¾″ centers. The ***refrigerator/freezer*** runs on 1.9 amps; operates on 120 VAC, 60 Hz; and meets NFPA Code 45 and Code 99. Shelves adjust on 1½″ centers.

Overall Size, Wd.×Ht.×Dp.	Cap., cu. ft.	Temp. Range of Refrigerator	Temp. Range of Freezer	No. of Shelves	No. of Doors	Defrost		Each

Safety Cabinets for Acids/Corrosives

Protect your work environment from moderate and flammable corrosives. Cabinets are 18-ga. steel and have double-wall construction with 1½″ of air space between walls. They include polyethylene shelf-liner trays. Use cabinets with the Optional Polyethylene Cabinet (sold separately) and you can store harsher liquids, such as hydrochloric, nitric, phenol, or sulfuric acids.

All shelves are adjustable, except bottom shelf. Cabinets include a connection for a ground wire and capped vents with built-in flash arrester. They have a three-point latch and a locking handle with two keys and a hasp for a padlock (not included) with a max. shackle dia. of ⅜″. Door sills are raised at least 2″ to contain spills. Cabinets are blue and are marked with an "Acid" label. Meet NFPA Code 30 and OSHA requirements and are FM approved, unless noted. Welded and shipped assembled.

Cabinets ***with hinged*** and ***self-closing hinged doors*** have doors with piano (continuous) hinges. Cabinets ***with self-closing doors*** have fusible links that melt when temp. reaches 165°F, causing doors to close automatically.

Optional Polyethylene Cabinet— Use inside 43″ wide cabinets (except 9988T12) to separate acids or add corrosion resistance. Cabinet is blue and marked with an "Acids/Corrosives" label. Shipped assembled.

Plastic Safety Cabinets for Acids/Corrosives

Safely store the harshest liquids and provide superior protection from corrosion—even acid vapors. Doors lock with a padlock (not included) with a max. shackle diameter of 5⁄16″. Shipped assembled.

Bench Top— Cabinet is made of white polypropylene and is safe for clean rooms. Has a polypropylene door hinge and a 2″ well in the base to contain spills. Marked with an "Acids/Corrosives" label.

Bench Height— Cabinet is made of blue polyethylene and includes capped vents. A divider separates the interior into two compartments, and a grooved top doubles as a work surface. Two half-width shelves adjust on 2¼″ centers, and molded shelves on the inside of the doors are handy for storing small containers. Cabinet has two removable trays (one on each side) to catch small spills, and leveling feet to compensate for uneven floors. Includes two labels, "Acid" and "Corrosives."

Storage Cabinets for Gas Cylinders

Avoid dangerous rolling or tipping of volatile gas cylinders. These cabinets have fixed shelves (where applicable). Doors have welded hinges and a hasp for a padlock (not included); shackle must be at least 2″ long with a maximum diameter of ¼″ for steel cabinets and 1″ for aluminum cabinets. All include either a "Flammable: Keep Away From Flame" or "Flammable: Keep Fire Away" label. Meet OSHA 1910.110 and NFPA 58 requirements.

Cabinets for horizontal storage have slotted shelves. *Cabinets for vertical storage* have solid shelves (where applicable).

Steel cabinets have 16- to 13-ga. expanded metal sides, a solid 12-ga. steel top, and a 3⁄16″ thick steel frame, unless noted. Each foot has a 9⁄16″ bolt hole for mounting to the floor. Color is yellow. Choose unassembled or welded and assembled cabinets.

Aluminum cabinets are corrosion resistant. Made of 14-ga. solid aluminum with a 1⁄16″ thick aluminum frame. Each foot has a ½″ bolt hole for mounting to the floor. Cabinets are welded and shipped assembled.

Adjustable Standards, Shelf Brackets, and Shelves

Light Duty Standard ***Heavy Duty Standard***

Unlike shelf brackets alone, these single-slotted standard and bracket combinations let you easily adjust the spacing between shelves. Simply mount the standards to wall studs, and add brackets with the same duty rating (light or heavy) and material, and your choice of shelves.

Type 304 stainless steel has excellent corrosion resistance. Ideal for food-service areas and corrosive environments. All have a satin finish.

Standards

All have mounting holes on 12″ centers. *Light duty standards* have 9/16″ Ht.×1/8″ Wd. slots on 1″ centers. Mount with #8 screws (not included). *Heavy duty standards* have 1 1/16″ Ht.×1/8″ Wd. slots on 2″ centers. Mount with #10 screws (not included).

To Order: For steel standards, please specify zinc plated or white.

Versatile-Mount Standards and Shelf Brackets

We know it's not always easy to find wall studs; that's why we offer these standards that can be mounted to a wall or hung from a specially designed bracket or track.

Hanging Bracket for Standards— Made of 13-ga. galvanized steel, this bracket can be mounted to a top plate or joist and allows you to hang a standard. Mounting screws included.

Hanging Tracks for Standards— Made of 14-ga. galvanized steel, these tracks can be mounted to studs or a top plate and allow you to quickly hang standards at any point along their length. Mounting holes are on 8″ centers. Mount with #10 screws (not included).

Standards— Made of 14-ga. galvanized steel. Standards have 9/16″ Ht.×1/8″ Wd. slots on 1″ centers. Mounting holes are on 12″ centers. When mounting to a wall, use #10 screws (not included). Standards also have an angled back slot so you can attach them to the hanging track.

Shelf Brackets— All easily attach to standards. *Brackets without brace* are made of 14-ga. galvanized steel. *Brackets with brace* are made of 16-ga. galvanized steel and support heavier loads.

Wall-Mount Shelving with Solid Shelves

The solid shelf of this unit has seamless construction, a 1½″ high backsplash, and a rolled front edge, leaving bacteria nowhere to hide.

Shelving is made of 18-ga. steel. All shelving is corrosion resistant. ***Type 304 stainless steel*** is perfect for food-service areas as well as food-processing and chemical plants.

Shelving up to 72″ wide includes two wall brackets with four 5/16″ dia. mounting holes. Shelving 84″ to 108″ wide includes three wall brackets with six 5/16″ dia. mounting holes. 120″ wide shelving includes four wall brackets with eight 5/16″ dia. mounting holes. Mounting fasteners not included.

All shelving is NSF certified. Shipped unassembled.

Wall-Mount Shelving with Wire Shelves

Providing better ventilation and light penetration than solid shelves, the wire shelves of this unit also minimize dust buildup. Ideal for food-service areas, pharmaceutical plants, and clean rooms.

Shelving consists of two 1″ OD, 16-ga. posts with circular grooves every 1″ for easy shelf adjustment.

One-shelf units include four wall brackets, ***two-shelf*** units have six wall brackets, and ***three-shelf*** units have eight wall brackets. Each bracket has two 11/32″ dia. mounting holes. Mounting fasteners not included.

Shelving is NSF certified and meets MIL-S-40144E. Shipped unassembled.

Note: The overall capacity for each unit is 250 lbs.

Low-Profile Shelving

Polyethylene

Aluminum and Type 304 Stainless Steel

Chrome-Plated Steel and Type 304 Stainless Steel Wire

Also known as dunnage racks, this shelving is perfect for storing bulky items just off the floor. All except the polyethylene have an open design that increases air circulation and minimizes dust collection. Shelving is NSF certified.

Polyethylene shelving has one-piece construction that is easy to wash or steam clean. Its slotted openings allow slight air circulation. Color is light gray. Shipped assembled.

Aluminum and ***Type 304 stainless steel shelving*** have all-welded construction. Shipped assembled. *Aluminum shelving* is made of 1½″ Wd.×1¾″ Ht. rectangular tubing. *Type 304 stainless steel shelving* is made of 1″ square, 18-ga. tubing.

Chrome-plated steel and ***Type 304 stainless steel wire shelving*** have 1″ OD, 16-ga. legs with leveling feet to compensate for uneven floors. Legs also have grooves every 1″ that allow you to adjust the height of the shelf. Shipped unassembled.

Light Duty Mobile Steel Shelving

Open Shelving with 1¼″ High Shelf Lip

Lipped Shelf — Flush-Surface Shelf

Keep your stored materials on the move with this mobile shelving. Its tubular steel push handle, two rigid casters, and two swivel casters provide easy maneuvering. All but the bottom shelf can be flipped and converted from a lipped shelf to a flush-surface shelf. Shipped unassembled.

Shelving with 1¼″ high shelf lip has 5″ dia. hard rubber wheels. Shelving is steel and has 13-ga. angle posts and 20-ga. shelves that adjust on 1″ centers (bottom shelf is 18 ga. and fixed) and attach with included nuts and bolts. Color is light gray.

Shelving with 3″ high shelf lip has 5″ dia. polypropylene wheels. Shelving is steel and has 16-ga. ribbed angle posts and 18-ga. shelves that attach with included nuts and bolts. Shelf spacing is 13¾″. You can add one extra shelf to create a five-shelf unit that has shelf spacing of 9¼″. Color is dark gray.

Open shelving has no back or side panels, providing easy access to materials and allowing it to carry loads that extend beyond the shelves. *Shelving with a 1¼″ high shelf lip* also includes side braces.

Closed shelving has 24-ga. back and side panels to keep materials better contained.

Extra shelves include nuts and bolts.

Note: Do not exceed the overall capacity of the unit, which is less than the sum of the shelf capacities.

Light Duty Mobile Shelving and Trays

Aluminum Wide Opening with Trays (Sold Separately)

Steel Narrow Opening with Trays (Sold Separately)

Also known as bakery carts, this mobile shelving is designed for efficiency—the two open sides allow you to load and unload from either end. Put them to work in food-service areas as well as small parts and electronics assembly operations. Choose from narrow opening and wide opening styles. NSF certified. Shipped unassembled.

Aluminum shelving has a high-strength, 1″ square aluminum frame and four swivel casters (two have brakes) with 5″ dia. rubber wheels. The slide assemblies are removable for cleaning.

Steel shelving is zinc-plated with a 1″ OD tubular frame and wire tray sides. Shelving has four swivel casters with 5″ dia. rubber wheels.

Removable trays are sold separately below.

4641T57 ..... **Each** $4.84

Optional Doors—For use with all units. Doors are made of 20-ga. steel and fit on the included welded frame. Color is dark gray. Set includes mounting frame, two doors, a handle, lock, two keys, and fasteners.

4641T26 ..... **Per Set** $197.74

Medium Duty Counter-Height Steel Shelving

Use this versatile, low-height shelving as a bookcase or for counter space. Made of steel, each unit has 13-ga. angle posts, 18-ga. shelves with 13-ga. reinforcements, and 24-ga. back and side panels. Shelves are reinforced for added strength and attach with included fasteners. Three of the shelves have 34″ wide label holders for quick identification of stored materials. The middle two shelves adjust on 1½″ centers. Shelving is dark gray with white back and side panels. Shipped unassembled.

Extra shelves come with fasteners.

Medium Duty Easy-to-Assemble Plastic Shelving

Our most rugged all-plastic shelving, this high-density polyethylene unit will not rust, dent, peel, or chip. Assembles in a flash with no tools needed—just snap the 2 5/16″ OD tubular posts into place in the slotted openings. Made of chemical-resistant material, this shelving is a safe choice for storing corrosive liquids. Shelves are fixed, spaced 21½″ apart, and vented to prevent moisture and dust buildup. Color is black. Shipped unassembled.

Medium Duty Easy-to-Assemble Steel Shelving

Open Shelving Complete Unit

Open Shelving Add-On Unit with Cross Braces (Sold Separately)

Shelving with Wire Mesh Panels

Closed Shelving with Optional Shelf Dividers, Doors, Drawers, and Shelf Front

Shelf Clip Lugs

No nuts, bolts, or clips required—the uprights come assembled and shelves quickly snap into place.

Uprights consist of two 18-ga. tubular steel posts with side braces for support. The shelves attach to clip lugs punched into the upright posts. Shelves are made of 20-ga. steel, are reinforced for extra strength, and adjust on 2″ centers. They can be tilted at a 6° or 12° angle to allow items to flow forward for easier access. Color is light gray. Shipped unassembled.

Open shelving allows you to easily see and access your stored materials.

Shelving with wire mesh panels has side and back panels that allow you to see what's being stored while keeping materials better contained. Panels are made of 10-ga. galvanized steel wire with 2″ square openings.

Closed shelving has 22-ga. galvanized steel back and side panels to keep materials better contained.

Complete units come with back cross braces for added support.

Add-on units come with one upright and six shelves. They attach to a complete unit. Cross braces for add-on units are sold separately below.

Note: When connecting multiple shelving units, order one pair of cross braces for every third shelving unit.

Heavy Duty Steel Shelving

Reinforced Shelves

With a heavy-gauge steel construction, this shelving is designed to take on heavier loads than our light and medium duty shelving. The posts are made of 15-ga. steel. Choose from 20- and 18-ga. steel shelves. They're reinforced for extra strength, attach to posts with included clips, and adjust on 1½″ centers. Color is light gray. Shipped unassembled.

Open shelving allows you to easily see and access your stored materials. It comes with side and back cross braces for added support. ***Closed shelving*** has 22-ga. steel side and back panels to keep materials better contained.

Add-on units consist of two posts and six shelves. They attach to a complete unit.

Extra shelves include shelf clips.

Shelf dividers adjust on 3″ centers. Dividers are made of 22-ga. steel and are light gray. Divider clips included.

Single-drawer support clips snap onto posts and hold a single drawer (four clips required per drawer).

Multiple-drawer support guides attach to the shelving posts with the included bolts. Any combination of drawers can be used with one set of guides as long as the sum of the overall drawer height equals 18″ or 36″ (depending on the guide you choose).

Drawers are for use with 36″ wide shelving, and they open and close smoothly on ball-bearing rollers. Load capacity is 400 lbs. per drawer. Use with drawer support clips or guides (required; sold separately). Drawers are made of 18-ga. steel. Color is light gray.

Divider sets partition drawers into as many as 24 compartments. Dividers are made of 22-ga. steel and are light gray.

Heavy Duty Mobile Steel Shelving

A 3,000-lb. capacity makes this the heaviest duty mobile shelving we carry. The all-welded construction consists of 3/16″ thick angle posts and 12-ga. steel shelves. Choose from shelves with a 1½″ high lip and shelves without a lip. Space between shelves is 15″ for units with four shelves and 11″ for units with five shelves.

All have a push handle and move on two rigid and two swivel casters with 8″ dia. phenolic wheels. Color is dark gray. Shipped assembled.

Note: Do not exceed the overall capacity of the unit, which is less than the sum of the shelf capacities.

★ Includes top and bottom shelf.

Heavy Duty Wire Shelving

Stationary Shelving

Adjustable Shelving

Quick-Adjust Shelving

Mobile Shelving

The wire design of this sturdy shelving minimizes dust collection and provides good ventilation and light penetration.

Shelves are made of 10-ga. wire with 6-ga. support wire and adjust on 1″ centers. All shelving is NSF certified and meets MIL-S-40144E. Shipped unassembled.

Zinc-plated steel and *chrome-plated steel* provide good rust and corrosion resistance. All posts are chrome-plated steel. Posts are made of 1″ OD, 16-ga. tubular steel.

Type 304 stainless steel is an excellent choice for pharmaceutical, food processing, and clean room applications. Posts are made of 1″ OD, 18-ga. tubular steel.

Adjustable Shelving— Shelving includes split sleeves, which snap together onto the posts and hold the shelves in place. **Also Available:** Extra shelves with sleeves. To order, please ask for 5101T8 and specify shelf material (zinc-plated, chrome-plated, or stainless steel) and size (Wd.×Dp.).

Quick-Adjust Shelving— Levers at each corner of the shelf frame allow shelving to be adjusted more quickly and easily. Shelving includes split sleeves, which snap together onto the posts and hold the shelves in place. With a push of the quick-adjust lever, the shelf is locked onto the sleeves, securing it to the post. **Also Available:** Extra shelves with sleeves. To order, please ask for 5101T9 and specify shelf material (chrome-plated or stainless steel) and size (Wd.×Dp.).

Stationary Shelving— Units have leveling feet on the bottom of the posts to compensate for uneven floors.

Mobile Shelving— Units have four swivel casters (two with brake) with 5″ dia. polyurethane wheels. Casters add 6⅛″ to height. Overall unit capacity is 1,200 lbs. Note: Do not exceed the overall capacity of the unit, which is less than the sum of the shelf capacities. **Also Available:** Extra casters. For swivel casters, please ask for 5101T47. For swivel casters with brakes, please ask for 5101T48.

Accessories are sold separately on page 1633 and can be used with all adjustable and quick-adjust shelving except where noted.

Also Available: Extra posts. For posts for stationary shelving, please ask for 5101T25. For posts for mobile shelving, please ask for 5101T6. Specify material (chrome-plated or stainless steel) and post height.

Accessories

Side and Back Ledges— Prevent items from falling off your shelves with these 4″ high chrome-plated steel ledges. Order by the depth of your shelf for side ledges; by the width of your shelf for back ledges.

Ledge Length		Each	Ledge Length		Each
18″	5101T11	$11.21	48″	5101T19	$20.17
24″	5101T13	12.49	60″	5101T21	21.46
36″	5101T15	16.01	72″	5101T23	25.93

Tote Boxes and Tote Box Slides— *Tote boxes* hang from your shelving for versatile storage. Boxes are 17½″×22½″ and made of gray polypropylene. They can be used with either slide (use one slide per box). *Slides* are made of a one-piece aluminum sheet and enclosed on the top to protect contents from dust. They mount to the bottom of 18″ or 24″ deep shelves with the included support brackets.

Tote Box and Slide

Heavy Duty Coated-Steel Wire Shelving

Stationary Shelving

Quick-Lock Shelf Clip

Mobile Shelving

An epoxy coating on the shelves makes them chemical, rust, and corrosion resistant. Their open-wire design provides excellent ventilation and light penetration with minimal dust collection. With quick-lock shelf clips that attach shelves to the posts, shelving is easy to assemble—no need for tools or fasteners. You can also reposition or add a shelf without moving the other shelves. Posts are 1″ square and made of 16-ga. steel. A plastic cap on the top of each post provides a finished appearance. Shelves are made of 10-ga. wire with 4-ga. support wire and a 12-ga. frame. They adjust on 3″ centers. NSF certified. Shipped unassembled. *Note:* Not rated for food contact.

To Order Please specify color: white or light gray.

Stationary shelving has leveling feet to compensate for uneven floors. ***Mobile shelving*** has two rigid casters and two swivel casters with brakes; all casters have 5″ dia. polyurethane wheels. They add 6¼″ to the overall height. Overall unit capacity is 1,200 lbs. *Note:* Do not exceed the overall capacity of the unit, which is less than the sum of the shelf capacities.

Extra shelves include quick-lock shelf clips.

Heavy Duty Mobile Three-Sided Steel Wire Shelving

Zinc-plated steel wire panels on the back and sides keep your packages safely on board. Shelving consists of 16-ga., 1″ square steel posts with 3″ square open-wire grid back and side panels. Shelves are made of 8-ga. zinc-plated steel wire and a 12-ga., 1″ square steel frame. They adjust on 2″ centers. Shelving includes sleeves that slide onto the posts and hold the shelves in place. Units have four swivel casters with brakes and 5″ dia. polyurethane wheels. Shelving is NSF certified and shipped unassembled. *Note:* Do not exceed the overall capacity of the unit, which is less than the sum of the shelf capacities.

Extra shelves include sleeves.

Heavy Duty Antimicrobial-Plastic Shelving

Stationary Shelving

Quick-Adjust Lever

Mobile Shelving

Shelves have built-in antimicrobial protection to inhibit the growth of bacteria, mold, mildew, and fungi—perfect for use in food service areas and laboratories. They're also vented for good air circulation and light penetration, preventing moisture buildup and minimizing dust collection. For easy cleaning, the shelf surface can be removed in 12″ or 18″ pieces while the unit is assembled and is dishwasher safe.

Shelves consist of a light blue, vented polypropylene surface that snaps onto a ¼″ OD dark gray epoxy-coated steel wire frame. Posts are made of tubular 13-ga. light gray epoxy-coated steel. Shelving comes with sleeves that snap onto the posts. Quick-adjust levers at each corner of the shelf frame lock onto sleeves to hold shelves in place and allow for easy adjustment on 1″ centers. NSF certified. Shipped unassembled.

Stationary shelving has leveling feet to compensate for uneven floors. ***Mobile shelving*** comes with four swivel casters (two with brake) with 5″ dia. polyurethane wheels. Casters have protective bumpers and add 6″ to overall height. Overall unit capacity is 1,200 lbs. *Note:* Do not exceed the overall unit capacity, which is less than the sum of the shelf capacities.

Extra shelves include sleeves. ***Shelf dividers*** are 8″ high and made of light gray epoxy-coated steel. ***Shelf label holder*** is 4″ Wd.×1½″ Ht. and made of light gray plastic. It snaps onto the front of the shelf.

Heavy Duty Gravity-Flow Steel Shelving

The 15° slope of these shelves allows items to flow forward, providing easier access and better visibility. Shelves also have a 5/8″ high front lip and 1 1/2″ high side guards to keep parts from falling off.

No tools are needed for assembly. Each upright consists of two 20-ga. galvanized steel posts with support braces. Posts have two 1/4″ holes for floor mounting (fasteners not included). Horizontal beams lock onto the uprights with three-prong connectors to hold the shelves in place. Shelves are made of 20-ga. steel, reinforced for extra strength, and adjust on 2″ centers. They can be removed while the unit is still assembled, allowing for easy cleaning. Shelving is light gray and shipped unassembled.

Add-on units come with one upright and the appropriate number of shelves. They attach to one of the uprights on the complete unit.

Extra shelves include beams with three-prong connectors.

Optional casters are for use with 60″ high shelving. They have 6″ dia. polyurethane wheels and add 7 1/4″ to overall height.

Heavy Duty Aluminum Shelving

Well suited for food service areas and freezers, this lightweight, corrosion-resistant aluminum shelving has two-piece shelves, so you can remove the shelf surface for cleaning while the unit is still assembled. The shelf surface is made of 0.040″ thick aluminum and fits onto an aluminum channel frame. Shelves are almost infinitely adjustable—they attach to the 0.150″ thick, 1 5/16″ OD posts with stainless steel set screws (included). NSF certified. Shipped unassembled.

Extra shelves include set screws.

Optional swivel caster with brake has a 5″ dia. polyolefin wheel and adds 6″ to overall height. Capacity is 300 lbs. per caster.

Extra-Heavy Duty Steel Wire Shelving

Split Sleeves

Optional Floor Plate

Choose this chrome-plated steel wire shelving for your heavyweight storage needs. Wire shelving provides good ventilation and light penetration with minimal dust collection. Posts are 1″ OD, 16-ga. steel with grooves that allow shelves to adjust on 1″ centers. Split sleeves snap together onto the posts and hold the shelves in place. The shelf surface is made of 5/16″ dia. steel wire. It snaps onto a frame made of 1″ square, 16-ga. steel and is removable for easy cleaning. Posts have leveling feet to compensate for uneven floors. NSF certified. Shipped unassembled.

Extra shelves include split sleeves.

Optional floor plate secures the shelving to the floor for greater stability. Plate is made of zinc-plated steel and has three 5/16″ dia. mounting holes (fasteners not included).

Extra-Heavy Duty Steel Shelving with Roll-Out Shelves

Three Shelves

Unique high-capacity, roll-out shelves make it easy to store and access heavy dies, machinery, and tools. Capacity per shelf is 2,000 lbs.; capacity for the top of the unit is 500 lbs.

Uprights consist of 3″ wide steel channel and support braces. Shelves are 10-ga. steel, adjust every 2″, and extend on roller bearings. When fully extended, the shelves lock in place for safety. Easily retrieve items horizontally with a forklift truck and vertically (with shelves extended) with a hoist, crane, or monorail system. Units come with one set of cross braces for added support. Shelving is light gray and shipped unassembled.

Warning: Shelving must be securely anchored to the floor. Units have four 7/8″ dia. mounting holes (fasteners not included).

Light Duty Racks

Perfect when loading lighter items by hand. Racks are wider and deeper than our shelving units, offering more storage space per level for large items and boxes. No nuts or bolts are required for assembly—rivets on the ends of the beams simply insert into keyhole slots on the posts. Color is dark gray. Shipped unassembled.

Note: Racks and decking are sold separately.

Racks without decking and ***add-on racks without decking*** have three storage levels and consist of 14-ga. steel posts, and 14-ga. to 16-ga. steel horizontal beams. Also include 16-ga. center supports. Beams adjust on 1½″ centers. *Racks without decking* include four posts. *Add-on racks without decking* include two posts and connect to an existing rack.

Extra storage levels without decking come with components for one storage level, including beams and center supports.

Decking is sold separately and requires no fasteners for installation. *Particleboard decking* is ⅝″ thick. *Wire decking* is made of 3-ga. galvanized steel wire mesh with 3″×3″ openings.

Warning: Racks are not for use with pallets or power-lifting equipment such as forklift trucks. Do not exceed the capacity of the rack levels or the decking, whichever is rated lowest within your rack assembly.

Medium Duty Racks

When you need to store large items by hand, these racks provide more durability and greater load capacities than our light duty racks. Racks are wider and deeper than our shelving units and have more storage space per level. Color is dark gray. Shipped unassembled.

Note: Racks and decking are sold separately.

Racks without decking and ***add-on racks without decking*** have three storage levels and consist of 16-ga. steel uprights, 16-ga. steel horizontal beams, and 18-ga. steel center supports. Beams have bracket lugs that slide into keyhole slots on the uprights. They adjust on 1½″ centers. *Racks without decking* include two uprights. *Add-on racks without decking* include one upright and connect to an existing rack.

Extra storage levels without decking come with components for one storage level, including beams and center supports.

Steel decking is sold separately and requires no fasteners for installation. Decking is made of 20-ga. ribbed steel.

Warning: Racks are not for use with pallets or power-lifting equipment such as forklift trucks. Do not exceed the capacity of the rack levels or the decking, whichever is rated lowest within your rack assembly.

Heavy Duty Racks

Rack with Three Storage Levels and Steel Decking (Sold Separately)

Add-On Rack with Three Storage Levels and Steel Decking

Wire Decking

Steel Decking

Keyhole Slots

With capacities higher than our light and medium duty racks, these racks are ideal for large items like heavy machine parts and boxes. Color is tan. Shipped unassembled.

Note: Racks and decking are sold separately.

Racks without decking and ***add-on racks without decking*** consist of 13-ga. welded-steel uprights with 14-ga. steel horizontal beams and 16-ga. steel center supports. Beams have studs that lock into keyhole slots on the frames; they adjust on 4″ centers. Uprights have foot plates with one 5/8″ and two 3/4″ dia. holes for anchoring to the floor (fasteners not included). *Racks without decking* include two uprights. *Add-on racks without decking* include one upright and connect to an existing rack.

Extra storage levels without decking come with components for one storage level, including beams and center supports.

Decking is sold separately and requires no fasteners for installation. *Wire decking* is made of 4-ga. galvanized steel wire mesh with 2″×4″ openings and reinforced with steel channel for strength. *Steel decking* is made of ribbed 20-ga. galvanized steel.

Warning: Racks are not for use with pallets or power-lifting equipment such as forklift trucks. Do not exceed the capacity of the rack levels or the decking, whichever is rated lowest.

Light Duty Racks with Boxes

Rack with Three Storage Levels and 60 Boxes

Complete with decking and boxes for storage, these racks include everything you need to create a storage unit. Racks are easy to assemble—rivets on the ends of the beams insert into keyhole slots on the posts. Beams adjust on 1 1/2″ centers. Racks include center supports and 5/8″ thick particleboard decking. The posts, beams, and center supports are made of 14-ga. steel. Color is light gray. Shipped unassembled. The boxes are made of 200-lb. test white corrugated fiberboard and are sized to hold letter- or legal-size files; they include a lid, large label area, and hand holds. Boxes are shipped flat. *Warning:* Not for use with power lifting equipment, such as forklift trucks.

Rack and Conveyor Netting

Install this strong netting around your storage racks and conveyors to secure your inventory, increase safety, and help meet OSHA requirements. Netting is made of weather-treated nylon cord bound on all four sides with 5/16″ dia. rope. To achieve stated load rating, netting must be properly secured in 1-ft. increments with cable ties that are rated 175 lbs. or higher (not included, see page 1516). Color is black.

To Order: Please specify width: 8, 10, 12, 25, 50, or 100 ft.

Warning: Not for use as a personnel restraint.

Heavy Duty Pallet Racks

Unlike the racks shown on the previous pages, these racks are designed for use with power-lifting equipment. They're easy to assemble—simply insert beams into the keyhole slots on the uprights, and beams lock in place, preventing accidental disengagement. All are RMI (Rack Manufacturers Institute) and AISI (American Iron and Steel Institute) compliant. Shipped unassembled.

Uprights have welded horizontal and diagonal braces for maximum strength and rigidity. All are made of 13-ga. steel. Posts are 3″ Wd.×1⅝″ Dp. They have foot plates with two ⅝″ dia. holes for floor mounting (fasteners not included). Color is green.

Beams are made of 15-ga. steel with a 1⅝″ stepped recess for decking (not included, see 44705T and 4341T below). Color is orange.

Note: Do not exceed capacity of uprights or beams, whichever is rated lowest within your rack assembly.

Upright Capacity

Max. Beam Spacing	Cap. per pair, lbs.♣
36″	23,400
48″	19,300
60″	15,000
72″	11,700
84″	9,100
96″	7,100

♣Capacities are reduced by 7% when using beams that are 108″ and wider.

Complete Rack with Two Storage Levels

Racks

All racks include uprights and beams for the number of storage levels shown in the table. ***Complete racks*** come with two uprights. ***Add-on racks*** attach to an existing rack and include one upright. ***Extra storage levels*** consist of one pair of beams.

Create-Your-Own Racks

All components are sold separately so you can custom build a rack to meet your exact requirements. To begin, you'll need two uprights and at least two pairs of beams. Additional racks can be connected side-to-side by using a common upright.

Decking for Heavy Duty Pallet Racks

Give your pallets some added support. Each decking section has a load capacity of 2,500 lbs. (unless noted). Decking requires no fasteners for installation. It fits racks shown above, and other pallet racks with a 1⅝″ stepped recess in the beams.

Ordering Information: Measure the width of the beams in your pallet rack, then use the chart at right to determine the quantity and width of the decking sections you require. Other factors are rack depth and beam design.

Wire Decking— Made of 6-ga. steel wire mesh with 2″×4″ openings and reinforced with steel channel. **To Order:** Please specify finish: gray or galvanized.

Steel Decking— Made of 14-ga. steel and reinforced with steel channel. Decking has a gray finish.

Note: Do not exceed beam capacities.

★ Load cap. per section is 2,625 lbs. for decking with gray finish; 2,000 lbs. per section for decking with galvanized finish.

Wire Decking

Steel Decking

Extra-Heavy Duty Pallet Racks

With higher load capacities and thicker corners than our heavy duty racks, these resist side abuse caused by fork trucks. Beams slip into slots on the uprights and are locked into place with the included spring clips. Racks are RMI (Rack Manufacturers Institute) and AISC (American Institute of Steel Construction) compliant. Color is dark gray.

Uprights have welded horizontal and diagonal braces for added rigidity. They're made of 3″ wide steel channel and have foot plates with two 9/16″ dia. holes for floor anchoring (fasteners not included). ***Beams*** are made of structural steel channel and adjust on 2½″ centers.

Note: Do not exceed capacity of the frames or beams, whichever is rated lowest in your rack assembly.

Max. Beam Spacing	Upright Cap. per Pair, lbs.	Max. Beam Spacing	Upright Cap. per Pair, lbs.

♠ Requires one beam tie (sold separately) per pair of beams.

Accessories

Drop-In Pallet Supports

Slip over beams to prevent pallets from falling through. Two supports are recommended per pallet. Supports are 4″ wide. *Heavy duty supports* handle much greater capacities than flush supports and are raised 2″ above beam level.

For Rack Dp.	Flush Cap., lbs.	Flush	Each	Heavy Duty Cap., lbs.	Heavy Duty	Each
36″	1,500	5217T61	$30.90	3,200	5217T64	$33.06

Wire Decking for Extra-Heavy Duty Pallet Racks

Beam Wd.	Decking Sections Required per Rack Level
72″	Two 34″ Wide
96″	Two 46″ Wide
108″	Two 52″ Wide
120″	Two 34″ and One 46″ Wide
144″	Three 46″ Wide

Wire decking provides extra support for your pallets. Each section has a load capacity of 2,500 lbs. Decking requires no fasteners for installation and is made of 6-ga. steel wire mesh with 2″×4″ openings. It fits the racks shown above and other pallet racks with box- and channel-shaped beams. **To Order:** Please specify finish: gray or galvanized steel.

Note: Do not exceed beam capacities.

Ordering Information: Measure the width of the beams in your pallet rack and use the chart to determine the number and width of the decking sections you require. Also consider rack depth and beam design.

Quick-Mount Rack Netting

Easily secure this netting to any rack post that has keyhole slots using the included zinc-plated steel hardware. Netting is made of 0.070″ dia. gray nylon cord with a 2″×2″ mesh size and is bound on all sides with 1½″ wide nylon webbing. Tension straps (included) allow the netting width to adapt by ±1 ft, which means the 4 ft. wide netting can be used on 3 ft. to 5 ft. wide racks; the 8 ft. wide netting can be used on 7 ft. to 9 ft. wide racks. It meets OSHA requirements and conforms to NFPA (National Fire Protection Association) standards.

Warning: Not for use as a personnel restraint.

Wd.×Ht.	Load Cap., lbs.		Each
4 ft.×4 ft.	2,500	4563T11	$96.67
8 ft.×4 ft.	2,500	4563T12	104.18
8 ft.×8 ft.	2,500	4563T13	121.33

Rack Upright Post Protectors

Protect your storage racks from damage caused by vehicles. Protectors fit all 3″ wide posts. Color is yellow.

Steel floor-mount protectors bolt to the floor with four ½″ anchors (not included). Made of ¼″ thick steel plate. ***Plastic column-mount*** protector secures to post with two hook and loop straps. It's UV resistant and won't dent like steel.

Plastic and Steel Pallets

Compared to wood pallets, these are more durable, offer better moisture resistance, and are easier to clean. Plus, there's no need to worry about nails or splinters and they are recyclable. You can use them inside and outside your facility to store, move, and ship material.

Pallets for Racks with Decking— When stored in racks, these pallets require a supporting surface such as decking. See pages 1639-1640 for pallet racks and decking.

Pallets for Racks without Decking— Also known as rackable pallets, these pallets can be stored directly on the beams of a pallet rack and do not require a supporting surface such as decking. They have the highest load capacities of any pallets we offer.

Nestable pallets fit inside like-size pallets to save storage and shipping space.

Stackable pallets can be stacked one on top of another. They offer greater load capacities than nesting pallets.

Pallets with flow-through surface are lighter in weight and allow air and liquid to flow through the pallet.

Pallets with solid surface allow more uniform stacking.

Horizontal and Vertical Storage Racks

Horizontal Storage Rack

Vertical Storage Rack (Single-Sided)

Save space by storing your bar stock horizontally or vertically—these racks hold a variety of materials including pipe, tubing, and angle iron. Racks are made of 1/8″ thick steel and have fixed arms. Shipped unassembled.

Horizontal storage rack can hold materials up to 10 ft. long. Additional racks can be positioned side-by-side to accommodate materials longer than 10 feet. Color is dark gray.

Vertical storage racks can hold materials up to 12-ft. long and include shelves for storing smaller items. *Single-sided rack* has three shelves (one is 12-ga. steel; two are 14-ga. steel). Color is dark gray. *Double-sided rack* has four 12-ga. steel shelves. Color is green, except shelves are orange.

Create-Your-Own Mobile Storage Racks

Single-Sided Rack

Shelf

Shelf with Raised Sides

Customize these versatile mobile racks to meet your needs. Use them for typical shelving applications as well as for storing specialty items such as pipe, tubing, and spools. Just choose a rack from the offering below and add accessories. The components easily attach to the rack without fasteners. Color is orange.

Racks

Racks are made of 3/16″ thick steel. They include four casters (two rigid, two swivel) with 6″ dia. phenolic wheels. Welded and shipped assembled.

Holds Max. No. of Shelves	Overall Size, Wd.×Ht.×Dp.	Overall Cap., lbs.		Each
Single-Sided Racks				
7	34 5/8″×65 1/2″×24″	2,500	4651T13	$343.98
14	72 3/8″×65 1/2″×24″	2,500	4651T14	553.72

Light Duty Cantilever Racks

Double-Sided Rack

Perfect for storing lightweight materials such as plastics, conduit, and tubing. Racks have two 12-ga. steel channel columns with 7-ga. steel bases, plus 3/16″ thick structural steel arms that adjust on 1 1/2″ centers. The arms are angled upward 3° and have 2″ high removable lips to prevent material from rolling off. The bases have a lip on each side to provide additional storage space. Racks have two horizontal beams and a cross brace for added stability. Color is dark gray. Shipped unassembled.

Warning: Not for use with power-lifting equipment such as forklift trucks.

Light Duty Mobile Cantilever Rack

Roll this rack right up to your job site. It has two rigid and two swivel casters with 5″ dia. phenolic wheels. Rack is made of 12-ga. steel and has 12-ga. tubular steel arms welded onto the columns. There's one pair each of 12″, 14″, 16″, and 20″ long arms on each side of the rack. Arms have a 3″ high, welded-on lip that prevents material from rolling off. Color is dark gray. Shipped unassembled.

Optional floor lock prevents the rack from rolling while loading and unloading. It can be welded or bolted to the underside of the rack and has four 3/8″×3/4″ mounting slots (fasteners not included).

Warning: Not for use with power lifting equipment such as forklift trucks.

Overall Size, Wd.×Ht.×Dp.	No. of Arms	Cap. per Pair of Arms, lbs.	Overall Cap., lbs.		Each
50″×69″×43″	16	250	1,000	2870T11	$551.11

Optional Floor Lock ..... 2728T22 **Each** $38.47

Medium Duty Cantilever Racks

When you need something more rugged than our light duty racks, use these racks for storing materials such as conduit, lumber, and tubing. Racks are made of 6″ wide steel I-beam columns with a 5″ wide steel channel base, and 14-ga. steel arms that adjust on 1½″ centers. Arms have a 5° incline and a 2″ high lip to prevent material from rolling off. The lip is removable and can be reversed to make the end flush for storing flat material. All racks have two horizontal beams and come with cross braces for added stability. Color is dark gray, except arms have a galvanized finish. Shipped unassembled.

Complete racks include two columns. ***Add-on racks*** include one column and attach to a complete unit.

Warning: Not for use with power-lifting equipment such as forklift trucks.

Heavy Duty Cantilever Racks

Store pipe, lumber, and other heavy materials on these durable racks. Arms connect to the columns with pin-and-lock assemblies and adjust on 3″ centers. Color is dark gray. Shipped unassembled.

Columns— Made of 12-ga. steel. Each column includes a base with a lip on each side to provide additional storage space. Bases have four 11/16″ dia. holes for floor anchoring (fasteners not included).

Arms— All are made of 12-ga. steel, except the 36″ long arms are made of 14-ga. steel. Available with and without a removable 2″ high lip that prevents your material from falling off the rack. *Straight arms* extend parallel to the floor for storing flat material. *Inclined arms* are angled upward 18° to prevent round material from rolling off.

Braces— Braces are made of 2½″ × 1½″ steel tubing. For ***create-your-own racks***, the brace set you choose will determine the width of your rack.

Note: Do not exceed the capacity of the columns, which may be lower than the sum of the arm capacities.

Warning: Not for use with power-lifting equipment such as forklift trucks.

Racks

All the components required to create a rack are included—columns, straight arms with removable lips, and a set of braces. ***Complete racks*** include two columns. ***Add-on racks*** include one column and attach to a complete rack.

Extra-Heavy Duty Cantilever Racks

Single-Sided Complete Rack with Eight Arms

Single-Sided Add-On Rack with Four Arms

Designed for storing bar stock, pipe, and other extremely heavy material that is loaded and moved by forklifts or overhead cranes with slings. Arms connect to the columns with pin-and-lock assemblies and adjust on 3″ centers. Color is dark gray. Shipped unassembled.

Columns— Made of reinforced 10-ga. steel, except 96″ high columns are made of 11-ga. steel. Each column includes a base with a lip on each side for additional storage space. Base is 7-ga. steel with one 11/16″ dia. hole for floor anchoring (fasteners not included).

Arms— All are 4″ Wd. × 3″ Ht., tapering to 1½″ high and include pin and lock assemblies. Available with and without a removable 1¼″ high lip. 18″ and 24″ long arms are made of 11-ga. steel. 30″ to 48″ long arms are made of 10-ga. steel. *Straight arms* extend parallel to the floor for storing flat material. *Inclined arms* are angled upward 18° to prevent round material from rolling off.

Braces— Braces are made of 13-ga. steel. For ***create-your-own racks***, the brace set you choose will determine the width of your rack.

Note: Do not exceed the capacity of the columns, which may be lower than the sum of the arm capacities.

Racks

All the components required to create a rack are included—columns, straight arms with removable lips, and a set of braces. ***Complete racks*** include two columns. ***Add-on racks*** include one column and attach to a complete rack.

Wire Decking for Cantilever Racks with Straight Arms

Make your extra-heavy duty and heavy duty cantilever racks more versatile. Wire decking rests on the rack's arms, allowing you to store smaller material that would otherwise fall through.

Decking is made of 6-ga. steel wire mesh with 13-ga. steel reinforcing channels and 2″ × 4″ openings. Color is light gray. Load capacity is 3,000 lbs.

Note: Do not exceed arm capacity.

Create-Your-Own Sheet Storage Rack

Keep your sheet stock accessible by storing it vertically in this rack. Just order a base and the number of dividers you need. The base holds a maximum of 10 dividers. Dividers attach to the base without hardware and adjust on 3¾″ centers. *Note:* Do not exceed the capacity of the base, which may be less than the sum of the divider capacities.

Base has two-way fork entry and can be moved with a forklift when empty. It's made of 16-ga. steel and has four 9/16″ dia. holes for floor mounting (fasteners are not included). Color is dark gray.

Divider is made of 7-ga., 1½″ square steel tubing. Color is dark gray.

Base with Three Dividers

Cap., lbs.	Wd.×Ht.×Dp.		Each
Base			
1,500	72″ × 7″ × 39¾″	4883T2	$560.95
Divider			
300	69″ × 36″ × 1½″	4883T24	119.64

Cylinder Holders

Keep your cylinders upright and secure. All holders meet OSHA requirements. Steel holders are made of 11-ga. steel, unless noted. ***Caution:*** Chains and straps do not support cylinder weight. Cylinders should rest on the floor or in the base of the holder.

A&B ***Table-Top Holders—****Style A* have mounting holes for securing to a table top (fasteners not included) and are furnished with set screws to secure your cylinder. *Style B* has tabs on the inside that grip the cylinder.

C&D ***Bench-Mount Holders—***Clamp to a bench top without fasteners. *Style C* clamp to any bench top up to 2½″ thick. *Style D* clamp to any bench top from ¾″ to 3½″ thick.

E-H ***Wall-Mount Holders—***Attach to any wall; fasteners are not included. The base of *style H* must rest on the floor in addition to being secured to the wall.

J&K ***Floor-Mount Holders—***Secure to the floor for added security. Mounting fasteners are not included.

L&M ***Holders with Forklift Entry—***Have two-way forklift access, so they can be easily moved around the plant. *Style L* have 6¼″ Wd.×3 15/16″ Ht. forklift channels, and bars that enclose cylinders to keep them upright. *Style M* has 5⅞″ Wd.×3″ Ht. forklift channels. Holder must be empty when moving with a forklift. It can be mounted to the floor for added security (fasteners not included).

Drum Platforms

3055T1

3055T2

Store 15- to 55-gallon drums (not included) on shelving, pallets, and pallet racks using these low-profile platforms. Platforms have a slight incline to tilt drums forward for improved drainage. Made of recycled polyethylene. Color is black. 3055T2 has 5¾″ Wd.×3″ Ht. channels for forklift access from the front and back.

Drums per Platform	Overall Size, Wd.×Ht.×Dp.	Cap., lbs.		Each
1	15″×2″ × 6″	550	3055T1	$15.41
1	18″×5½″×36″	550	3055T2	92.20

Stackable Drum Racks

Two-Drum Rack

Stacked Two High

Increase storage space for your 55-gallon drums (not included) without using valuable floor space—these racks can be stacked up to four high. Constructed of 14-ga. steel with a 1″×3″ tubing frame. Racks can be moved with a forklift. Color is orange. Shipped assembled.

Two-Drum Rack—Has forklift access from all sides.

Three-Drum Rack—Has forklift access from the front and back. *Note:* Do not move these racks if stacked more than two high.

Holds No. of Drums	Overall Size, Wd.×Ht.×Dp.	Cap., lbs.		Each
2	45½″×12½″×30″	1,600	2326T11	$121.07

Stackable Spill-Control Racks for Pails, Cans, and Drums

Racks for 30 Gallon and 55 Gallon Drum Storage

These racks provide convenient storage and also contain leaks and spills. Made of rustproof polyethylene. Base racks meet EPA 40 CFR 264.175. Color is yellow. Shipped assembled.

Base rack for 5- and 6½-gallon pails and cans has an 8-gallon containment sump.

Base rack for 30- and 55-gallon drums has a 100-gallon containment sump plus a deep well that holds two 5-gallon pails for easy dispensing. It also has 16¹¹⁄₁₆″ Wd.×2″ Ht. channels for forklift access from the back.

Add-On Racks—Stack up to two additional levels on the base racks. ***Add-on rack for 30- and 55-gallon drums*** has 6″ Wd.×2⅜″ Ht. channels for front and back forklift access. ***Optional shelf*** is for use with the add-on rack for 30- and 55-gallon drums and allows for easy dispensing.

Stackable Storage Racks

Six Racks (Stacked Three High)

Rack with Optional Divider

Stack these racks up to six levels high to create storage space for heavy bar stock, pipe, and lumber. They're extremely rugged, yet light enough to be set up by one person—no tools or fasteners required.

Racks have a welded 14- to 11-ga. steel construction with 2″ square steel posts.

Color is dark gray. Shipped assembled.

Optional dividers (sold separately) divide the vertical space into two openings. Made of 11- to 7-ga. steel, they simply drop into place.

Pallet-Style Stackable Racks

You can stack these versatile racks for optimal storage, then disassemble them when they're not in use. 36″ high racks can be stacked up to five high, and 48″ high racks can be stacked up to four high. All have a steel base and forklift access on four sides. A socket in each corner of the rack base accepts a removable post. The top of each post has a 4¼″ square surface for stacking. Color is dark gray. Shipped unassembled.

2,000-lb. capacity racks have 1½″ sq., 13-ga. steel posts. *4,000-lb. capacity racks* have 2³⁄₁₆″ sq., 14-ga. steel posts. *Racks with decking* have 1″×6″ wood boards permanently affixed to the base.

Assembled Multiperson Steel Locker with Master Door

Individuals can access their locker compartment with their own key, while an authorized person can access all compartments at one time (via the master door) with a master key.

Locker has a 24-ga. steel body with ventilation holes in the back panel, 18-ga. steel doors, and a 16-ga. steel frame. The back panel has eight ¼″×³⁄₁₆″ slots for wall mounting (fasteners not included). Each compartment has a continuous-length hinge and a lock with two keys; each compartment is keyed differently. The master door has four hinges and three locking points for security; it comes furnished with one lock and key. Color is light gray.

Unassembled Steel Lockers with Recessed and Hasp Handles

A One Tier

B Two Tier

C Five Tier

D Six Tier

Recessed Handle

Hasp Handle

Slope Top

Front and End Bases

These traditional steel lockers are strong and durable, yet are more economical than other lockers we offer. All lockers accommodate a padlock (not included) with a maximum shackle diameter of 7/16″. You can also add a key lock (sold separately below) to all styles, or a combination lock (see 1504A11 on page 2953) to *Styles A* and *B*. All lockers have 6″ high legs. **To Order:** Please specify color: dark gray or tan.

(A&B) Lockers with Recessed Handle— All have a 24-ga. steel body, 16-ga. steel doors and door frames, zinc-plated steel recessed handles, and two sets of louvers (per door) for ventilation. The *12″* and *15″ deep models* have four interior coat hooks per opening. The *18″ deep models* have one interior garment rod per opening.

Style A have three hinges and locking points for security. They also have a fixed shelf 10″ from the top of the locker.

Style B have two hinges and locking points (per door) for security.

(C-F) Lockers with Hasp Handle— All have a 24-ga. steel body, 18-ga. steel doors, 16-ga. steel door frames, two hinges per door, and one set of louvers (per door) for ventilation.

Styles E and *F* have an exterior garment rod. *Note:* Overall height for *Style E* includes garment rod.

Slope Tops— Add a sloping top to the three-lockers wide models to discourage people from placing items on top of the lockers. Made of 24-ga. steel. **To Order:** Please specify color: dark gray or tan.

Also Available: Slope top for one-locker wide models. Please ask for 4916T81 and specify locker width and depth as well as color (dark gray or tan).

Front and End Bases— Provide your lockers with a more finished look. They also prevent dirt and debris from collecting underneath the lockers. All are made of 24-ga. steel. *Note:* For three-lockers wide models, you need to order three front bases. **To Order:** Please specify color: dark gray or tan.

Unassembled Steel Lockers with Pull-Up Handles

A *One Tier*

B *Two Tier*

C *Three Tier*

Pull-Up Handle

Slope Top

Front and End Bases

Just like our economical steel lockers on the previous page, except these have pull-up handles.

All lockers have a 24-ga. steel body, 16-ga. steel doors and door frames, chrome-plated die-cast zinc handles, and two sets of louvers (per door) for ventilation. They accommodate a padlock (not included) with a maximum shackle diameter of 5/16″. You can also add a key lock (sold separately below) or a combination lock (see 1504A11 on page 2953). All lockers have 6″ high legs. **To Order:** Please specify color: beige or light gray.

(A) One-Tier Lockers— Have three hinges and locking points for security. They also have a fixed shelf 9″ from the top of the locker. The *12″* and *15″ deep models* have four interior coat hooks. The *18″* and *21″ deep models* have three interior coat hooks and a garment rod.

(B&C) Two-Tier and Three-Tier Lockers— Have two hinges and locking points (per door) for security. They also have four interior coat hooks per opening.

Slope Tops— Add a sloping top to the three-lockers wide models to prevent people from leaving items on top of the lockers. Made of 20-ga. steel. **To Order:** Please specify color: beige or light gray.

Also Available: Slope top for one-locker wide models. Please ask for 4862T971 and specify locker width and depth as well as color (beige or light gray).

Front and End Bases— Provide your lockers with a more finished look. They also prevent dirt and debris from collecting underneath the lockers. All are made of 20-ga. steel. Note: For three-lockers wide models, you need to order three front bases. **To Order:** Please specify color: beige or light gray.

Modular Assembled Plastic Lockers

Hasp Handle

Flat Top with 9½″ High Opening

Slope Top with 9½″ High Opening

Flat Top with 33″ High Opening

Slope Top with 33″ High Opening

Mix and match different sizes and styles of our plastic lockers to create a customized locker system. You can drill holes for rivets (not included) to connect lockers together as high and as wide as you need. Made of ¼″ thick polyethylene with nylon hinge pins, these lockers are not only quieter than metal lockers, but they're also rust-, dent-, and virtually scratchproof. Simply wash with soap and water to clean (each has two bottom drain holes). Lockers have a hasp handle that accommodates a padlock (not included) with a maximum shackle dia. of 9/32″. Color is light gray.

Lockers with a ***9½″ high opening*** have two hinges and one set of louvers for ventilation. Lockers with a ***33″ high opening*** have three hinges, three sets of louvers for ventilation, and one aluminum coat hook.

Slope-Top Lockers— Can be used alone or placed on top of flat-top lockers. Their design prevents people from leaving items on top of lockers. The interior sloped portion of each locker is hollow for added storage space.

Opening Size, Wd.×Ht.×Dp.	Overall Size, Wd.×Dp.	Flat-Top Lockers Ht.		Each	Slope-Top Lockers Ht.		Each

Contemporary-Style Unassembled Steel Lockers

With their streamlined design, these lockers are great for offices and corridors.

Lockers have a 24-ga. steel body, 16-ga. steel frame, polystyrene recessed pull handles, and two sets of hidden louvers (per door) for ventilation. Doors have a double-wall construction (outer panel is 20-ga. steel; inner panel is 22-ga. steel) to make opening and closing them quieter than standard lockers. All accommodate a padlock (not included) with a maximum shackle diameter of 7/16″. You can also add a key lock (sold separately below). **To Order:** For complete lockers and add-on lockers, please specify color: dark gray or tan.

(A) One-Tier Locker— Has three hinges, two interior coat hooks, and an interior garment rod. It also has a fixed shelf 14″ from the top of the locker.

(B) Two-Tier Locker— Has two hinges and two interior coat hooks per opening.

(C) Six-Tier Locker— Has two hinges per opening.

(D&E) Four- and Sixteen-Person Lockers— Have two hinges per door as well as an exterior garment rod. Overall height for *style D* includes garment rod.

Add-On Lockers— Mount these units (furnished without one side panel) to either side of a complete locker to make up a row of lockers. We recommend that every fifth locker should be a complete locker (not an add on) to maintain stability. Mounting fasteners included.

Hercules Assembled All-Welded Steel Lockers

Here are the most durable lockers we offer. They come assembled and ready to use. All have a 12-ga. steel body and door; 6″ high, 7-ga. steel legs; and lever handles. Each leg has a ¾″ hole for mounting lockers to the floor (fasteners not included). Lockers accommodate a padlock (not included) with a maximum shackle diameter of ½″. Color is dark gray.

(F) One-Tier Lockers— Have three hinges and locking points for security, two sets of louvers for ventilation, one interior coat hook, an interior garment rod, and a shelf fixed 12″ from the top of the locker.

(G) Three-Tier Lockers— Have two hinges and one locking point (per door) for security.

Heavy Duty Assembled Plastic Lockers

Unlike most of their steel counterparts, these high-density polyethylene lockers won't rust, corrode, or dent. They're also quieter, resistant to scratches, and easy to maintain.

All lockers have a one-piece, ⅜″ thick, thermally welded body. The doors and door frames are ½″ thick with a continuous stainless steel hinge and polyethylene latch that runs the length of the door. Lockers also have two sets of louvers (per door) for ventilation and a pull-up handle with a concealed stainless steel hasp. They accommodate a padlock (not included) with a maximum shackle diameter of 9/32″. *Note:* Lockers come with white sides. Order end panels (sold separately) to give the exposed sides of your lockers a finished look. End panels are made of ⅜″ thick polyethylene.

To Order: For lockers and end panels, please specify color: beige or light gray.

(H) One-Tier Lockers— Have an interior two-prong coat hook as well as a fixed shelf 12″ from the top of the locker.

(J) Two-Tier Lockers— Each opening has an interior two-prong coat hook.

Slope Top

Front and End Bases

Perfect if you don't have the time or personnel to assemble lockers, these lockers come ready to use. All accommodate a padlock (not included) with a maximum shackle diameter of 5/16″. You can also add a key lock (sold separately below) to all styles, or a combination lock (see 1504A21 on page 2953) to *Styles A* and *B*. All have 6″ high legs.

To Order: Please specify color: light gray or tan.

Standard Lockers— All have a 24-ga. steel body and 16-ga. steel doors and door frames, unless noted. Louvers (two sets per door on *Styles A* and *B*; one set per door on *Styles C, D,* and *E*) provide ventilation.

Vented/Security Lockers— Diamond-shaped ventilation slots not only offer maximum air flow to prevent unwanted odors, but they also allow visibility of stored contents. All have a 16-ga. steel body and 14-ga. steel doors and door frames.

Style A have three hinges and locking points for security, three interior coat hooks, and a shelf fixed 8½″ from the top. The *18″, 21″,* and *24″ deep standard lockers* as well as the *one-tier vented/security lockers* also have an interior garment rod.

Style B have two hinges and locking points plus three interior coat hooks per opening.

Styles C, D, and ***E*** have two hinges. *Style E* has 18-ga. steel doors and an exterior garment rod (the rod is included in the overall height).

Slope Tops— Add a sloping top to the three-lockers wide models (except where noted) to prevent people from leaving items on top of the lockers. Made of 20-ga. steel. **To Order:** Please specify color: light gray or tan.

Front and End Bases— Provide your lockers with a more finished look. They also prevent dirt and debris from collecting underneath the lockers. All are made of 20-ga. steel. *Note:* For three-lockers wide models, you need to order three front bases. **To Order:** Please specify color: light gray or tan.

26- 50	3/4″×2 7/16″	5162T87	19.85
51- 75	3/4″×2 7/16″	5162T28	19.85

Also Available: Other numbers. Please ask for 5162T78 and specify number(s).

Key Lock

This lock can be installed through a knockout hole in the locker door, and is furnished with two keys. Each individual lock opens with a different key.

		Each
Key Lock	4597T96	$7.95

Create-Your-Own Roller-Curtain Partitions

Roll these flexible curtains into place when you need them, and out of the way when you're through. Made of vinyl, all curtains resist fire, water, oil, mildew, and most acids. They provide privacy, keep areas clean, and are CFM (California Fire Marshal) approved.

Each partition section is furnished with a vinyl curtain, a 16-ga. galvanized steel hanging track, and 10-ga. steel assembly hardware consisting of track connectors and two-wheel rollers with 1″ swivel hooks for hanging curtains. Install the hanging track by suspending it from overhead supports with chain or threaded rod (not included). The top hem of each curtain has grommets for hanging, while the bottom hem is weighted for stability. Hook-and-loop fasteners along the vertical edges of the curtains allow easy access to your enclosed space, yet assure a tight seal when the curtains are closed.

Clear-view curtains have a 16-mil thick, 52″ high clear center section (30″ up from the bottom) that allows you to see in as well as out. The top of the curtain is white, and the bottom is yellow. Both top and bottom are 14 mils thick.

Translucent curtains are 22 mils thick and allow light to pass through. They're great for separating warm and cool-air areas, and for use as a dust barrier. Color is off-white.

Privacy curtains are 14 mils thick and can't be seen through. Use them for in-plant offices, locker rooms, and other restricted areas. Color is yellow.

To Order: Please specify clear view, translucent, or privacy curtain.

To Order a Partition— Determine the overall length, width, and height of your partition as well as the number of sides. Then, determine how many straight and curved sections you'll need. Remember that a curved section measures 2 ft. on each side of the curve.

Clear-View Curtain

Height	STRAIGHT SECTIONS 6-ft. Wide	Each	8-ft. Wide	Each	10-ft. Wide	Each	4-ft. CURVED SECTIONS (2-ft. Each Side of Curve)	Each

In-Plant Office Buildings

Easy to assemble and relocate when necessary, these office buildings are just what you need to create private work space in your warehouse or manufacturing facility.

Each building has 3″ thick, fire-rated, R-11 insulated wall panels; 24-ga. steel floor track with screw-on vinyl base; 20-ga. steel posts with wiring access on each side; aluminum top caps and corner posts; 22-ga. corrugated steel roof; and a 24″×48″ noncombustible lay-in acoustical ceiling system. You'll also get a 36″ Wd.×84″ Ht.×1¾″ Thick. door that's made of 20-ga. steel and hung on a 20-ga. steel frame. The door has a 24″ Wd.×24″ Ht.×¼″ Thick. tempered glass window and comes furnished with a keyed lock and two keys (keyed differently). All doors swing out and are hinged on the left. Buildings include up to three (see below) factory-installed tempered glass windows that measure 48″ Wd.×36″ Ht.×¼″ Thick., which can be installed in any wall panel location. They also come with an electrical package that includes 24″×48″ recessed fluorescent light fixtures with acrylic lens cover (four 48″ long T8 bulbs required and not included; see page 697), 110 VAC outlet, wall switch, outlet boxes, conduit (wiring not included), and a circuit breaker panel (with breakers) that's rated at 100 amps with a 70-amp main. Buildings come with four walls but do not come with a floor. Color is beige.

Optional Air Conditioner Cut-Out Kit— Contains one 12-ft. length of 3″ thick wall channel that you cut for an air conditioner opening.

Also Available: Office buildings in different sizes or with additional factory-installed glass windows. Please ask for 6704T777 and specify overall size of building, number of sides, and submit a drawing with the number and location of the additional windows, outlets, and light fixtures.

Clean Rooms

Create a contaminant-free environment for your critical work with these soft-wall clean rooms. All are rated Class 100,000 clean rooms because they come furnished with one motorized HEPA filter that is 99.99% efficient for particles as small as 0.3 microns—great for pharmaceutical, food, medical, semiconductor, and aerospace applications. The filter operates on 120 VAC, 60 Hz, 2.8 amps and is UL listed. To create a Class 10,000, Class 1,000, or Class 100 clean room, simply remove the ceiling panel(s) and add additional motorized HEPA filter modules (sold separately). *Note:* Use the chart to determine how many filters you will need to reach your desired rating.

Each clean room has an 11-ga. tubular steel, white frame; four clear vinyl walls that are 40-mil thick and overlap each other by 6″ for easy entry and exit; and two 120 VAC recessed light fixtures with four F32T8 fluorescent light bulbs (included). *Note:* There's a 6″ clearance between the bottom of the vinyl walls and the floor.

Optional strip door makes it easier for people with carts to enter and exit the clean room. Door has 80-mil thick clear vinyl strips and measures 48″ Wd.×90″ Ht.

Wire Partitions

A ***Standard Wall Panel***
Wire mesh is framed with 1¼″ × ⅝″ vertical channels and 1″ × ½″ horizontal channels. Includes a center-reinforcing bar of two 1″ × ⅜″ channels.

B ***Wall Panel with Slide-Up Service Window***
Window is 22½″ Wd. × 18½″ Ht. and includes a 22¼″ Wd. × 12″ Dp. shelf.

D ***Sliding Door Panel***
Furnished with overhead track, two trolleys, and bottom door guide. Actual door opening is 3″ shorter than the listed door height. Choose from doors that slide open to the right and doors that slide open to the left.

Wire Mesh
Constructed of 10-ga. wire, woven into 1½″ diamonds.

G ***Right-Angle Corner Post***
Made of 1¼″ sq., 14-ga. steel with a ½″ mounting hole.

J ***Line Post***

E ***Hinged Door Panel***
Actual door opening height is ½″ shorter than the listed door height. Doors swing out 90°. Choose from doors that swing out to the right and doors that swing out to the left.

Cylinder Lock
Included with all doors. Furnished with two keys. Keyed differently.

L ***Cast Aluminum Floor Shoe***
Included with wall and door panels (except Hinged Dual-Door Panels). Vertical channels of two connecting panels fit into floor shoe. Shoe is 3¹¹⁄₁₆″ Lg. × 1¾″ Wd. × 2″ Ht. with two ⅜″ mounting holes.

C ***Adjustable Filler Panel***
Includes an expanded metal panel with a 1½″ diamond pattern and two vertical channels for framing. Panel can be cut down from 13″ to 2½″ wide. Floor shoes aren't needed.

F ***Hinged Dual-Door Panel***
Actual door opening height is ½″ shorter than the listed door height. Choose from doors that swing out 90° and doors that swing in 90°.

H ***Adjustable Corner Post***
Post is made of 14-ga. steel and has two ⅜″ mounting holes.

J ***Line Post***
Made of 1″ × 3½″, 12-ga. steel with a 5″ × 9″ baseplate that has four ⁷⁄₁₆″ mounting holes.

K ***Wall Mounting Kit***
Has one ⅜″ mounting hole for securing a partition to a wall (fasteners included).

This diamond-patterned traditional favorite is great for creating tool and stock rooms, and safely protecting equipment and valuables. Use components such as wall panels, door panels, and accessories to create a custom partition. Panels are made of 10-ga. wire that's woven into framing for strength, except for adjustable filler panels, which are made of expanded metal. All components include fasteners for assembly; however, fasteners for floor shoes are not included. Color is dark gray. Note: There's a 3″ clearance between the bottom of wall and door panels and the floor.

To Order a Partition— Please feel free to contact us or email us your drawing if you need help determining what components you'll need.

1. Make a rough drawing of your partition, including overall width, depth, and height (7-, 8-, 10-, or 12-ft. high).
2. Determine the width and number of wall panels you'll need (***A*** and ***B***). For in-between widths, you may require adjustable filler panels (***C***).
3. Indicate location, size, and style of door panel(s) (***D, E,*** and ***F***).
4. Order a right-angle corner post (***G***) for each 90° corner. For corners other than 90° (up to 270°), order an adjustable corner post (***H***).
5. Order a line post (***J***) for every 15 to 20 feet for added stability.
6. If your partition will make use of an existing wall, order one wall mounting kit (***K***) for each panel you'll connect to a wall.

Complete Wire Partitions

Similar to the partitions shown on the previous page, without the guesswork. These complete partitions include everything you'll need: wall and door panels with floor shoes, right-angle corner posts, a line post (when necessary), and wall mounting kits (when necessary; fasteners included). Panels are constructed of 10-ga. wire woven into a 1½″ diamond pattern.

Partitions are offered with and without a roof. Use two-sided partitions to create a room in a corner, three-sided partitions to create a room along a wall, and four-sided partitions to create a freestanding room. The 8-ft. and 12-ft. wide partitions have a 4-ft. wide hinged door that swings out (to the left) 90°; actual door opening height is ½″ shorter than the listed height. The 10-, 20-, and 30-ft. wide partitions have a 5-ft. wide sliding door that slides open to the left; actual door opening height is 3″ shorter than the listed height. All doors include a cylinder lock that comes furnished with two keys (keyed differently). Color is gray. Shipped unassembled.

★ Three-sided partitions include two sides that are the listed length and one side that is the listed width.

Easy-to-Assemble Wire Partitions

B ***Hinged Door Panel***
Actual door opening height is 94″. Doors swing out and to the left 90°.

C ***Hinged Dual-Door Panels***
Actual opening height is 94″. Choose from doors that swing in 90° and doors that swing out 90°.

A ***Wall Panels***
Stack to form 8-, 10-, or 12-ft. partitions.

J ***Optional Top Cap Railing***
Gives panels a more finished look. Made of 1¼″ × 2⅛″, 14-ga. steel. It can be cut with a hacksaw or cutoff saw.

Cylinder Lock
Included with all doors. Furnished with two keys. Keyed differently.

Welded Wire
8-ga. galvanized steel with a 1½″ × 3″ rectangular pattern.

E ***Posts***
2″ square, 14-ga. steel, welded to a 6″ × 2″ × ¼″ baseplate, which has two ⅝″ mounting holes.

D ***Sliding Door Panel***
Door slides open to the left.

F ***Post Extension***

E ***Post***

H ***Optional Transom Kit***
For 10- and 12-ft. high partitions.

Stack wall panels as shown to form 8-, 10-, or 12-ft. high partitions.

These welded-wire partitions require significantly less nut-and-bolt assembly and can be easily cut to accommodate obstructions like pipes without unraveling, unlike our other wire partitions. Panels are made of 8-ga. galvanized steel. Assembly hardware is included.

Stack ***wall panels*** (***A***) horizontally to form 8-, 10-, or 12-ft. high partitions. All have a modular design, which makes them easier to assemble and relocate than woven-wire models. There are 1″ bends around the top and bottom of each wall panel for extra rigidity. Bolt wall panels together horizontally at the bends and then vertically to the posts (***E***) sold separately.

Door panels (***B, C,*** and ***D***) come with your choice of hinged and sliding doors. Sliding doors come with a door track that mounts to posts (***E***) sold separately.

Note: There's a 2″ clearance between the bottom of the wall and door panels and the floor.

To Order a Partition— Please feel free to contact us or email us your drawing if you need help determining what components you'll need.

1. Make a rough drawing of your partition, including overall width, depth, and height.

2. Indicate location, size, and style of door panel(s) (***B, C,*** and ***D***). If you want to fill the space above the doors on 10- and 12-ft. high partitions, order one transom kit (***H***) per door. Transoms can be cut to match your door width.

3. Determine the number of wall panels (***A***) you will need. Note: Wall panels should be stacked to reach desired partition height. You can cut them if they need to be less than 4- or 8-ft. wide between posts.

4. Use posts (***E***) between each wall panel, on both sides of doors, and at corners. Order extensions (***F***) to make 10- or 12-ft. high posts.

5. If your partition will make use of an existing wall, order one wall mounting kit (***G***) for each panel you'll connect to a wall.

Plastic Outdoor Storage Buildings

A

B

C

In addition to resisting weather, rust, rot, and dents, these polypropylene units are also easy to assemble—simply snap them together, no tools required. Unlike steel buildings, these never need to be painted, so maintenance is a breeze.

Each unit has 2½″ thick walls, a floor, and a ramp for easy access. They also have hinged, swing-open doors that accept a padlock (not included; maximum shackle diameter is 5/16″). Color is beige.

All units include a molded-in support for a wood shelf and a template that allows you to create the shelf from your own lumber (one wood shelf for Style A; up to three wood shelves for Styles B and C).

Optional wire shelf for Styles A and B slides into mounting holes in the back of each unit (up to three wire shelves can be used). Load capacity is 100 lbs.

Style A also includes a lift-up top with a rod to prop it open. The top can be locked with the doors, using the same padlock (not included).

Galvanized Steel Outdoor Storage Buildings

D

E

F

Designed for rust and weather resistance, these buildings solve your outdoor storage needs. All are 34-ga. galvanized steel with 28-ga. galvanized steel framing components. They do not include a floor. Shipped unassembled.

Style D have hinged, swing-open doors that can be installed at either 49″ wide end. Doors accept a padlock (not included) with a maximum shackle diameter of 3/8″.

Style E have horizontal sliding doors that accept a padlock (not included) with a maximum shackle diameter of 3/8″. They also have brown trim and come furnished with a wall brace for added strength.

Style F has an overhead, vertical sliding door that comes with a cylinder lock and two keys (keyed alike). It also has brown trim and includes a heavy duty truss system and wall brace for added strength. A horizontal sliding side door allows additional access to the building.

Foundation Kits— These galvanized steel framing kits provide a perfect base for storage buildings. Kits accept plywood flooring (not included).

Auger and Concrete Anchor Kits— Contain everything you need to anchor your buildings. *Auger kit* includes four 30″ steel augers, 60 ft. of steel cable, and four cable clamps. *Concrete anchor kit* includes four steel corner gussets that fit into the floor frame and perimeter clips that fit over the frame. Also furnished with a ¼″ masonry drill bit and bolts for attaching your building directly to a concrete slab.

Note: You need two auger or concrete kits with Style F building.

Shelving Kit— Includes a 29½″ high wall-mount shelving unit with three 30″ Wd.×12″ Dp. shelves. Each shelf has a load capacity of 85 lbs. Made of galvanized steel. Color is gray.

Outdoor Personnel Buildings

Standard Building

The perfect choice for guardhouses, parking-lot attendant booths, booths for security stops, and more. All buildings come fully assembled and completely wired for connecting to a power source. They're made of 13/16″ thick fiberboard with a corrosion-resistant, anodized aluminum coating and have an insulation rating of R1. The roof has a rubber layer for extra weather resistance as well as gutters that overhang the building by 3″ on the two sides with doors. The floor is also made of aluminum and has a slip-resistant diamond-tread pattern.

All buildings have two sliding doors with a lock and two keys (keyed alike) per door. All windows are 1/8″ thick tempered glass and are 34″ above the floor. Windows in nondoor panels slide open and are 42″ Wd.•45″ Ht.

Each building includes a surface-mounted, fluorescent light fixture with acrylic cover/diffuser that requires two 24″ long, 17-watt, T8 bulbs (not included; see page 697); one 120-volt duplex outlet; one 230-volt outlet; and a 100-amp, 1-phase service box. Buildings also have a laminated particleboard shelf with oak woodgrain finish placed 32″ above the floor. Shelf is 42″ Wd.•21″ Dp.•1″ Thick. Two forklift channels on one side of the building (9″ Wd.•2¾″ Ht. on 32″ centers) allow you to easily transport buildings to where they are needed.

Buildings with Heater— Have a 230-volt, 4,000-watt, wall-mount heater with 13,648 Btu output.

Buildings with Heater and Air Conditioner (HVAC)— Have a 230-volt, 3,670/1,075-watt (heating/cooling), wall-mount unit with 11,600/9,900 Btu (heating/cooling) output.

Workbenches and Accessories

Standard Fixed-Height Workbench

Standard Adjustable-Height Workbench with Accessories

Heavy Duty Adjustable-Height Workbench with Accessories

You select the workbench, and we'll supply the steel legs and steel stringer—then you add all the accessories you want. All legs have a foot plate with two 3/8″ dia. mounting holes for floor mounting (fasteners not included) and knockouts in the front and back to accept duplex electrical outlets. Shipped unassembled.

Workbenches

Standard Fixed-Height Workbenches—Made of 14- to 13-ga. steel with flared legs. Metal parts are dark gray.

Standard Adjustable-Height Workbenches—Made of 14- to 13-ga. steel and have legs that adjust in 1½″ increments (leg bolts are removed using a boltless rivet and keyhole assembly). Metal parts are dark gray.

Heavy Duty Adjustable-Height Workbenches—Made of 18- to 14-ga. steel with 14-ga. steel legs. Legs slide up and down in a slotted channel so they are infinitely adjustable and easy to change—simply loosen a bolt and slide leg into desired position. Metal parts are light gray.

Steel Tops—Made of 12-ga. steel. Color is dark gray.

Hardboard-Over-Steel Tops—Hardboard is bonded to 12-ga. steel and is splinter-, warp-, and moisture resistant.

Particleboard Tops—Nonconductive as well as impact and chemical resistant, all have an MDF (medium density fiberboard) core with particleboard on the top and bottom.

Maple Tops—Nonconductive and impact resistant, all have a mineral-oil finish. NSF certified.

Plastic-Laminate Tops—Nonconductive as well as stain and chemical resistant, all have a plastic-laminate surface that's bonded to a particleboard core. Color is light gray.

Static-Dissipative Plastic-Laminate Tops—All have a static-dissipative plastic-laminate surface that's bonded to a particleboard core. Surface resistivity is 106 to 109 ohms/sq. Come with grounding snaps. Color is almond.

Workbench Accessories

All accessories are 20- to 14-ga. steel.

Drawers—Accommodate a padlock (padlock not included; maximum shackle dia. is 3/8″). Drawer size *for standard workbenches* is 15″ Wd.×18″ Dp.×8¼″ Ht. Size *for heavy duty workbenches* is 15¾″ Wd.×20″ Dp.×6¾″ Ht.

Backstop and Side Stops—Extend 3″ above the workbench.

Lower Shelves—Each shelf is 14″ deep *for standard workbenches* and 13¼″ deep *for heavy duty workbenches*.

Upper Shelves—Have a 1½″ backstop (unless noted) and are 12″ Ht.×10½″ Dp.

Upper Shelves with Outlets for Standard Workbenches—Have a circuit breaker, lighted switch, 8-ft. power cord with three-prong plug, and four duplex outlets. They are 18″ Ht.×15″ Dp.

Outlet Strips for Heavy Duty Workbenches—All are 1½″ high and are rated 15 amps at 125 VAC. There are five outlets on the 60″ wide models and eight outlets on the 72″ wide models. Require hardwiring.

Contemporary-Style Workbenches and Accessories

Workbench with Add-On Unit and Accessories

You'll never run out of space with these workbenches—they are infinitely expandable so you can attach as many add-on units as you need. They are adjustable from 21″ to 72″ high, allowing you to mount your top and accessories anywhere along the range. The cantilever-style recessed uprights provide ample leg room. Shipped unassembled.

Workbenches

Workbenches and add-on units have 20- to 16-ga. steel uprights that are 2″ Wd. × 12″ Dp. × 72″ Ht. with channels for mounting tops and accessories. The uprights are light gray with blue trim. Tops are 1¼″ thick plastic laminate. Color is light gray. The static-dissipative top has a surface resistivity of 10^6 to 10^9 ohms/sq.

Workbenches consist of two uprights and a top.

Add-on units consist of one upright and a top.

Top	Wd. × Dp. × Ht.	Cap., lbs.	*Workbenches*	Each	*Add-On Units*	Each
Standard	60″ × 30″ × 72″	500	47495T22	$961.00	47495T41	$642.00
Static Dissipative	60″ × 30″ × 72″	500	47495T46	1,106.94	47495T47	799.40

Accessories

All accessories are 20- to 14-ga. steel, unless otherwise indicated.

(A) Computer monitor holder rotates 360° on a swing arm and has a 1¼″ thick particleboard top.

(B) Computer keyboard holder is made of ⅜″ dia. wire and attaches to the bottom of the computer monitor holder (A).

(C) Cabinet comes with a lock and two keys.

(D) Outlet strip has three duplex outlets, an on/off switch, 15-amp circuit breaker, and 8-ft. power cord with three-prong plug. UL listed.

(E) Drawer comes with a lock and two keys.

(F) Light fixture adjusts in any direction and uses two 48″ fluorescent bulbs with medium bi-pin base (not included; see pg. 697). It comes with an on/off switch and 8-ft. power cord with three-prong plug. UL listed.

(G) Adjustable shelf tilts forward and backward 45°. It has a ⅝″ lip in the front and a plastic-laminate surface.

(H) Bin-box holder is fully adjustable and accepts hanging bin boxes (see 4666T on page 1604 for bin boxes).

Light Duty Workbenches

With Two Optional Drawers

Get the convenience of an adjustable-height workbench at an economical price. All components are made of 22- to 18-ga. steel. All have legs (with knockouts that accept duplex electrical outlets) that adjust in 1″ increments (leg bolts must be removed for positioning). They also have a 12″ deep lower shelf with a capacity of 150 lbs. Color is dark gray. Shipped unassembled.

Plastic-laminate top is nonconductive and has a particleboard core. Color is light gray.

Optional drawer has a capacity of 35 lbs. Overall size is 12″ Wd. × 18″ Dp. × 4″ Ht. Each workbench can hold up to two drawers. Mounting hardware included.

			48″ Wd. × 24″ Dp.			*60″ Wd. × 24″ Dp.*

Workbenches with Folding Legs

Out of sight and out of mind—the legs on these welded workbenches fold up for compact and convenient storage. To fold the legs, remove the wing nut that secures the leg braces. All workbenches are made of 14-ga. steel with a 12-ga. steel top. Legs adjust in 2″ increments (leg bolts must be removed for positioning). Color is light gray. Shipped assembled.

Size Wd. × Dp.	Ht.	Top Cap., lbs.		Each
72″ × 30″	28″-42″	3,000	1759T41	$440.80
72″ × 36″	28″-42″	3,000	1759T42	459.80
84″ × 36″	28″-42″	3,000	1759T43	494.00

Workbenches with Backstop and Side Stops

To keep your work from falling off the top, each workbench has a 3¾″ high backstop and side stops that taper from the back to the front of the work surface.

Workbenches are made of 18- to 12-ga. steel with a 12-ga. steel top. They have four angle iron legs, except 4754T83, which has six. Each leg has a foot plate with two ½″ dia. mounting holes for floor mounting (fasteners not included). Workbenches also come with a 1,000-lb. capacity steel fixed lower shelf and a 100-lb. capacity steel drawer. The drawer accommodates a padlock (padlock not included; maximum shackle dia. is ⅜″). The drawer is 14″ Wd. × 22″ Dp. × 6″ Ht., except 4754T16 and 4754T23, which are 12″ Wd. × 20″ Dp. × 5″ Ht. Color is dark green. Shipped unassembled.

Wd. × Dp. × Ht.	Top Cap., lbs.		Each	Wd. × Dp. × Ht.	Top Cap., lbs.		Each
36″ × 24″ × 35″	3,600	4754T16	$432.68	60″ × 29″ × 35″	7,500	4754T43	$520.75

Capacities listed are based on an evenly distributed load.

All-Welded Workbenches

All are fully welded and ready to use. Color is light gray.

Fixed-height workbenches are made of 12-ga. steel. All have foot plates with one 9/16″ dia. hole for floor mounting (fasteners not included). *Steel tops* are 12-ga. steel and are reinforced with angle iron. *Hardboard-over-steel tops* cushion your parts from shock, reduce vibration, and deaden sound. Workbenches *with lower shelf* have a 500-lb. capacity steel shelf.

Mobile fixed-height workbenches are steel and come with four swivel casters with 5″ dia. polyurethane wheels and brakes. Made of 14- to 12-ga. steel with a 12-ga. steel top. Workbenches *without lower shelf* have a steel crossbrace. Workbenches *with lower shelf* have a 1,000-lb. capacity steel shelf.

Adjustable-height workbenches have a 12-ga. steel top that's reinforced with angle iron. Legs adjust in 2″ increments (leg bolts must be removed for positioning). Workbenches *with lower shelf* have a 500-lb. capacity steel shelf.

Hercules All-Welded Workbenches

Mobile with Lower Shelf and Drawer

Adjustable Height with Lower Shelf

Welded for strength and stability, these workbenches have 7-ga. steel tops that offer our highest top capacities. Made of 12- to 7-ga. steel with angle-iron legs. All have a 500-lb. capacity steel lower shelf and come fully assembled. Color is light gray.

Workbenches are available with a steel drawer that is 30 5/8″ Wd. × 21 1/4″ Dp. × 7 1/2″ Ht. The drawer holds 250 lbs. and can accommodate a padlock (padlock not included; maximum shackle dia. is 1/2″).

Fixed-height workbenches have foot plates with one 5/8″ dia. mounting hole for mounting to the floor (fasteners not included).

Mobile fixed-height workbenches have two rigid and two swivel casters with 6″ dia. phenolic wheels and a floor lock.

Adjustable-height workbenches have legs that adjust in 1″ increments (leg bolts must be removed for positioning).

Stainless-Steel-Top Workbenches

NSF

Stationary without Backstop

Mobile with Backstop

An economical alternative to our Stainless Steel Workbenches on the next page, these NSF-certified workbenches have a 16-ga. Type 304 stainless steel top with 18- to 16-ga. galvanized steel legs and shelves. All have four legs, except 96″ wide models have six. The lower shelf adjusts in 2″ increments and has a capacity of 195 lbs., except the 96″ wide models have a capacity of 300 lbs. Shipped unassembled.

Stationary workbenches have adjustable feet to compensate for uneven floors.

Mobile workbenches come with four swivel casters (two with brakes), except 96″ wide models have six swivel casters (two with brakes). All include 4″ dia. rubber wheels.

Workbenches are available with and without a 2 3/4″ high backstop.

Capacities listed are based on an evenly distributed load.

Stainless Steel Workbenches

Stationary with Lower Shelf

Stationary with 5″ High Backstop without Lower Shelf

Mobile without Lower Shelf

Mobile with 5″ High Backstop, Lower Shelf, and Drawer

Offering good corrosion resistance, these NSF-certified workbenches are perfect for washdown, food service, and health care applications. All components are 18- to 16-ga. Type 304 stainless steel, unless otherwise indicated, with a 16-ga. Type 304 stainless steel top. All have four legs, except the 96″ wide models have six.

All-Welded Workbenches— All come ready to use.

Unassembled Workbenches— The connectors for bracing are made of die-cast aluminum.

Stationary workbenches have adjustable feet to compensate for uneven floors.

Mobile workbenches come with four swivel casters with brakes with 5″ dia. wheels. *All-welded models* have polyurethane wheels and *unassembled models* have polypropylene wheels.

Adjustable-height workbenches have legs that adjust in 2″ increments (leg bolts must be removed for positioning) and adjustable feet to compensate for uneven floors.

Stainless Steel Workbenches with Adjustable Wire Shelving

Workbench with Two Lower Shelves

Workbench with Two Lower Shelves and Two Upper Shelves

In addition to providing a corrosion-resistant, solid work surface, these NSF-certified workbenches have wire shelves that minimize dust collection, allow good ventilation, and permit light penetration for stored items. Perfect for food service, health care, and clean room applications. All components are 16-ga. Type 304 stainless steel with a 16-ga. Type 304 stainless steel top. Shelves adjust in 1″ increments and legs have adjustable feet to compensate for uneven floors. Shipped unassembled.

Workbenches ***with upper shelves*** have a maximum top shelf height of 63″. Upper shelves are 12″ deep.

Capacities listed are based on an evenly distributed load.

Drain-Top Workbench

Frustrated working with wet, messy parts? A sloped worksurface, drainage hole and plug, and 1½-gal. drain pan make this workbench the perfect choice when working with fluids. Workbench and top are made of 14-ga. steel; top has a 1¼″ lip on all sides. Workbench has steel legs that adjust on 1″ centers (leg bolts must be removed for positioning). Each foot has one ⅜″×⅝″ slotted hole for mounting to the floor (fasteners not included). It also has a 12″ deep steel lower shelf (100-lb. capacity) and a 12″ Wd.×18½″ Dp.×4″ Ht. drawer that has a capacity of 100 lbs. (includes a lock and two keys). Color is dark gray. Shipped unassembled.

Wd.×Dp.	Ht.	Top Cap., lbs.		Each
60″×30″	28″-42″	2,000	44945T37	$641.83

Wall-Mount Workbenches

Now you can have a full-size workbench that doesn't use valuable floor space. These workbenches offer the space-saving convenience you crave by mounting to the wall.

Workbenches offer good corrosion resistance and are NSF certified. They are made of 16-ga. Type 304 stainless steel and have a 16-ga. Type 304 stainless steel top with a 1½″ high backstop that has 5/16″ dia. mounting holes (all have five, except 48765T11 has three). Include two wall brackets, except 48765T13 and T14, which have three. Each wall bracket also has three 5/16″ dia. mounting holes. Mounting hardware is not included. Shipped assembled.

72″×24″×18½″	200	48765T14	438.04

Pedestal Workbenches

Workbenches are 24- to 18-ga. steel and have drawer and/or door pedestals that offer plenty of storage options for your tools and parts. Shipped unassembled.

(A-C) Workbenches with Backstop

Steel-top workbenches have a 3″ high backstop and ash-top workbenches have a 2 13/16″ high backstop. All have a recessed lower shelf. Drawers have a 60-lb. capacity and are 15″ Wd.×23¾″ Dp.×6¼″ Ht. The drawers (and door on Style B) accommodate a padlock (padlock not included; maximum shackle dia. is 9/32″). Color is dark gray.

Style A has one four-drawer pedestal and electrical knockouts in the leg.

Style B has one four-drawer pedestal and one door pedestal with a removable center shelf. Shelf has a capacity of 100 lbs.

Style C has two four-drawer pedestals.

Cabinet Workbenches

(C-F) Steel Workbenches— All have hinged doors, adjustable shelves, and a lock with two keys. Color is dark gray, except Style F, which is light gray. Shipped unassembled.

Workbenches without reversible top are made of 20- to 14-ga. steel. Both have a 16-ga. steel top with 2″ high backstop and side stops. Shelves adjust on 3″ centers.

Workbenches with reversible top have a top you can turn over so you can choose a work surface with or without 2″ high backstop, front stop, and side stops, unless otherwise indicated.

Style E is made of 24- to 14-ga. steel and has a 22-ga. steel top. Shelves adjust on 2″ centers.

Style F is made of 22- to 12-ga. steel and has a 14-ga. steel top. Shelf adjusts on 1½″ centers. Does not have a front stop.

(G-J) Stainless Steel Workbenches— All are NSF certified and are welded 18- to 16-ga. Type 304 stainless steel. The top is 16-ga. Type 304 stainless steel with a 4″ high backstop and the shelf is Type 430 stainless steel. The legs have adjustable feet to compensate for uneven floors. Shipped assembled.

Design-Your-Own Mobile Cabinet Workbenches

Basic Workbench Shown with Optional Drawers and Shelf

Start with the workbench then customize the interior by adding the optional drawers and shelves that best match your needs.

Workbench is made of welded 17- to 16-ga. steel with a 12-ga. steel top. It is divided into two compartments; each compartment has 15 notches on 1¾″ centers to hold any combination of drawers and shelves. Keep in mind, however, that the combination you choose can't use more than 15 notches. To see how many notches each drawer and shelf requires, see table below.

Both cabinet doors have a 13″ Wd.×½″ Dp.×8½″ Ht. interior storage pocket. For extra security, the workbench can be locked with a padlock (padlock not included; maximum shackle dia. is 1 1/16″). It comes with two rigid and two swivel casters with brakes with 6″ dia. phenolic wheels, and has a handle on one end for easy maneuvering. Shipped assembled, except for handle and casters. Color is tan.

Optional drawers and ***optional shelf*** are white.

	O'all Size, Wd.×Dp.×Ht.	O'all Cap., lbs.	Notches Used		Each
Workbench	46¼″×25″ ×37½″	1000	—	9978T27	$1,134.45

Shelf	17½″×21¾″× 1″	100	1	9978T6	83.28

Capacities listed are based on an evenly distributed load.

Mobile Cabinet Workbenches

Make your move—these cabinet workbenches have casters so you can roll them where you need them. All have a push handle (except Style M) for easy maneuvering.

A ***Polypropylene Workbench—*** You'll find this workbench is not only dent- and rust-resistant, but also sturdy. It has a skid-resistant work surface as well as five molded-in compartments for tools and other small parts. Drawers are red and include a locking bar that slides in front of the drawers and can be locked with a padlock (padlock not included; maximum shackle dia. is 1/4″). Comes with two rigid and two swivel casters with brakes with 4″ dia. polyethylene wheels. Shipped assembled.

B&C ***Steel Workbenches with Concealed Drawers—*** For added security, the drawers are concealed behind doors that have a recessed padlock housing (padlock not included; maximum shackle dia. is 5/16″). Workbenches are made of 16-ga. steel with a 16-ga. steel top. Come with a fixed shelf and two rigid and two swivel casters with brakes with 4″ dia. hard-rubber wheels. Shipped assembled, except for door handle and casters.

D-F ***Steel Workbenches with Pressed-Wood Top—*** These workbenches are made of 22- to 18-ga. steel and have a 3/4″ thick pressed-wood top with 3″ high backstop and side stops. The doors have a locking handle and two keys, shelves are adjustable on 5 1/2″ centers, and drawers (where applicable) have recessed handles. Come with two rigid and two swivel casters with 5″ dia. polypropylene wheels. Shipped unassembled.

G-H ***Narrow-Width Steel Workbenches—*** The choice for tight spots. Both are made of welded 20- to 14-ga. steel. The top is 14-ga. steel with 3/4″ high back and side stops. Each drawer can be locked with a padlock (not included; maximum shackle dia. is 3/8″). Come with two rigid and two swivel casters with 5″ dia. polyurethane wheels. Shipped assembled.

Style G has a door with a locking handle and two keys.

Style H has a tray in the top drawer for storing small parts.

J ***Steel Workbench with Reversible Top—*** You can turn the top of this workbench over so you can choose a work surface with or without 2″ high backstop and side stops. Workbenches are made of 22- to 12-ga. steel with a 14-ga. steel top. Shelf adjusts on 1 1/2″ centers. The door has a built-in locking handle and two keys. Comes with two rigid casters and two swivel casters with brakes with 3 1/2″ dia. polyurethane wheels. Shipped unassembled.

K-L ***Heavy Duty Steel Workbenches—*** Of all these mobile workbenches, these offer the highest load capacity. Both are made of 18- to 12-ga. welded steel. The top is 12-ga. steel with 2″ high backstop and side stops. The shelf is adjustable on 2″ centers; each door and drawer (where applicable) has a built-in lock and two keys per lock. Come with two rigid and two swivel casters with 5″ dia. polyurethane wheels. Shipped assembled.

Style L has three drawers. The top drawer includes a tray for storing small parts.

M ***Stainless Steel Workbench—*** Offering excellent corrosion resistance, this NSF-certified workbench is made of welded 18- to 16-ga. Type 304 stainless steel. The top is 16-ga. Type 304 stainless steel with 4″ high backstop. Shelf is fixed and made of Type 430 stainless steel. Comes with four swivel casters (two with brakes) with 4″ dia. hard rubber wheels. Shipped assembled.

Two-Wheel Mobile Cabinet Workbenches

Polyethylene

Steel

Simply tilt these workbenches on their two wheels to take them anywhere.

Polyethylene workbench is rust- and solvent-resistant and has a double-wall construction. It also has a lid that opens to become a 16″ Wd.×7½″ Dp.×3″ Ht. work surface. Inside the cabinet you'll find three 3⅜″ Wd.×4⅜″ Dp.×2¾″ Ht. bin boxes, two 30-lb. capacity shelves that adjust on 2″ centers, and a bottom compartment for storing bulky items. Both cabinet doors have two interior storage pockets. You can lock the cabinet with a padlock (not included; maximum shackle dia. is ⅜″). Comes with two 8″ dia. rubber wheels. Color is light gray. Shipped assembled.

Steel workbench is made of 20- to 18-ga. steel and has an 18-ga. steel top with a 3⅜″ high backstop. It also has a three-position adjustable push handle and a lock with two keys. Inside the cabinet you'll find one fixed shelf with a load capacity of 65 lbs. and three 25-lb. capacity drawers. One cabinet door has four removable 6.25-lb. capacity shelves; the other has a steel pegboard for hanging tools, cords, and more. Comes with two 10″ dia. rubber wheels. Color is red. Shipped assembled, except for handle, wheels, and feet.

Large-Capacity Cabinet Workbenches

A

B *Steel Workbench with One Drawer*

C

D

E NSF

Ideal when you need to work with and store many items.

(A&B) Steel workbenches without drawer and ***steel workbench with one drawer*** are shipped unassembled.

Style A are made of 22- to 16-ga. steel with a 12-ga. steel top with 3″ high backstop and side stops that taper down to 1½″ high at the front of the workbench. The doors have recessed handles and a built-in lock with two keys. Shelf adjusts on 1½″ centers.

Style B are made of 18- to 12-ga. steel with a 12-ga. steel top with 3¾″ high backstop and side stops that taper down to 1½″ high at the front of the workbench. Doors have a built-in lock with two keys. Come with a fixed shelf. Each foot has a ½″ dia. mounting hole for mounting to the floor (fasteners not included).

(C) Steel workbenches with three drawers are made of 18- to 12-ga. steel with a 1¾″ thick maple top. All drawers and doors have a lock with two keys. The middle drawer includes a tray for holding small items. Both workbenches come with a fixed shelf and kickplate. Each side panel has two ½″ dia. mounting holes for mounting to the floor (fasteners not included). Shipped unassembled.

(D) Steel workbenches with 16 drawers are made of 20- to 18-ga. steel; 4579T81 has a 12-ga. steel top and 4579T82 has a 1¾″ thick hardwood top. There's a tray in each drawer for holding small items and a padlock hasp on each drawer (padlock not included; maximum shackle dia. is ⅜″). Shipped assembled.

(E) Stainless steel workbenches offer good corrosion resistance and are NSF certified. These welded workbenches are 16-ga. Type 304 stainless steel with a 16-ga. Type 304 stainless steel top. Both have tops with 6″ high backstops and adjustable feet to compensate for uneven floors. Doors can be removed for cleaning. Shipped assembled.

Mobile Large-Capacity Cabinet Workbenches

Ideal when you need to work with and store many items, all workbenches have casters and a handle to make maneuvering easy. Shipped assembled.

(A&B) Standard workbenches are made of 18- to 12-ga. welded steel with a 48″ Wd.×26″ Dp. 12-ga. steel top with 3″ high backstop and side stops. They also have a 12″ Wd.×24″ Dp. exterior shelf (500-lb. capacity), two doors with lock and two keys, and one fixed interior shelf (1,000-lb. capacity). Come with two rigid and two swivel casters with 5″ dia. wheels. Color is light gray.

Style B have four 100-lb. capacity concealed drawers. Each drawer has recessed handles and a tray for storing small items.

(C&D) Heavy duty workbenches are made of 20- to 12-ga. welded steel and have a 48″ Wd.×28″ Dp. 12-ga. steel top with 3/16″ thick steel plate (except Style D has a 60″ Wd.×28″ Dp. top). Workbenches have two doors (one on the front; one on the back) with a locking handle with two keys, one fixed interior shelf (800-lb. capacity), and 50-lb. capacity drawers. For added security, the drawers can be concealed behind a locking panel (includes two keys) that slides out of the way when not in use. Come with two rigid and two swivel casters with 8″ dia. wheels; a floor lock keeps workbenches in place. Color is light gray with red drawers.

About Designing Your Own Workbench

Create a customized workbench to fit your needs. For a complete workbench, choose a ***top*** (pages 1663-1664) and either ***legs*** (pages 1665-1666) or a ***base*** (page 1667).

Workbenches up to 72″ wide require two workbench legs. Workbenches 96″ wide and larger require at least three workbench legs.

Stringers add stability to your workbench. You may also want to add ***drawers*** (pages 1667-1668), ***lower shelves*** (pages 1665-1666), ***upper shelves*** (page 1668), or a ***backstop and side stops*** (page 1668).

Note: Capacities listed for the workbench tops are for the tops only. Once you add legs or legs with casters to make a complete workbench, the capacity will change. The new capacity will be that of the component (***top, legs,*** and/or ***base***) with the lowest capacity.

Steel Tops

Made of 12-ga. steel, these heavy duty tops come with stringers for added stability. All are oil and stain resistant. They have a straight front edge. Fasteners for mounting legs included. Color is dark gray.

Note: For use with workbench legs 4885T and 4915T (see page 1665).

Wd.×Dp.×Thick.	Cap., lbs.		Each
60″×30″×1½″	2,500	**9054T113**	$139.75
72″×30″×1½″	3,000	**9054T115**	169.77
72″×36″×1½″	3,600	**9054T116**	192.21

Stainless Steel Tops

Offering strength as well as corrosion resistance, these tops are made of 16-ga. Type 304 stainless steel. All have an MDF (medium-density fiberboard) core and sealed plastic laminate bottom, making them great for food-service use. Tops are chemical, stain, oil, and impact resistant. They have a radius front edge. Fasteners for mounting legs included. NSF certified.

Wd.×Dp.×Thick.	Cap., lbs.	Without Backstop	Each	With 6″ High Backstop	Each
48″×24″×1½″	3,200	**5964T61**	$287.83	**5964T71**	$376.31
48″×30″×1½″	4,000	**5964T62**	334.09	**5964T72**	429.28

72″×30″×1½″	6,000	**5964T64**	409.07	**5964T74**	514.88
96″×30″×1½″	8,000	**5964T66**	524.11	**5964T76**	630.51

Cushioned Rubber Workbench Mats

Prolong the life of your workbench with these 1/8″ thick rubber mats. Not only do they protect tools and parts by cushioning them when they fall, but they also reduce noise. They are slip-, oil-, and solvent-resistant Buna-N rubber, which is 60A durometer. Color is black.

Fits Top Size, Wd.×Dp.		Each
48″×24″	**5510T11**	$55.24
48″×30″	**5510T21**	69.08
60″×30″	**5510T22**	85.03
72″×30″	**5510T23**	101.75
72″×36″	**5510T43**	124.30
96″×30″	**5510T24**	136.73

Capacities listed are based on an evenly distributed load.

For information about designing your own workbench, see page 1663.

Maple Tops

Straight

Radius

Solid pieces of maple are laminated together and sanded to assure durability. Unlike plastic-laminate tops, maple can be sanded and refinished. All tops are nonconductive, impact resistant, and have a mineral-oil finish (for mineral oil, see 3190K on page 2038). Fasteners for mounting legs included. NSF certified.

To Order: Please specify straight or radius front edge.

Wd. × Dp.	Cap., lbs.	1 3/4″ Thick Each		2 1/4″ Thick Each

Oak Tops

Bullnose

Similar to maple tops, except these tops offer higher capacities and are more consistent in color. They're made of solid pieces of oak that are laminated together and sanded to assure durability. Tops are nonconductive, impact resistant, and have a clear lacquer finish. They have a bullnose front edge. Fasteners for mounting legs included.

Wd. × Dp. × Thick.	Cap., lbs.		Each
60″ × 30″ × 1 3/4″	2,500	48885T31	$248.07
72″ × 30″ × 1 3/4″	3,000	48885T32	292.49
72″ × 36″ × 1 3/4″	3,600	48885T33	346.93

Particleboard Tops

Radius

An economical alternative to maple and oak tops, these tops have an MDF (medium density fiberboard) core between two high-density particleboard sheets that can be sanded and refinished. It is easy to mount drawers, shelves, and vises to these tops. They're nonconductive as well as impact, stain, oil, and chemical resistant. Tops have a clear lacquer finish and a radius front edge. Fasteners for mounting legs included. Color is light brown.

Wd. × Dp. × Thick.	Cap., lbs.		Each
48″ × 24″ × 1 3/4″	800	9064T32	$105.17

Plastic-Laminate Tops

Straight

Bullnose

With their extra-smooth surface, these tops won't trap dirt or oil, and they're easier to clean. All have a plastic-laminate surface that's bonded to a particleboard core. They're nonconductive and resist stains, abrasions, oils, and diluted chemicals. Fasteners for mounting legs included.

To Order: Please specify color: black, white, light gray (for straight edge), or medium gray (for bullnose edge).

Static-Dissipative Plastic-Laminate Tops

Straight

Bullnose

Tops resist stains, oils, and diluted chemicals, and they also protect circuit boards and other electronic components from electrostatic discharge (ESD). All tops have a static-dissipative, plastic-laminate surface that's extra-smooth and bonded to a particleboard core. Tops are nonconductive and won't trap dirt or oil. Surface resistivity is 10^6 to 10^9 ohms. They come with 3/8″ grounding snaps for attaching wrist straps (not included) and other static-control devices. Fasteners for mounting legs included.

***Straight Edge*—To Order:** Please specify color: beige or dark blue.

***Bullnose Edge*—**Color is beige.

Wd. × Dp. × Thick.	Cap., lbs.	Straight Edge Each		Bullnose Edge Each	
60″ × 30″ × 1 1/4″	962	4582T111	$168.98	4582T21	$183.49

Workbench Top Mounting Fasteners

Includes 50 zinc-plated Phillips pan-head screws (25 #14 × 3/4″ and 25 #14 × 1 1/2″) and 50 washers for mounting nonmetallic tops.

5118T33 ..... **Per Pkg.** $8.61

Sawhorses

Fixed Height

It's easy to store and transport these sawhorses—they fold to a compact 2″ Ht. × 38″ Wd. × 4″ Dp. Both are 14-ga. steel and have a convenient carrying handle. Color is orange. Shipped assembled.

Adjustable-height sawhorse allows five height adjustments in 4″ increments and can be set up on uneven surfaces. *Note:* As the adjusted height increases, weight capacity decreases.

	Open Ht.	Cap. per Sawhorse at 25″ Ht.	at 40″ Ht.		Each
Fixed Height	25″	1,000 lbs.	—	8055T29	$45.50
Adjustable Height	25″-40″	1,000 lbs.	812 lbs.	8055T31	58.64

Sawhorse Brackets

To make your own sawhorse, all you need are these brackets and five 2 × 4s (you can also use 2 × 6s and 2 × 12s). No need to hunt down fasteners—included wing nuts lock legs and rails into place. Made of polystyrene. Color is black.

	Cap. per Pair, lbs.		Per Pair
Brackets	500	8092T18	$16.70

Capacities listed are based on an evenly distributed load.

For information about designing your own workbench, see page 1663.

Workbench Legs with Electrical Knockouts and Accessories

All legs have knockouts on the front and back for adding duplex electrical outlets. They also have sixteen 5/16″ dia. holes for mounting tops (fasteners not included). Color is dark gray.

(A&B) Fixed Height—Legs are 13-ga. steel and flared for extra stability.

(C) Adjustable Height—Legs are made of 14- to 13-ga. steel and adjust in 1 1/2″ increments; simply remove and reposition leg bolts.

Stationary legs have two 3/8″ dia. holes per foot for securing to the floor (fasteners not included).

Mobile legs have two casters with 5″ dia. PVC wheels for maneuverability.

Stringers add stability and are 14-ga. steel.

Lower shelves are 16-ga. steel.

Heavy Duty Workbench Legs with Electrical Knockouts and Accessories

A higher capacity makes these legs more heavy duty than the other workbench legs with electrical knockouts on this page. Height is also adjustable—just loosen the built-in leg bolts to easily slide legs to any height from 29 1/8″ to 35 5/8″. Legs are 14-ga. steel with one set of knockouts on the front and back for adding duplex electrical outlets. They have four 11/32″ × 11/16″ slotted holes for mounting tops (fasteners not included). Each leg has adjustable feet to compensate for uneven floors. They also have two 3/8″ dia. holes and one 7/16″ dia. hole per foot plate for securing to the floor (fasteners not included). Color is light gray.

Stringers add stability and are made of 18-ga. steel.

Lower shelves are made of 16-ga. steel.

Extra Heavy Duty Workbench Legs and Accessories

Offering maximum strength, these legs are made of all-welded angle iron. They also have holes (see below for size and number) for mounting tops (fasteners not included). Color is dark green.

Adjustable Height—Adjust in 1″ increments; just remove and reposition leg bolts.

Stationary legs have two 1/2″ dia. holes per foot plate for securing to the floor (fasteners not included).

Mobile legs have two casters with 5″ dia. polyurethane wheels.

Stringers add stability and are 16-ga. steel.

Lower shelves are 12-ga. steel with a capacity of 1,000 lbs.

Recessed-Style Workbench Legs and Accessories

Specially designed legs provide more leg room than other leg styles. All legs are 14-ga. steel and have leveling feet to compensate for uneven floors. They also have six 1/2″ dia. holes for mounting tops (fasteners included). Color is light gray.

Adjustable-height leg adjusts in 1″ increments.

Stringers add stability and are 16-ga. steel.

Lower shelves are 16-ga. steel with a 50-lb. capacity.

Stainless Steel Workbench Legs and Accessories

Stationary Leg

Mobile Leg

An excellent choice for clean rooms, food-processing plants, and chemical plants, these legs are made of corrosion-resistant 16-ga. Type 304 stainless steel. The legs are 1⅝″ dia. and come with die cast aluminum connectors. The top mounting channel has ten 5/16″ dia. holes for mounting tops (fasteners included). NSF certified.

Stationary—Feet adjust to compensate for uneven floors.

Mobile—All come with swivel casters with a brake and 5″ dia. polyurethane wheels.

Stringers add stability and are made of 18-ga. Type 304 stainless steel.

Lower shelves are 18-ga. Type 304 stainless steel; capacity is 200 lbs.

Fold-Away Table Legs

Fixed-Height Curved Style

Adjustable Height

For easy transport and storage, these legs fold flat against the table top you mount them to. All have plastic foot glides to protect your floors and twelve 1/4″×1/2″ slotted holes for mounting tops (fasteners not included). Shipped assembled.

Fixed-height legs are made of 16-ga. zinc-plated steel tubing.

Adjustable-height legs are made of 18-ga. steel tubing. They adjust in 1″ increments by pushing in a button and sliding the leg. Frames are black with chrome-plated extension tubes.

Hydraulic Lift Kits

With Adjustable Feet and Pump with Hand Crank (Workbench Not Included)

Transform your fixed-height workbench into an adjustable-height work surface with one of these kits. All come with four aluminum hydraulic-lift cylinders, one hydraulic pump, and tubing (hydraulic lines) to connect cylinders to the pump. Tubing comes in the following lengths: 60″, 60″, 96″, and 96″.

To use, attach each cylinder to your workbench leg with four 1/4″-20 screws (not included; length of screws required depends on the leg thickness). Then, mount the pump under the workbench top and connect cylinders to the pump with the provided tubing.

Kits with Hand Crank—All have a retractable, folding hand crank. Pump has three 1/4″ dia. holes for mounting (fasteners not included).

Kits with Electric Motor—Adjust height with just a push of a button. Pump and motor are attached to a plate with seven 1/4″ dia. holes for mounting to workbench (fasteners not included). Motor is 1/9 hp and operates on 110/115 VAC, 50/60 Hz, single phase. Comes with a rocker switch with two 3/16″ dia. holes for mounting to your workbench (fasteners not included) and an 8-ft. power cord with three-prong plug.

Kits with adjustable feet compensate for uneven floors.

Kits with casters have swivel casters with brake and 3″ dia. polyolefin wheels for mobility.

47105T48 ..... Each $38.59

Single-Column Table Legs

Fixed Height with Standard Base

Fixed-Height Mobile with X-Base

Adjustable Height with T-Base

Great for use in your office as well as for light duty workbench applications. All are made of 13-ga. steel tubing. Mobile models have casters, and all other models have leveling feet to compensate for uneven floors. Come with fasteners for attaching table tops. Color is black.

Mobile legs have swivel casters with brake and 2″ dia. nylon wheels.

Adjustable-height legs have a spring clip that allows you to adjust legs in 1″ increments.

Pedestal Workbench Bases

Create a workbench with the storage space you need by pairing pedestal bases with a top (top and fasteners not included). For tops, see pages 1663-1664. Shipped unassembled.

(A) Standard

Pedestal bases and components are 20-ga. steel. Pedestals come with a 5″ high removable bottom base (removing the bottom base will lower the height to 27″). Each drawer and door have one knockout for adding an optional lock (not included; please ask for 48735T11 and specify keyed alike or keyed differently). Color is dark gray.

Drawer pedestals have 13″ Wd.×19″ Dp. drawers.

Cabinet pedestal has an interior shelf that adjusts on 3″ centers. The cabinet door can open to the right or left by turning the pedestal base over.

(B) Heavy Duty

Pedestal bases and components are 20- to 12-ga. steel. Both drawer pedestals have a single cylinder lock with two keys that locks all drawers at once. Each drawer is 25⅛″ Wd.×25⅛″ Dp.

Panel leg acts as a benchtop support when using only one pedestal base. It has knockouts to accept duplex electrical outlets (not included).

Upper shelves have a 1¼″ thick light gray plastic-laminate top. Shelf supports have knockouts that accept duplex electrical outlets. A brace on the back has a flange for hanging bin boxes (not included).

To Order: For all pedestal bases and components, please specify color: blue or light gray.

Adjustable-Height Hand-Crank Workbench Bases

No need to waste time clearing workbench tops and loosening bolts—a hand crank makes these bases easier to adjust than our adjustable-height workbench legs. All hand cranks are retractable. Bases have six ⅜″ dia. holes for mounting tops (fasteners not included).

(C) Pedestal base is welded 7-ga. steel tubing. Includes a 16″ square mounting plate with four ⅜″ dia. holes for securing base to the floor (fasteners not included). Color is beige. Shipped assembled.

(D) Four-leg bases are made of 11-ga. steel tubing and have leveling feet. Color is beige. Shipped assembled.

(E) Mobile two-leg bases come with four locking swivel casters with 4″ dia. polyurethane wheels. All are made of 7-ga. steel tubing. Color is beige. Shipped assembled.

Design-Your-Own Workbench Drawers

Two Stacked Light Duty Drawers

Three Stacked Heavy Duty Drawers

Stack these drawers under your workbench. All have ball-bearing rollers and come with hardware to mount them to each other and to your workbench.

Light duty steel drawer is made of 22-ga. steel. Each drawer has one knockout for adding an optional lock (not included; please ask for 48735T11 and specify keyed alike or keyed differently). Color is dark gray.

Heavy duty modular steel drawers are made of 18-ga. steel with steel drawer hangers. You can stack drawers with different heights as long as they have the same depth. All come with a lock with two keys. Color is light gray.

Light Duty Steel Drawer

Inside Size, Wd.×Dp.×Ht.	Cap., lbs.		Each
15⅜″×19¼″×47⅞″	50	4811T61	$74.18

Heavy Duty Modular Steel Drawers

14″×11″	75	3330T53	152.19	3330T63	183.73

Capacities listed are based on an evenly distributed load.

For information about designing your own workbench, see page 1663.

Workbench Drawers

For added storage, mount these drawers below your workbench top. Mounting fasteners included (unless otherwise indicated).

Plastic Drawer

Perfect for high-moisture areas, this rust-resistant drawer is made of polystyrene with polypropylene glides. It has six 1/8″ dia. holes for mounting (fasteners not included). Color is beige.

Inside Size, Wd.×Dp.×Ht.	Cap., lbs.		Each
15 3/8″×14 5/8″×3 7/8″	20	4614T32	$20.15

Stainless Steel Drawers

Our corrosion-resistant drawers are 22-ga. Type 304 stainless steel with polyethylene slides. They have four 5/16″ dia. holes for mounting (fasteners not included). NSF certified.

Inside Size, Wd.×Dp.×Ht.	Cap., lbs.		Each
15″×20″×5″	40	4405T88	$89.22
20″×20″×5″	40	4405T89	123.59

Heavy Duty Steel Drawers

With Tray and Cylinder Lock

Made of rugged 18-ga. welded steel, drawers have welded-on steel runners and a tamperproof steel top. Each drawer top has eight 9/32″ dia. holes for mounting. Color is dark green.

Models ***with padlock hasp*** can accommodate a padlock (not included; max. shackle dia. of 3/8″). Models ***with tray and cylinder lock*** have a tray for small items and a cylinder lock with two keys.

Workbench Cabinets

One Door

Storing larger items under your workbench is easy with one of these cabinets. Made of 20- to 18-ga. welded steel, both have a 200-lb. capacity fixed shelf and a locking handle with two keys. They have four 7/16″ dia. holes for mounting, except the 36″ wide model has six (mounting hardware not included). Color is light gray. Shipped assembled.

O'all Size, Wd.×Dp.×Ht.	Cap., lbs.	No. of Doors		Each

Upper Shelves for Workbenches

Standard One Shelf

Standard Two Shelves

Adjustable Two Shelves

Adjustable Three Shelves

Add storage space to the top of your workbench for equipment, manuals, and more. Shipped unassembled.

Standard shelves are 16-ga. steel with 2″ high backstops. **To Order:** Please specify color: beige or dark gray.

Models with *two shelves* have a lower shelf that rises 7″ above your workbench top and has two removable dividers to organize your work.

Adjustable shelves are made of 14- to 12-ga. steel with 1 3/4″ high backstops. All shelves can be positioned at any angle and can be reversed so the backstop is at the front to hold books or literature. Color is light gray.

Steel Workbench Pegboards

Create a more efficient and organized workbench with these steel pegboard panels and accessories. Simply mount posts to the top of your workbench (there are four 3/8″ dia. holes per footplate for mounting to the workbench; hardware not included), connect the panels to the posts, and add the accessories you need. Pegboard holes are 5/16″ square and are on 1 1/2″ centers. Panels are mounted with 7″ of clearance above workbench. Made of 16- to 14-ga. steel. Color is light gray.

Steel Machine Tables

(A) Light Duty— Assemble these tables with a flat top (as shown) or with a top with 2″ high lip around the edge by turning the top over. The legs are angle iron with corner braces, and the tops are made of 16-ga. steel. Color is dark green. Shipped unassembled. **To Order:** Please specify height from those listed.

Mobile models have swivel casters with brake and 2″ dia. hard-rubber wheels.

(B&C) Medium Duty— All have welded construction, angle-iron legs, and a 12-ga. steel top. Color is light gray. Shipped assembled. **To Order:** Please specify height from those listed.

Mobile models have swivel casters with brake and 3″ dia. hard-rubber wheels.

Style C include a 13″ Wd.×15″ Dp.×5″ Ht. 40-lb. capacity drawer.

(D&E) Medium Duty with Shelves— These machine tables have welded construction, angle-iron legs, and a 12-ga. steel top and shelves. Color is light gray. Shipped assembled.

Stationary models have one 9/16″ dia. hole per footplate for mounting to the floor.

Mobile models have swivel casters with brake and 3″ dia. polyolefin wheels.

(F) Heavy Duty— All have welded construction, angle-iron legs, and a 12-ga. steel top and lower shelf. Color is light gray. Shipped assembled. *Stationary* models have one 9/16″ dia. hole per footplate for mounting to the floor.

Mobile models have swivel casters with brake and 3″ dia. polyolefin wheels.

Steel Machine Tables with Maple or Particleboard Tops

A Stationary

B Stationary

Don't be fooled by their good looks. All tables have a rugged, nonconductive top and welded frame. Metal components are light gray. Shipped assembled.

(A) With Maple Top—Machine tables have a 1¾″ thick impact-resistant maple top that has a varnish finish. The legs and frame are angle iron.

Stationary models have leveling feet that allow you to adjust height.

Mobile models have swivel casters with brake and 3″ dia. hard rubber wheels.

(B) With Particleboard Top—All have a 1⅜″ thick particleboard top with hardwood edging around all sides and a clear vinyl finish. Top resists corrosion, mild chemicals, and oils. Legs and frames are 18-ga. steel. **To Order:** Please specify height from those listed.

Stationary models have one ⅜″ dia. hole per foot plate for mounting to the floor. *Mobile* models have four swivel casters (two with brake) with 4″ dia. hard rubber wheels.

(C) With Particleboard Top, Lower Shelf, and Drawer—These machine tables are just like Style B above, except they come with a 250-lb. capacity lower shelf and a 15″ Wd.×20″ Dp.×6″ Ht. drawer that has a capacity of 100 lbs. **To Order:** Please specify height from those listed.

Stainless Steel Machine Tables

NSF

Stationary

Mobile

Good for corrosive environments, all tables are made of welded 18- to 14-ga. Type 304 stainless steel and have a lower shelf for added storage space. Shipped assembled. NSF certified.

Stationary models have adjustable feet to compensate for uneven floors.

Mobile models have four swivel casters with brake and 5″ dia. polyurethane wheels.

Heavy Duty Ultra-Precise Steel Machine Tables

Able to hold a whopping 35,000 lbs., these tables have the highest capacity of any machine table we offer. They have an all-welded construction, and the legs are steel angle iron with cross bracing for added strength. They also have tops that are ground to a flatness tolerance of 0.002″ per linear foot. The bottom of each leg has two tapped holes (1/2″-13 and 5/8″-11) and one drilled hole (17/32″ dia.) for mounting to the floor (mounting fasteners not included). Color is light gray with an unpainted top. Shipped assembled. **To Order:** Please specify height: 24″, 30″, 32″, 34″, or 36″.

Wd. × Dp.	O'all Cap., lbs.	Top Thick.		Each

Vibration-Damping Machine Tables

Also known as balance tables, these machine tables provide superior vibration control for all your sensitive equipment. They also provide excellent resistance to impact, thermal shock, stains, and harsh chemicals. Both are made of 3″ thick nonporous, molded marble. They come with a black 2″ dia. cast iron cross brace that strengthens the legs. Color is white. Shipped unassembled.

Wd. × Dp. × Ht.	O'all Cap., lbs.		Each
35″ × 24″ × 31″	1,000	4820T31	$1,205.67
35″ × 24″ × 36″	1,000	4820T32	1,276.60

Mobile Slope-Top Instrument Tables

The sloped top positions your multimeters, oscilloscopes, and other instruments at a convenient height and viewing angle. All surfaces are nonconductive, nonmarring, and heat resistant. Legs and frame are made of 18-ga. galvanized steel tubing. Each top has 1 1/4″ high side stops and an adjustable support arm with rubber bumpers to hold your instruments in place. All tables have a 75-lb. capacity removable lower shelf and four swivel casters with 3″ dia. rubber wheels. Shipped unassembled.

The top and shelf are either 3/4″ thick UV-coated birch plywood with a light woodgrain finish or 5/8″ thick light gray plastic laminate over particleboard. Birch plywood is slightly stronger than plastic laminate, but plastic laminate is easier to clean.

Top Size, Wd. × Dp.	Ht. (A)	Ht. (B)	O'all Cap., lbs.	Birch Plywood Top and Shelf	Each	Plastic-Laminate Top and Shelf	Each

Tables

All tables have a particleboard top with a plastic-laminate surface and a steel frame. Shipped unassembled. **To Order:** Please specify top color: light gray, oak, or walnut (unless noted). *Note:* Walnut is darker than oak.

(A) Standard tables have legs with a chrome-plated finish. *Light gray tops* have a light gray frame. *Oak-color tops* have a beige frame. *Walnut-color tops* have a black frame.

(B) Tables with lower shelf are perfect when you need a shelf for extra storage. *Light gray* and *walnut-color tops* have a black frame and legs. *Oak-color tops* have a brown frame and legs.

(C) Adjustable-height tables adjust in 1″ increments. *Light gray tops* have a dark blue frame and legs. *Oak-color tops* have a black frame and legs.

(D) Adjustable-height tables with recessed legs adjust in 1″ increments, have recessed legs for extra leg room, and have a black modesty panel for privacy (except tables with *oak-color tops* have a beige modesty panel). Legs are steel with a chrome-plated finish and have adjustable leveling glides to compensate for uneven floors.

♦ Walnut top is not available.

Capacities listed are based on an evenly distributed load.

Tables with Pedestal Base

No matter where you sit, you'll always have plenty of leg room thanks to the pedestal bases on these tables. All pedestals are steel with a cast iron base; the pedestal and base are both black and come with adjustable leveling feet to compensate for uneven floors. All tables have a particleboard top with a plastic-laminate surface. Shipped unassembled. **To Order:** Please specify top color: light gray, oak, or walnut. *Note:* Walnut is darker than oak.

	O'all Size Wd. × Dp.	Ht.	Top Thick.	Top Cap., lbs.	Base Dia.		Each

B	48″ Dia.	29″	1¼″	350	30″	**9610T16**	232.45

Tables with Folding Legs

Transporting and storing these tables is easy—the legs fold up and out of the way when not in use. All have a particleboard top (except Styles D, E, and F, which are plywood) with a plastic-laminate surface and steel frame. Legs are steel and come with nonmarring plastic feet. Shipped assembled.

To Order: Please specify color from choices below (unless otherwise indicated). *Note:* Walnut is darker than oak.

- Walnut-color top with black frame and legs.
- Oak-color top with brown frame and legs.
- Light gray top with black frame and legs.

(C) Standard tables are economical. *Walnut-color tops* have a brown frame and legs. *Light gray tops* have a light gray frame and legs.

(E) Heavy duty conference room tables have a thicker top. The plastic feet adjust to compensate for uneven floors.

(F) Heavy duty tables with recessed legs provide added leg room, thanks to their recessed legs.

(G) Adjustable-height tables adjust in 1″ increments. *Walnut-color tops* have a brown frame and legs. *Light gray tops* have a light gray frame and legs.

(H) Mobile adjustable-height tables roll where you need them and adjust in 1″ increments. All come with four swivel casters (two with brake) with 3″ dia. hard-rubber wheels. The lower portion of the legs are chrome plated.

Aluminum Tables with Folding Legs

Lightweight does not mean light duty. Made entirely of high-strength aluminum, these tables are lighter than similarly sized tables. Their lighter weight makes them easy to transport and store. They are rust and corrosion resistant and will not crack or warp after extended exposure to moisture, heat, and sunlight. Cast aluminum inserts protect corners, and legs have nonmarring feet. Legs and corner inserts are dark gray. Shipped assembled.

O'all Size Wd. × Dp.	Ht.	Top Thick.	Top Cap., lbs.		Each

96″ × 30″	29½″	1½″	4,000	**5234T18**	495.00

Capacities listed are based on an evenly distributed load.

Polyethylene-Top Tables with Folding Legs

Not only are these tables stain resistant, but they're also lightweight and easy to clean. Their legs fold up and out of the way, making them easy to transport and store. They come with non-marring plastic feet. The top is white; frame and legs are black steel (unless otherwise indicated). Shipped assembled.

(A&B) Rectangular tables are impact and chemical resistant.

Style B tables adjust in 1″ increments.

(C) Center-folding rectangular table folds in half and has a built-in carrying handle. Legs and frame are brown steel.

(D) Round table is impact and chemical resistant.

For Rectangular Tables

For Round Tables

Food-Service Tables

With built-in benches, you'll never have to worry about finding chairs for these tables. Shipped unassembled, except Style F.

Indoor Tables—All have particleboard tops and benches with a walnut-color plastic-laminate surface. The frame has welded construction.

Style E have steel frames and are tan. Come with adjustable plastic feet to compensate for uneven floors.

Style F fold in half and roll on four swivel casters with 4″ dia. polyolefin wheels for compact storage and convenient mobility. Frames are steel and are black. All come with nonmarring plastic feet that provide stability when tables are open.

Outdoor Picnic Tables—All are corrosion resistant.

Style G are economical and have redwood-stained pine tops and benches.

Style H have aluminum tops and benches that make these tables lighter and easier to move than our other picnic tables.

Style J is made from post-consumer and industrial recycled plastic. It will not rust, rot, or crack; is UV resistant; and requires very little maintenance. Top and benches are brown. Frame has a molded one-piece construction and is black.

You can use this galvanized steel frame to build a table using your own wood top and benches. It can also be used as a replacement frame for Styles G and H. Mounting hardware included.

Galvanized Steel Frame Only ..... 9814T26 **Each** $344.32

Capacities listed are based on an evenly distributed load.

Stand-Up-Height Desks

Whether you are standing or sitting on a stool, these desks are perfect for shipping, receiving, and similar applications. They have a writing surface and a storage space both above and below the writing surface.

(A-G) Stationary Desks

All have a drawer directly below the writing surface.

(A-D) Light and Medium Duty Steel— Shipped unassembled.

Style A are dark gray. *Light duty desk* has a 75-lb. capacity lower shelf and a drawer that includes a lock and two keys. *Medium duty desk* has a 125-lb. capacity lower shelf and a drawer that includes a lock and one key.

Style B has a 75-lb. capacity lower shelf and three additional file drawers. (One drawer is 13″ Wd.×20″ Dp.×5″ Ht.; the other two are 13″ Wd.×20″ Dp.×12¼″ Ht.). All drawers have recessed drawer pulls. The drawer under the writing surface includes a lock and two keys. The two large file drawers have knockouts for adding a lock (not included; please ask for 48735T11 and specify keyed alike or keyed differently). Color is dark gray.

Style C have a lower cabinet with an interior shelf that adjusts on 3″ centers. Drawer and cabinet door include a lock and two keys, except the medium duty desk, which only comes with one key.

Light duty desk has a 32″ Wd.×28″ Dp.×28¼″ Ht. cabinet. The shelf has a capacity of 350 lbs. Color is dark gray.

Medium duty desk has a 34½″ Wd.×27½″ Dp.×34½″ Ht. cabinet. The shelf has a capacity of 125 lbs. Color is light gray.

Style D has a top cabinet and lower shelf. Drawer and cabinet door have recessed drawer and door pulls; include locks with two keys. The cabinet is 31½″ Wd.×14¼″ Dp.×18¼″ Ht. and has a fixed 300-lb. capacity shelf. The lower shelf has a capacity of 400 lbs. Color is tan.

(E-G) Heavy Duty Steel— Shipped assembled.

Style E has three additional 12″ Wd.×22½″ Dp.×9¼″ Ht. file drawers. All drawers have pull handles and include a lock and two keys. This desk also has a 250-lb. capacity lower shelf. Color is light gray.

Style F is fully welded and has a 950-lb. capacity lower shelf. Drawer has a padlock hasp (padlock not included; max. shackle dia. is 7/16″). Each leg has one ¾″ dia. mounting hole (fasteners not included). Color is dark gray.

Style G is fully welded and has a lower cabinet with a 2,250-lb. capacity interior shelf that adjusts on 2″ centers. The drawer and cabinet door both have a padlock hasp (padlock not included; max. shackle dia. is 7/16″ for the drawer and ½″ for the cabinet door). The cabinet is 36″ Wd.×28″ Dp.×36″ Ht. Legs have ¾″ dia. mounting holes. Color is dark gray.

(H-K) Mobile Desks

Casters provide easy maneuvering. All mobile desks are shipped assembled and ready to use, except Style J.

(H) Light Duty and Stainless Steel— Desks have a lift-up top with an interior storage compartment; top includes a lock and two keys. Desk also has a lower shelf and comes with four swivel casters (two with brake) that have 5″ dia. polyurethane wheels.

Light duty desk is light gray. Shelf capacity is 100 lbs.

Stainless steel desk is made of series 300 stainless steel. Great for food-service applications. Shelf capacity is 125 lbs. NSF certified.

(J) Medium Duty Steel— This desk is fully welded and has two drawers and a cabinet. Drawers and cabinet door include locks and two keys. Cabinet is 23″ Wd.×20″ Dp.×20¾″ Ht. and has a fixed shelf with a capacity of 50 lbs. A ½″ lip on the front of the writing surface keeps items from rolling off the desk. Comes with four swivel casters that have 3″ dia. soft-rubber wheels. Shipped assembled, except for storage unit and casters. Color is dark gray.

(K) Heavy Duty Steel— This high-capacity desk is fully welded and has a drawer and lower shelf. The drawer has a padlock hasp (padlock not included; max. shackle dia. is 7/16″). Shelf has a capacity of 950 lbs. Comes with four casters (two rigid; two swivel) that have 6″ dia. rubber wheels. Has a floor lock to keep desk in place. Color is dark gray.

Easy-to-Move Stand-Up-Height Desk with Document Holders

Hate to be away from your desk? You can take this easy-to-move desk with you. The writing surface comes with a clear, acrylic document protector and two clips for holding papers. Writing surface and back panel are made of yellow polystyrene. The pedestal base provides maximum leg room and comes with plastic feet; it is made of steel with a black finish. Shipped unassembled.

Document protector for back display panel is hinged and made of clear acrylic.

Center tray is 20 3/16″ Wd. × 9 7/16″ Dp. × 4 3/8″ Ht. and comes with a lock and two keys. Made of steel.

Side tray is 7 7/8″ Wd. × 7 1/2″ Dp. Made of steel.

Vertical file holder has three 2″ wide sections. Made of steel.

Casters have 3″ dia. hard-rubber wheels. All swivel and have a brake.

Desks

In addition to a sturdy, 25- to 16-ga. steel construction, these desks include drawers for storage. Desk tops are particleboard with a plastic-laminate surface. A modesty panel provides privacy, and adjustable feet compensate for uneven floors.

To Order: Please specify color from choices below, unless noted. *Note:* Walnut is darker than oak.

- Walnut-color top with black base
- Walnut-color top with tan base
- Oak-color top with beige base
- Light gray top with light gray base

Styles A&B— The legs are steel with a chrome-plated finish. The center drawer and the set of pedestal drawers each lock individually. Desks come with two keys per lock. Shipped assembled, except for legs and drawer handles.

Style C— For a more contemporary look, this desk has two panel-style legs and recessed handles. Each set of pedestal drawers locks individually with a lock and two keys. Desk comes with two wire-management grommets to accommodate wiring. Shipped assembled.

Desks and Accessories

Select the components you need to create the perfect desk configuration that can be changed as your needs change. Desk height can be adjusted in 1″ increments. They include removable modesty panels for privacy (one on rectangular desks; two on corner desk). Tops are particleboard with a plastic-laminate surface, and legs are chrome-plated steel. Shipped unassembled. **To Order:** Please specify top color: walnut, oak, or light gray. *Note:* Walnut is darker than oak.

Corner desk connects two rectangular desks. The two connecting sides are 30″ deep; angled front is 25″ wide.

Slide-out keyboard holder is 23″ Wd. × 12″ Dp. and is made of 3/4″ thick laminated particleboard. Mounting fasteners included. Color is black.

Adjustable CPU holder adjusts from 5 1/2″ to 9 1/4″ wide and 14 5/8″ to 20 1/2″ high. Made of steel. Mounting fasteners included. Color is black.

Two-drawer pedestal is 15″ Wd. × 19 1/2″ Dp. × 19 1/2″ Ht. It has two 100-lb. capacity drawers: 13″ Wd. × 16″ Dp. × 7″ Ht. and 13″ Wd. × 16″ Dp. × 12″ Ht. The pedestal also comes with a lock and two keys. Made of steel. Mounting fasteners included. **To Order:** Please specify color: black or beige.

Wall-Mount Desks

Now you can have a writing surface without sacrificing an inch of floor space. *Note:* Capacity may be reduced due to wall material, shelf material, and fastener choice.

(A) Fold-Up Desks— Simply pull desks down when you need them and fold them up when you're through. Desks protrude 2½″ from the wall when folded. They have 2″ side stops, a spring clip for holding papers, and built-in pockets for storing forms, cards, and pencils. They have four 3⁄16″ dia. holes for wall mounting (mounting fasteners not included). Shipped assembled.

Steel desk has an 18-ga. steel writing surface. **To Order:** Please specify color: beige, dark gray, or white.

Stainless steel desk has a 20-ga., Type 304 stainless steel writing surface.

(B) Lift-Top Desks— Lift the top and you'll find a storage compartment. Desks also have a storage area above the writing surface and two supporting braces that extend from the desk to the wall.

Steel desk is 20-ga. steel and has two ½″ dia. keyhole slots on the back and one 9⁄32″ dia. hole in each brace for wall mounting (mounting fasteners not included). Top includes a lock and one key. Color is light gray. Shipped unassembled.

Stainless steel desk is 20-ga. 300 series stainless steel. There are two 3⁄16″ dia. holes on the back and two ¼″ dia. holes in each brace for wall mounting (mounting fasteners not included). Top includes a lock and two keys. Shipped assembled.

(C) Large Desk with Drawer— Our largest wall-mount desk—it has a drawer below the writing surface and a storage area above the writing surface. The drawer measures 24″ Wd.×28″ Dp.×3½″ Ht., has a capacity of 50 lbs., and comes with a lock and two keys. The writing surface is 20-ga. steel. Two supporting braces extend from the desk to the wall (mounting fasteners included). Color is dark gray. Shipped unassembled.

Adjustable Slant-Top Desks

Drawing, drafting, and writing are more comfortable than ever—not only can you adjust the height from 29″ to 46″, but you can also change the slope of the top from 0° to 40°. Tables have a particleboard top with white plastic-laminate surface. Base is steel with adjustable leveling feet to compensate for uneven floors. They have a 42″ Wd.×12″ Dp. fixed lower shelf and a modesty panel for privacy. Shipped unassembled. *Note:* Not rated for capacity.

To Order: Please specify color of base: black or white.

Computer Workstations

(D) Stationary fold-away workstation folds down to a mere 5¼″ high for convenient storage. The height and angle of the keyboard tray adjusts in ¼″ increments. Monitor shelf and keyboard tray are made of ¾″ thick particleboard with a light gray plastic-laminate surface; legs are made of steel and have plastic feet. Shipped assembled.

(E) Stationary plastic workstation is not only made of durable, scratch-resistant polyethylene, it is also easy to clean. It snaps together for easy assembly—no tools are needed. Comes with a monitor shelf, pull-out keyboard tray with built-in wrist rest, and a mouse platform that mounts on either side of the keyboard tray. Also comes with a mobile printer stand with one fixed shelf and two 3½″ dia. polystyrene wheels. Stand is 21″ Wd.×17″ Dp.×14″ Ht. and can be stored under the workstation. Color is dark gray, except the top of the workstation is light gray. Shipped unassembled.

(F) Mobile workstation has four swivel casters (two with brake) with 1½″ dia. polypropylene wheels that let you easily move your computer from place to place, while a 2½″ high monitor safety rail keeps your monitor from sliding off the back. Unit has a monitor shelf, pull-out keyboard tray, a mouse platform that mounts on either side of the keyboard tray, two fixed lower shelves, and a CPU holder that adjusts from 8″ to 10″ wide and is for use on the left or right side. Made of steel. Color is light gray. Shipped unassembled.

● Depth is measured from the back of the keyboard shelf to the back of the workstation.

Capacities listed are based on an evenly distributed load.

Adjustable-Height Mobile Computer Workstations

Work in a sitting or standing position—adjust the height on these units for your comfort. All have four swivel casters (two with brake). Shipped unassembled.

Laptop adjustable workstation has a knob to adjust the height. Shelf is angled, adjustable, and is made of black plastic laminate with a particleboard core. Casters have 2″ dia. polypropylene wheels. Includes a wrist rest. Frame is black steel.

Desktop adjustable workstation is screw adjustable in 1″ increments to raise and lower the monitor shelf. Includes a pull-out keyboard tray and a mouse platform that pulls out on either side of the keyboard tray. The CPU holder adjusts from 8″ to 10″ wide and can be used on the left or right side. Unit also has one fixed shelf and one adjustable shelf. Casters have 3″ dia. rubber wheels. Frame is gray steel and shelves are black plastic laminate with a particleboard core.

Desktop air-adjustable workstation has an air cylinder that easily raises and lowers monitor shelf to the desired height. A rail on the monitor shelf prevents your monitor from sliding backwards. The keyboard/mouse tray adjusts inward and outward from the edge of the monitor shelf up to 4″. The CPU holder on the bottom of the workstation accommodates up to a 10″ wide CPU. Casters have 2″ dia. nylon wheels. Frame is black steel and shelves are teak laminate.

Laptop Adjustable *Desktop Adjustable* *Desktop Air Adjustable*

Cabinet-Style Computer Workstations

The top compartment has a PETG window that shields your monitor while providing a clear view of the screen. A pull-out tray holds your keyboard. Workstations are made of 20- to 18-ga. steel, have louvered cutouts for ventilation, and have wire-management grommets to accommodate wiring. Shipped assembled.

To Order: Please specify color: beige, blue, or light gray.

Tabletop workstation has one lock on the compartment door and one on the keyboard tray. Locks are keyed alike. Two keys are included.

Mobile workstation has one shelf in the bottom compartment that adjusts in 2⅜″ increments to accommodate your CPU and printer. Each of the following components has one lock: top compartment door, keyboard tray, bottom compartment door, and rear access door. All locks are keyed alike. Two keys are included. Unit has four swivel casters (two with brake) with 4″ dia. hard-rubber wheels.

Hercules Cabinet-Style Computer Workstations

Made of sturdy 12-ga. welded steel, these workstations are built to endure the demands of tough warehouse and plant environments. A polycarbonate window in the top compartment shields your monitor while providing a clear view of the screen. The monitor shelf is perforated to keep equipment cool. The bottom compartment has two shelves that adjust on 2″ centers. To keep the air inside clean and circulating, units come with a fan/filter assembly that has a 3-ft. cord with two-prong plug. A pull-out tray holds your keyboard. Units come with a seven-outlet, 15-amp surge suppressor outlet strip that has a 6-ft. cord with three-prong plug. Doors have a locking handle that accepts a padlock (not included; max. shackle dia. is 7/16″ for the drawer and ½″ for the door). Color is dark gray. Shipped assembled.

Stationary workstation has four 6″ high steel legs with one ¾″ dia. mounting hole per leg for mounting to the floor (mounting fasteners not included).

Mobile workstation has two swivel and two rigid casters with 6″ dia. rubber wheels. Also comes with a floor lock.

Computer Printer Stands

Low Profile

Adjustable

Stands are shipped unassembled.

Low-profile stand fits under a desk or work area. Unit has a 7/8″ thick light gray particleboard top shelf with a plastic-laminate surface. Also has a fixed steel wire lower shelf. Frame is made of 16-ga. steel. Stand moves on four swivel (two with brake) casters with 2″ dia. nylon wheels.

Adjustable stand has top brackets that adjust from 24″ to 35″ wide and 6″ to 29″ deep to accommodate almost any printer. A wire rack on the bottom and wire basket in back hold the paper. Paper feeds from the front, back, or underneath and is caught underneath or in back. Rack and basket are made of steel wire; stand is 18- to 16-ga. steel. Color is light gray. Has four swivel casters (two with brake) with 2″ dia. polypropylene wheels.

	O'all Size, Wd.×Dp.×Ht.		Each

Computer Holders

Hanging

Mobile

Both are made of steel and shipped unassembled.

Hanging holder mounts horizontally or vertically and adjusts to fit your CPU with the turn of a knob. Horizontal mount adjusts from 13 1/8″ to 25 3/4″ wide and 5 1/8″ to 10″ high. Vertical mount adjusts from 5 1/2″ to 9 3/4″ wide and 13 1/8″ to 17 3/4″ high. Color is black. Mounting hardware is included.

Mobile holder rolls under your work surface. Loosen the set screws on the slide bars to adjust it from 6 1/2″ to 9 1/2″ wide. Has four swivel casters (two with brake) with 1 1/2″ dia. polyethylene wheels. Color is light gray.

		Each
Hanging	6231T1	$77.50
Mobile	6231T4	62.50

Computer Racks

Heavy Duty

Consolidate and organize your local area network (LAN) equipment in one location. These racks provide plenty of space for your monitors, modems, CPUs, printers, keyboards, and more. All consist of framing, adjustable shelves, and leveling feet. Shipped unassembled.

Standard Duty— Unit has five shelves made of 3/4″ thick particleboard with a light gray plastic-laminate surface. Base shelf is 24″ Wd.×29 1/2″ Dp.; all other shelves are 24 1/4″ Wd.×20″ Dp. Shelves adjust in 2″ increments, except base shelf is fixed. Frame is dark gray steel.

Heavy Duty— The floor shelf is freestanding, 18″ Wd.×21″ Dp., and made of steel. The work surface shelf is 24″ Wd.×30″ Dp. and made of 1″ thick particleboard with a light gray plastic-laminate surface. The top two shelves are 24″ Wd.×16″ Dp. and made of steel. All shelves adjust in 1″ increments. Unit also comes with a wire keyboard shelf that attaches to the shelves (mounting fasteners included). Frame and shelves are dark gray steel (except the work surface shelf).

Optional caster sets include four swivel casters (two with brake) with 3″ dia. wheels. *Standard duty* sets have polypropylene wheels. *Heavy duty* sets have rubber wheels.

Chair and Stool Accessories

Seat Cushions

Round

Rectangular

Cushions have foam padding.

Round cushion has a brown corduroy cover and an elastic strap on the bottom to hold the cushion to your stool.

Rectangular cushion is rattan on top with brown corduroy sides and bottom.

	Size		Each
Round	14″ Dia.×2″ Thick.	4841T11	$27.68
Rectangular	17 1/2″ Wd.×18″ Dp.×2″ Thick.	4841T13	32.94

Back Support

Support your back and reduce strain. Cushion has foam padding and a washable polyester cover. It also has a 26 1/2″ long adjustable strap for holding the cushion in place. Color is black.

Size, Wd.×Ht.×Thick.		Each
13″×12 5/8″×4″	46925T21	$36.53

Footrests

Polystyrene

Steel

Polystyrene footrest has three height positions with angle adjustment and nonskid pads on the bottom to keep it in place. Color is gray.

Steel footrest keeps your feet comfortable when you sit up high. The foot platform's height adjusts in 1″ increments by lifting it upward and sliding it to the desired position. A turn of a knob adjusts the tilt. Platform also has slip-resistant rubber matting on the top surface. Frame is steel. Color is black.

	Size, Wd.×Dp.	Ht. Range		Each
Polystyrene	18″×14″	4 1/4″-6 3/4″	45035T37	$56.23
Steel	18″×12″	3″-16″	38945T33	152.17

Folding Chairs

Chairs fold for easy storage. All have nonmarring plastic glides on the legs.

(A) Steel Chair— **To Order:** Please specify color: beige, black, or light blue.

(B&C) Steel Chairs with Padded Seat and Backrest— Seats and backrests have 1 1/4″ thick padding for comfort.

Style B has a vinyl seat and backrest for easy cleaning. **To Order:** Please specify color: beige (frame is beige), black (frame is black), or brown (frame is beige).

Style C has a fabric seat and backrest. **To Order:** Please specify color: beige (frame is beige), dark blue (frame is gray), or light gray (frame is gray).

(D) Chair with Polyethylene Seat and Backrest— Seat and backrest are made of impact- and stain-resistant contoured white polyethylene. Seat and backrest are 1 1/4″ thick. Frame is steel.

Air-Adjustable Chairs

A pneumatic adjustment lever allows you to raise and lower the seat, which swivels 360°. Base has five legs for added stability and five swivel casters with 2″ dia. wheels for mobility.

(A&B) Standard Chairs— All have a height-adjustable fabric backrest, fabric seat, and a black steel base. Wheels are polypropylene. **To Order:** Please specify color: black, dark blue, or light gray.

Style B also has black polyurethane arms that adjust horizontally and vertically.

(C) Multi-Adjustable Chair— The most versatile chair we offer. Fabric seat and backrest have angle adjustments so you can rock back and forth or lock in at a comfortable angle. It also has a tilt function, a height-adjustable backrest, and horizontal and vertical arm adjustment. Base is black steel, and arms are polyurethane. Wheels are nylon. **To Order:** Please specify color: black, dark blue, or dark gray.

(D) Mesh-Back Multi-Adjustable Chair— Has a unique mesh backing for breathability. It has a tilt function, tilt lock, height-adjustable backrest, and horizontal and vertical arm adjustment. Seat and backrest are fabric, and it has a black fiberglass-reinforced nylon base. Arms are polyurethane. Wheels are nylon. Color is black.

(E) Big-and-Tall Chair— Our highest capacity chair, it also has a larger seat and back. The chair has a tilt function and black reinforced nylon base. Wheels are nylon. **To Order:** Please specify color: black, dark blue, or light gray.

(F) High-Durability Chair— Seat and backrest are made of high-durability polyurethane that resists stains, grease, water, and chemicals. Backrest adjusts vertically and horizontally. Base is made of black reinforced nylon. Wheels are polypropylene. **To Order:** Please specify color: black, dark blue, or light gray.

(G) Chair with Leather Seat— Made of leather, seat is filled with memory foam that adapts to the contours of your body. The chair has a tilt function, tilt lock, and black polypropylene base. Arms are black polyurethane. Wheels are polypropylene. Color is black.

Sit/Stand Adjustable Stools

Air Adjustable

Manually Adjustable

Relieve foot and leg strain when working in a standing position—these stools allow you to rest most of your weight on the seat as you work. Each seat is made of black polyurethane.

Air-Adjustable Stools— A pneumatic lever under the seat raises and lowers the seat quickly and easily. Stools have five nylon glides and a seat that swivels 360° and tilts forward. Stool with *nylon* base is black. Stool with *aluminum* base meets standards for Class 10 clean rooms.

Manually Adjustable Close-Positioning Stool— The unique design allows you to get close to your work. Stool is made of steel. The seat is padded, swivels to the right and left, and tilts forward. Base is black and has four antislip rubber glides.

Base Material	Seat Ht. Adjust. Range	Seat Size, Wd. × Dp. × Thick.	Cap., lbs.	Base Size	Each

Mobile

A pneumatic adjustment lever quickly raises and lowers the seat (except Style F has a foot-operated adjustment). All seats swivel 360°.

(A) Steel Seat— All-steel construction is more durable and easier to clean than fabric. Color is light gray. *Stationary* stools have nickel-plated steel glides. *Mobile* stools have five swivel casters with 2″ dia. rubber wheels.

(B) Fabric Seat and Backrest— A padded fabric seat and backrest offer more comfort than Style A. Footrest is height adjustable and made of chrome-plated steel. Base is nylon. Color is black. *Stationary* stools have nylon glides. *Mobile* stools have five swivel casters with 2″ dia. polyurethane wheels. *Standard* stools have a backrest that adjusts vertically and horizontally. Stools *with tilt control* allow you to angle seat and backrest forward and backward. Backrest also adjusts vertically. **To Order:** Please specify fabric color: black or light gray.

(C) Vinyl Seat and Backrest— Seat and backrest have a padded vinyl surface that's easy to clean. Backrest adjusts vertically and horizontally. Footrest is height adjustable and made of chrome-plated steel. Base is nylon. Color is black. *Stationary* stools have nylon glides. *Mobile* stools have five swivel casters with 2″ dia. polyurethane wheels.

(D-F) Polyurethane Seat— Stools have a durable polyurethane seat that stands up to harsh environments. Base is made of steel, unless otherwise indicated. Color is black.

Style D has a black steel base. *Stationary* stools have plastic glides. *Mobile* stools have five swivel casters with 2″ dia. nylon wheels.

Style E have a lower divided storage tray with steel dividers to organize tools and supplies. Frame and lower shelf are steel. All have five swivel casters (two with brake) with 3″ dia. rubber wheels.

Style F offer hands-free height adjustment—footrest raises and lowers the seat. Base is cast aluminum with a black finish. *Stationary* stools have nylon glides. *Mobile* stools have five swivel casters with 1½″ dia. polyurethane wheels.

(G-J) Polyurethane Seat and Backrest— Stools have a seat and backrest made of polyurethane to withstand harsh conditions. Base is steel. *Stationary* stools have nylon glides, except Styles H and J have plastic glides. *Mobile* stools have five swivel casters with 2″ dia. nylon wheels, unless otherwise indicated.

Style G have a reinforced ABS plastic base and height-adjustable chrome-plated steel footrest. Color is black. *Mobile* stools have five swivel casters with 2¼″ dia. nylon wheels with rubber treads. *Standard* model has a backrest that adjusts horizontally and vertically. Model *with tilt control* has a tilt function and a backrest that adjusts vertically and horizontally.

Style H has two polyurethane footrests at different heights and a backrest that adjusts horizontally and vertically. **To Order:** Please specify seat/backrest color: black, dark blue, or dark gray.

Style J has three polyurethane footrests at different heights. Backrest has a tilt function and adjusts vertically. **To Order:** Please specify seat/backrest color: black, dark blue, or dark gray.

Wall-Mount Adjustable Stool

Mount this stool on the wall for a convenient, permanent place to sit. The leg has a rubber glide and contacts the floor when weight is applied. Use the pneumatic lever to adjust the height. Comes with a steel mounting bracket with two holes that accept ½″-13 bolts (not included). Once mounted, the entire stool swings from one side of the mounting bracket to the other. Projection from wall is 20¾″. Made of steel. Color is black.

Seat Ht. Adjust. Range	Seat Size, Dia. × Thick.	Cap., lbs.		Each
22¾″ to 28″	13″ × 1⅜″	350	9056T18	$349.50

Clean Room and Static-Control Air-Adjustable Stools

A Stationary | **B** Mobile | **C** Stationary | **D** Mobile | **E** Mobile | **F** Stationary

Choose from stools that meet clean room requirements or are perfect for static-control applications. A pneumatic adjustment lever under the seat quickly raises and lowers the seat. Seats swivel 360°.

Style A— Chrome-plated, all-steel construction is more durable and easier to clean than fabric. *Stationary* stools have nickel-plated steel glides. *Mobile* stools have five swivel casters with 2″ dia. polyurethane wheels. Color is light gray.

Style B— Seat and backrest have a padded vinyl surface that's comfortable and easy to clean. Footrest is height adjustable and made of chrome-plated steel. Backrest adjusts vertically and horizontally. Base is nylon. Color is black. *Stationary* stools have nylon glides. *Mobile* stools have five swivel casters with 2″ dia. polyurethane wheels.

Style C— Stools have a polyurethane seat and backrest to withstand harsh conditions, and a chrome-plated steel footrest. Seat and backrest have a tilt function, and the backrest also adjusts vertically. Base is reinforced nylon. Color is black. *Stationary* stools have plastic glides. *Mobile* stools have five swivel casters with 2″ dia. polypropylene wheels.

Style D— Seat and backrest have a padded vinyl surface that's comfortable and easy to clean. It has a chrome-plated steel footrest and a brass drag chain that acts as a ground. Backrest adjusts vertically and horizontally. Color is black. *Stationary* stools have nickel-plated steel glides. *Mobile* stools have five swivel casters with 2″ dia. rubber wheels.

Style E— A padded fabric seat and backrest offer more comfort than unpadded stools. Footrest is height adjustable and made of chrome-plated steel. A brass drag chain acts as a ground. *Stationary* stools have nylon glides. *Mobile* stools have five swivel casters with 2″ dia. polyurethane wheels. Base is polished aluminum.

To Order: Please specify fabric color: black or light gray.

Style F— Stools have a seat and backrest made of polyurethane to withstand harsh conditions. Base is polished aluminum. All components are conductive and a brass drag chain acts as a ground. *Stationary* stools have plastic glides. *Mobile* stools have five swivel casters with 2″ dia. polypropylene wheels.

Creepers

G | **H** | **J** | **K** | **L**

Creepers allow you to work below low-clearance material and equipment. All have swivel casters plus headrests to keep you comfortable.

(G) Economy— Made of polypropylene.

(H) Padded— Creeper has an MDF (medium density fiberboard) platform that's padded for extra comfort and covered with vinyl. Frame is steel.

(J) Padded with Adjustable Headrest— Same as Style H, but with a three-position adjustable headrest.

(K) Chemical Resistant— Made of polyethylene to resist most solvents, grease, and fuel. It has a padded vinyl headrest plus raised sides to support your body.

(L) Rough Duty— Featuring large 5 1/8″ dia. wheels, this creeper rolls easily over cracks, extension cords, drains, and other obstacles. It is specially designed to cradle your body for support. Made of polypropylene.

Equipment Seats

Replace worn-out seats on equipment such as forklifts. All seats are black and have foam padding. Overall capacity is 250 lbs. Seat frames are steel and have four 5/16″ dia. threaded studs for mounting to your equipment. Seats come with a seat belt mounting bracket, unless noted.

Note: Seats are not intended for highway-use vehicles.

(A-G) Seats Designed for Specific Manufacturers' Equipment

Seats can also be used in other equipment that has the same center-to-center width mounting stud pattern. Seats adjust front to back.

Style B—Back cushion folds down onto the seat.

(H-P) Adjustable-Mount Seats

All seats have multiple center-to-center width mounting stud patterns for greater mounting flexibility. Seats adjust front to back.

Style H—Back cushion folds down onto the seat.

Style L—Seat is waterproof.

Style M—Seat has a fabric cover that stays cooler than vinyl. Seat is tear resistant. For indoor use.

Style N—Designed to isolate and reduce vibration with a trampoline-style sling instead of a hardboard metal pan under the seat.

Style P—A 1″ high adjustable suspension creates a smoother ride. Has the same construction and vibration control features as Style N.

(Q) Seat with Suspension for Larger Equipment

This seat provides a comfortable ride for operators of larger equipment. Suspension is 9½″ high and flexes to absorb shock and vibration. Height adjusts 3″ in 1″ increments. The angle of the seat back is adjustable, and seat adjusts front to back.

Retractable

Retractable with Switch

Seat Belt Mounting Bar

Add a seat belt to your equipment seat for a safer ride. All are lap style, have a push-button release, and come with mounting fasteners (unless otherwise indicated) to secure the belt to your seat.

Standard—Buckle the belt and pull the strap to tighten.

Continuous—Also known as an endless belt, this belt wraps completely around your seat. Buckle the belt and pull the strap to tighten. No need for mounting hardware.

Retractable—Retracts automatically when buckled.

Retractable with Switch—Similar to the retractable belt above, but your vehicle won't operate unless the belt is buckled. Includes a standard automotive plug that you can cut off to expose two wire leads.

Seat Belt Mounting Bar—Allows equipment seats that do not have a seat belt mounting bracket to accept seat belts. It accommodates seats up to 21″ wide and has two ½″ dia. end holes and six ⅜″x11¼″ slotted holes for 11″, 13″, or 14½″ wide center-to-center mounting patterns. Made of steel. Mounting fasteners not included.

Benches

A

B

C

D With Adjustable Feet

E

F

Benches are shipped unassembled, except Style A.

(A) Fold-away indoor benches have legs that fold up and out of the way for easy transport and convenient storage. Legs have nonmarring plastic feet. Frame and legs are made of steel and are brown. Top is particleboard with a walnut plastic-laminate surface.

(B) High-capacity indoor benches have cast iron legs, and each leg has a 4″ Wd.×10″ Dp. base with four slots that accept 3/8″ dia. bolts for floor mounting (fasteners not included). Legs have a dark green finish. Top is laminated maple.

(C) Damage-resistant indoor benches have a white polyethylene top that resists scratches, dents, moisture, and chemicals. Legs are made of black anodized aluminum and have a 6″ dia. flanged base with four holes per flange for floor mounting (fasteners included).

(D) Corrosion-resistant indoor benches are made of Type 304 stainless steel for great corrosion resistance and meet standards for use in Class 100 clean rooms. Benches are freestanding and have legs that are curved for extra stability.

Benches *with adjustable feet* have 1″ dia. feet that compensate for uneven floors.

Benches *with adjustable flanged feet* have 3 1/2″ dia. leveling flanges to compensate for uneven floors. Each flange has two 3/8″ dia. holes for floor mounting (fasteners not included).

(E) Lightweight aluminum indoor/outdoor benches are made of anodized aluminum and are durable and corrosion resistant. Each leg has a 2 1/4″ Wd.×12″ Dp. base and comes with rubber feet for free-standing applications and concrete anchors for floor mounting. Top has a skid-resistant surface.

(F) Recycled-plastic indoor/outdoor benches are the environmentally friendly choice. They resist most chemicals, rot, splintering, and damage from UV radiation. Each leg has two Type 304 stainless steel tabs with a 7/16″ dia. mounting hole (fasteners not included). **To Order:** Please specify color: brown or light gray.

Benches with Backrest

Wood

Recycled Plastic

Give your back a rest—these freestanding benches have a backrest for more comfortable seating than benches without a backrest. Rated for indoor/outdoor use and shipped unassembled.

Wood benches are made of pine slats that are protected with a weather-resistant dark green coating. Frame is steel; color is black. Each leg has two oval mounting holes (fasteners included).

Recycled-plastic benches are environmentally friendly, heavy duty, and maintenance free. They resist most chemicals, rot, splintering, and damage from UV radiation. **To Order:** Please specify color: brown or light gray.

120″×9 1/2″	**4911T46**	205.02

Pedestal Bench Leg

Leg is 2 3/16″ Dia.×16 1/4″ Ht. and has a 8 1/4″ dia. flange on the top and the bottom. Each flange has three mounting holes (fasteners included). Capacity per pair of legs is 1,800 lbs. For indoor use. Made of steel. **To Order:** Please specify color: dark gray, light blue, or tan.

Note: For benches up to 96″ wide, use two legs. For benches wider than 96″, use three legs.

9085T3 ..... **Each** $34.93

Fold-Away Bench Leg

Two Fold-Away Bench Legs

Leg folds flat against bench for easy transport and storage. Each leg is 16 3/4″ high with a 9″ deep top and a 15 3/4″ deep base. There are eight holes to mount leg to the bench top (fasteners included). For indoor and outdoor use. Capacity per leg is 250 lbs. Made of steel.

Note: For benches up to 72″ wide, use two legs. For benches wider than 72″, use three legs.

4958T12 ..... **Each** $13.99

Basketball Equipment

Outdoor basketball set includes a backboard, mounting post, rim, and nylon net. Backboard is aluminum with a white finish. It's maintenance free and measures 35″ Ht.×54″ Wd. Mounting post is one-piece, zinc-coated steel pipe that's 12 feet long with a 3-ft. extension at the top. Rim is steel with an orange finish.

Basketball court stencils allow you to create an official half court. Come with instructions, stencils, and paint roller. Masking tape and approximately 1 qt. of paint are required (tape and paint not included).

		Each
Outdoor Basketball Set	**45425T12**	$750.47
Basketball (Indoor/Outdoor)	**45425T23**	22.22
Basketball Court Stencils	**45425T33**	41.64

Vertical File Cabinets

All cabinets include a single lock that locks all drawers. Lock includes two keys.

(A) Standard cabinets have welded-steel construction. Each drawer has a thumb latch, pull handle, label holder, and an adjustable plate that slides forward and backward to keep papers organized. Shipped assembled. **To Order:** Please specify color: beige, black, or light gray.

(B) Fire- and water-resistant cabinets protect important files from fire. All meet UL Class 350 requirements to maintain an interior temperature of 350° F or less after being subjected to 1700° F for one hour. Each drawer has a pull handle and label holder. Made of steel. Color is beige. Shipped assembled.

(C) Mobile cabinets have four casters (two rigid and two swivel) with 1¾″ dia. nylon wheels that are concealed under the cabinet. They also have file drawers with high sides that accommodate letter-size hanging files without the need for hanging-file frames. Made of steel. Shipped assembled. **To Order:** Please specify color: beige or black.

(D) Easy-access mobile cabinet has two slide-back tops that allow partial or full access to all your files. Tops store conveniently on the sides of the cabinet when open. Cabinet has a removable 13⅝″ Wd.×28¼″ Dp.×1½″ Ht. lower wire shelf and four swivel casters with 3″ dia. plastic wheels. Made of steel. Shipped unassembled. Color is matte gray.

Optional front-to-back hanging-file frames (not shown) support hanging-file folders (not included, see page 1988) in most vertical file cabinets. Frames adjust from 24″ to 27″ deep in ½″ increments. Made of steel. Shipped unassembled.

● Also has two smaller storage drawers: both are 11 15/16″ Wd.×17¾″ Dp.×4⅝″ Ht.

Lateral File Cabinets

Wide instead of deep, these cabinets are excellent for use in narrow aisles. Use them to hold both letter- and legal-size files. You can store your files side-to-side with the included hanging-file frames or front-to-back when you choose the optional front-to-back hanging-file frames (sold separately below). All cabinets include a single lock that locks all drawers, and comes with two keys. Drawers also have a safety interlock system that allows you to open only one drawer at a time. Each drawer has a recessed pull handle, label holder, and slotted bottom to accommodate optional dividers. Leveling glides adjust to compensate for uneven floors. Made of steel. Shipped assembled. **To Order:** Please specify color: beige, black, or light gray.

Two-drawer cabinets have counterweights to prevent tipping. ***Five-drawer cabinets*** have a top opening that has a retractable door and roll-out shelf for easy access to frequently used files.

Flat-Document File Cabinets

Five-Drawer Cabinet with Optional Open Base

Eight-Drawer Cabinet with Optional Closed Base

Store blueprints, CAD drawings, maps, and other large flat documents in these cabinets with low-height drawers. Same-size cabinets are stackable so you can create a filing system that's just right for your needs. All have a front paper depressor to keep documents from curling. Shipped assembled, unless otherwise indicated.

Cabinets with Four and ***Eight Drawers***—Each drawer has two steel handles. Four-drawer cabinets can be stacked five high while eight-drawer cabinets can be stacked two high. Made of steel. Shipped unassembled. **To Order:** Please specify color: dark gray or tan.

Optional closed bases measure 6″ high and are recessed 2½″ from cabinet fronts. Made of steel.

Cabinets with Five Drawers—Each drawer has two chrome-plated steel handles and a label holder. Cabinets can be stacked up to five high (two high when using the optional open bases). Made of steel. **To Order:** Please specify color: light gray or tan.

Optional closed bases measure 6″ high and are recessed 2¾″ from cabinet fronts for toe space. Made of steel.

Optional open bases offer convenient storage space. They're steel and raise the cabinets 20″ off the floor. Shipped unassembled.

Optional lock kit includes a lock and two keys; this single lock will lock all drawers in the cabinet.

Rolled-Document File Cabinets

Stackable Cabinets Stacked Two High, 16 Openings

Mobile Wire Cabinet

Mobile Laminated Cabinet, 50 Openings

Slotted openings make it easy to store blueprints, charts, and other rolled materials.

Stackable Cabinets

You can use these cabinets side-by-side as well as stacked up to four high. Made of steel, they have fiberboard shelving and dividers that are reinforced with aluminum molding. They also have a reversible hinged door with knob, magnetic closure, and an index grid on the inside for easy document identification. Color is tan. Shipped assembled.

Safes

Standard Safe

Fire- and Water-Resistant Safe

Fire- and Water-Resistant Media Safe

Safeguard important documents and other valuables. Shipped assembled.

Standard Safe—Made of steel, this safe has an electronic keypad lock with backup key. It also has a removable shelf and can be mounted to the floor or a shelf (mounting hardware included). Color is dark gray.

Fire- and Water-Resistant Safes—Made of insulated, double-walled steel, these safes meet UL Class 350 requirements to maintain an interior temperature of 350° F or less after being subjected to 1700° F for one hour. All include a dual lock system with an electronic keypad and key. To open, enter your security code into the keypad and turn the door key. If battery is low on the keypad, safes can be opened by turning the door key and the emergency key simultaneously. Three each of the door, emergency, and drawer keys (where applicable) are included. Safes also have one shelf that adjusts on ½″ centers. 6483T51 has a 12″ Wd.×12″ Dp.×1¾″ Ht. plastic tray. 6483T53 has a 13″ Wd.×12″ Dp.×3½″ Ht. lockable metal drawer. 6483T55 has a 14″ Wd.×12¾″ Dp.×3½″ Ht. lockable metal drawer. Color is gray.

Fire- and Water-Resistant Media Safe—With its insulated, double-walled polyethylene shell, this safe meets UL Class 125 requirements to maintain an interior temperature of 125° F or less after being subjected to 1700° F for one hour. Perfect for storing CDs, diskettes, and removable drives. Comes with a lock and two keys. Color is beige.

Hanging Document Storage Systems

Unlike flat- and rolled-document cabinets, these hanging file systems have an open design for quick access to your blueprints, charts, CAD drawings, and other large documents. Made of steel. Color is tan. Shipped unassembled.

To create a hanging document storage system, order ***hanging document brackets (A-D)*** and the number of ***document clamps*** you need (sold separately below). Document clamps are required to hold your documents.

(A&B) Wall Mount— Save valuable floor space by bolting these brackets directly to your wall (mounting fasteners included). Brackets extend from the wall, and the maximum document length depends on how high you mount the brackets. Document clamps sold separately below.

Style A comes with two brackets.

Style B has 12 swing-open pivoting brackets, making it easy to leaf through files and find what you need. You can use any combination of the document clamp widths (sold separately below).

(C&D) Mobile— Come with four swivel casters (two with brake).

Style C has an adjustable width and 2″ dia. nylon wheels. Maximum document length is 50″. Document clamps sold separately below.

Style D has 12 swing-open pivoting brackets, making it easy to leaf through files and find what you need. The file stand has an adjustable depth and height, and it has 3″ dia. rubber wheels. Maximum document length is 60″. You can use any combination of the document clamp widths (sold separately below).

9 Compartment

72 Compartment

Modular Stackable Organizer

Combine sorters, riser, and a table (all sold separately below) to design your own organizer. Since no fasteners are needed, changing your configuration is a breeze. Color is light gray. Shipped unassembled.

Sorter includes 20 removable compartment trays that measure 11″ wide and adjust in ⅞″ increments. Compartment trays have finger cut-outs, label holders, and form up to 25 compartments. Additional compartment trays are sold separately below. Sorter is made of steel, and compartment trays are made of gray plastic. *Note:* Sorter can stack up to three high when not using a riser and two high when using a riser.

Riser supports up to two sorters and comes with two openings for routing wires. Made of steel.

Table has a capacity of 500 lbs. and legs that adjust from 28″-36″ in 1″ increments. The shelf has a clearance of 14″ and 150-lb. capacity. Made of steel with a particleboard top with a light gray laminate surface.

	O'all Size, Wd. × Dp. × Ht.		Each
Sorter	57½″ × 13″ × 14¼″	**5151T13**	$329.19

Table	60″ × 30″ × 29⅛″-37⅛″	**5151T11**	690.14

Additional Compartment Trays for Sorter (5/Pkg.) **5151T14** **Per Pkg.** $42.91

Display Racks

A
9 Pockets

B
11 Pockets

C
44 Pockets

Display and organize magazines, forms, and other papers. **To Order:** Where applicable, please specify color.

(A) Clear-View Plastic Wall-Mount Racks— Made of clear PET, these racks allow you to view contents from any angle. Mounting fasteners included. Shipped assembled.

(B) Steel Wall-Mount Racks— Come with two 3/8″ keyhole slots for wall mounting (mounting fasteners not included). All have contoured pockets to allow literature to lean forward to prevent paper curl, unless noted. Made of welded steel. Shipped assembled.

(C) Steel Revolving Floor Racks— These four-sided racks allow you to store large amounts of literature in one compact space. They provide the largest number of pockets and rotate 360° on a turntable so you can easily access rack contents. Pockets are contoured, allowing literature to lean forward to prevent paper curl. Made of steel. Shipped unassembled.

Fabric Partitions

Straight Connector

Corner Connector

Wall Bracket

Freestanding Panel

Transform your open space into efficient, customized workspaces. All panels are 60″ Ht. × 1″ Thick. and have a welded-steel frame with MDF (medium-density fiberboard) core. Color is light gray.

Wall Panels and Accessories— Create workspaces by connecting wall panels with connectors (sold separately). Wall panels are easy to install, can be reconfigured, and have adjustable leveling feet. Rows of wall panels must be supported every 6 to 8 feet with a wall bracket (sold separately) or with another wall panel set at 90°.

Wall brackets attach a wall panel to an existing wall. Two brackets are included: one for the panel top and one for the bottom. Each bracket has four 1/4″ dia. mounting holes (fasteners not included).

Bookshelves are steel with a light gray finish. They hang anywhere on wall panels with the included shelf brackets. *Note:* Bookshelves must match width of panel.

To design your own panel system: 1. Make a rough drawing of the area you wish to partition, along with the overall measurements. 2. Determine the height, width, and number of panels you'll need. 3. Order the appropriate number and style of connectors you'll need to join the panels. To create a three-way connection, use two pairs of corner connectors; to create a four-way connection, use three pairs of corner connectors. 4. Order wall brackets when necessary. 5. Order bookshelves, if desired.

Freestanding Panels— Perfect for quick setup of temporary offices or meeting rooms. There's nothing to install—simply set them up. All have two dark gray T-leg bases.

Coat Racks

Space Saver

Stationary Single Sided

Mobile Double Sided with Optional Boot Shelf

Space-Saver Coat Rack

This rack takes up very little floor space. It has four double hanging hooks, a 21″ dia. base, and four legs with adjustable nylon leveling feet to compensate for uneven floors. Overall height is 70″. Made of steel. **To Order:** Please specify color: chrome plated or black.

4708T21 ..... **Each** $75.20

Single- and Double-Sided Coat Racks

Place these racks anywhere to keep belongings neat and organized. For hangers (not included), see page 1674. Shipped unassembled.

Steel Racks— **To Order:** Please specify color: chrome plated or dark gray.

Stainless Steel Racks— Made of Type 304 stainless steel for excellent corrosion resistance, they're great for clean rooms.

Single-sided racks have a single hanger bar. ***Double-sided racks*** have three hanger bars for greater storage capacity.

Mobile racks have four swivel casters (two with brake) with 3″ dia. rubber wheels.

Bicycle Racks

D

E

F

G

Our racks offer convenient parking and storage for bicycles. All except Style F accommodate bicycles on both sides of the rack. Racks mount to any flat surface.

(D) Corrosion Resistant— Rack is made of one-piece polyethylene to resist rot and rust. Each wheel slot has a zinc-plated security bar for securing your bike to the rack. Color is light gray. Mounting hardware included. Shipped assembled.

(E) Contemporary Style— A continuous loop of steel pipe gives this rack a modern look. Each loop and each end holds one bicycle. Each leg has a 5″ dia. flange that has three 7/16″ dia. mounting holes. Mounting hardware not included. Color is light gray. Shipped assembled.

(F) Slotted Style— The slots in this rack provide the most room between bicycles. Rack has two steel bases and steel wheel slots. Each steel base has five ½″ dia. mounting holes. Mounting hardware not included. Shipped unassembled.

(G) Large Capacity— Made of galvanized steel. Each leg has a 4 11/16″ dia. malleable-iron flange with two 15/32″ dia. mounting holes. Mounting hardware not included. Shipped unassembled.

Wide-Mouth Plastic Jars

E F G H J

Extremely wide mouths on these jars make filling and dispensing a breeze. Jars are rigid plastic with straight sides and come with threaded caps. All caps are white polypropylene, unless otherwise indicated.

(E) Autoclavable translucent polypropylene jars have a maximum temperature of 249° F.

(F) Autoclavable clear polycarbonate jars have a maximum temperature of 275° F.

(G) Heavy duty translucent polyethylene jars have extra-thick walls, making them our most durable plastic jars. They are made of low-density polyethylene and FDA-compliant resins. Cap is translucent low-density polyethylene and has an inner leakproof seal. Maximum temperature is 176° F.

(H) Clear polystyrene jars have a maximum temperature of 158° F.

(J) Super-clean clear PET jar is pre-cleaned and virtually particle-free. Cap has a polyethylene foam lining. Not temperature rated.

Wide-Mouth Glass Jars

Glass jars protect contents from chemicals, oils, and gases. All are clear and have a threaded cap.

(A) Jars with black phenolic cap are best for general purpose use. *Foam-backed PTFE liners* provide a tight seal to resist attack from a variety of chemicals. Not temperature rated.

(B) Mason jars with tin-plated cap have a cap that allows gases to escape during heating and forms a vacuum seal during cooling. Leakproof when vacuum sealed. Max. temperature is 240° F.

Cans with Friction-Top Lids

Tin-Plated Steel with Handle

Polypropylene with Handle and Optional Lid-Securing Clips

Optional Lid-Securing Plastic Ring

Also known as paint cans.

Tin-Plated Steel Cans— All are leakproof and have a bright finish.

Polypropylene Cans— Made of 100% recycled plastic, these cans have a tin-plated steel rim and lid with a varnish coating on both the inside and outside for corrosion resistance. They are also leakproof and dent resistant. Color is black.

Lid-Securing Steel Clips for All Cans— For added security, use these clips to keep your lids closed. Clips are for one-time use.

Lid-Securing Plastic Rings for Steel Cans— For an even tighter lock on your lid, these rings fit around the entire can. Rings are for one-time use. *Note:* Rings only fit steel cans; not for use with plastic cans.

Wide-Mouth Rectangular and Square Plastic Bottles

C

D

E&F

G

Rectangular and square bottles take up less storage space than their round counterparts. All are made of rigid plastic and come with a threaded cap.

(C&D) Translucent high-density polyethylene bottles are leakproof. Cap is translucent polypropylene. Max. temperature is 248° F.

(E) Easy-grip translucent high-density polyethylene bottle is leakproof and has hand grips. Cap is white polypropylene. Max. temperature is 248° F.

(F) Easy-grip autoclavable translucent polypropylene bottle has hand grips. Cap is white polypropylene. Max. temperature is 275° F.

(G) Clear PVC bottles have a black phenolic cap with pulp/vinyl seal. Max. temperature is 176° F.

Wide-Mouth Plastic Bottles

Having a big mouth can be a good thing—the wide mouth on these bottles makes filling and dispensing quick and easy. All bottles have a threaded cap.

(A) Flexible and translucent low-density polyethylene bottles are leakproof and made of FDA-compliant resins. Cap is translucent polypropylene. Max. temperature is 176° F.

(B-D) Translucent high-density polyethylene bottles come in three styles. *Style B* is rigid, leakproof, and made of FDA-compliant resins. The cap is translucent polypropylene. Max. temperature is 248° F. *Style C* is rigid. Cap is white polypropylene (except 42955T4, which has a metal cap). Max. temperature is 230° F. *Style D* is flexible and octagonal in shape. Cap is translucent high-density polyethylene. Max. temperature is 212° F.

(E) Autoclavable translucent polypropylene bottles are rigid, leakproof, and made of FDA-compliant resins. Cap is translucent polypropylene. Max. temperature is 275° F.

(F) Heavy duty autoclavable translucent polypropylene bottles are rigid, leakproof, and have thick walls for durability. Cap is translucent polypropylene and has a standard mason-jar thread with removable seal. Max. temperature is 250° F.

(G) Clear polycarbonate bottles are rigid, leakproof, and stain resistant. The sides are indented for a secure grip. Cap is black polypropylene with a Buna-N seal. Max. temperature is 225° F.

Easy-to-Pour Wide-Mouth Plastic Bottles

1 gal. with Internal Spout

With an easy-to-grab handle, wide mouth, and twist-off cap, these leakproof bottles are easy to pour and reseal. The 1-gal. bottle offers even more controlled pouring thanks to an internal spout. Bottles are rigid and made of high-density polyethylene. Color is light gray with dark gray caps. Max. temperature is 180° F.

Capacity	Mouth OD	O'all Base Size	O'all Ht.		Each
32 oz./1,000 ml	89 mm	4" × 4 3/4"	5 1/4"	6917T11	$5.43
1 gal./4,000 ml	152 mm	6 3/4" sq.	8"	6917T12	10.26

Narrow-Mouth Plastic Bottles

Round *Square*

Narrow mouths offer more controlled pouring. All bottles have a threaded cap.

Flexible and translucent low-density polyethylene bottles are leakproof and made of FDA-compliant resins. Caps are white polypropylene. Max. temperature is 176° F.

Heavy duty translucent low-density polyethylene bottles have rigid, thick walls for durability. Caps are translucent polyethylene. Max. temperature is 176° F.

Translucent high-density polyethylene bottles are rigid and leakproof. Caps are translucent polypropylene. Max. temperature is 248° F. *Round models* are made of FDA-compliant resins.

Autoclavable translucent polypropylene bottles are flexible, leakproof, and made of FDA-compliant resins. Max. temperature is 275° F.

Extreme duty autoclavable translucent FEP bottles resist virtually all chemicals and are excellent for high and low temperature applications. Bottles are flexible and leakproof. Cap is translucent ETFE. Max. temperature is 302° F.

Autoclavable clear polycarbonate bottles are rigid, leakproof, and made of FDA-compliant resins. Caps are white polypropylene. Max. temperature is 275° F.

Glass Bottles

There's no need to worry about contaminating contents—these clear glass bottles protect them from chemicals, oils, and gases. All are furnished with a black threaded phenolic cap with a PTFE seal.

Safety-Coated Glass Bottles

Accidents happen, but disasters don't have to when you use these bottles. If one of these bottles breaks, the clear safety coating keeps the glass and contents contained long enough for you to safely dispose of them. They are also slip resistant and impact resistant, leading to fewer broken bottles.

All bottles are clear and have a green melamine threaded cap with a PTFE seal.

UN-Compliant Plastic Shipping Bottles

Designed to resist splitting and puncturing, these heavy duty bottles are perfect for shipping hazardous materials. They are UN-compliant and have the IP2 marking molded into the bottom. All are flexible, leakproof, and made of translucent high-density polyethylene. Cap is threaded translucent polypropylene. Max. temperature is 248° F.

Amber Bottles for Light-Sensitive Products

All have a threaded cap.

High-density polyethylene bottles have an amber polypropylene cap. Max. temperature is 248° F.

Glass bottles have a black phenolic cap with a PTFE seal.

Safety-coated glass bottles have a safety coating that keeps glass and contents contained if bottle breaks, and have a green melamine cap with a PTFE seal.

Plastic Bottles with Protective Coating

Both interior and exterior surfaces are fluorinated to prevent content loss due to permeation. Made of translucent high-density polyethylene, bottles are flexible, leakproof, and resist splitting and puncturing. Cap is threaded translucent polypropylene (except 41165T31 which is threaded white polypropylene). Max. temperature is 248° F.

Tamper-Evident Plastic Bottles

You will always know when these bottles have been opened due to their tamper-evident cap. The cap comes with an attached ring, and the cap becomes tamper-evident once it is threaded onto the bottle. Opening the bottle breaks the ring off the cap but still allows for threaded closure.

Bottles have a wide mouth and are flexible, leakproof, and made of translucent high-density polyethylene. Caps are blue polypropylene. Max. temperature is 212° F.

Capacity oz.	Capacity ml	Mouth OD	O'all Base Size	O'all Ht.		Each

Graduated Bottles

A

B

C

D

E

F

Graduation marks help you accurately measure and dispense liquid contents. Wide mouths make these bottles easy to fill as well. All bottles come with a threaded cap.

(A) Flexible and translucent low-density polyethylene bottles are leakproof. Caps are white high-density polypropylene and have a hole in them for attaching a tag. Max. temperature is 176° F.

(B) Translucent high-density polyethylene bottles are rigid and leakproof. Caps are white polypropylene and have a hole for attaching a tag. Max. temperature is 248° F.

(C&D) Autoclavable translucent polypropylene bottles are flexible. The caps are white polypropylene and have a flip top for quick access. Max. temperature is 212° F.

(E) Autoclavable translucent polypropylene bottles with write-on area have a white area for writing with a marker (not included). The bottles are rigid and leakproof. Caps are white polypropylene. Max. temperature is 275° F.

(F) Clear glass bottles have black phenolic caps with a PTFE seal (except 42235T57, which has a green melamine cap). Not temperature rated.

Plastic Graduated Cylinders

G

H

J

K

All cylinders are autoclavable and have a pour spout. *Styles G* and *K* meet ISO 6706 standards and DIN 12680 TT, Class B tolerances.

(G&H) Translucent polypropylene cylinders have two styles. *Style G* has a max. temperature of 275° F. *Style H* has a grip handle for steady pouring and a dual scale that reads from top down and from bottom up. Max. temperature is 248° F.

(J) High-stability translucent polypropylene cylinders are more stout than other cylinders; they offer more stability and require less vertical storage space. Base has a drainage hole to prevent suction to wet surfaces. Max. temp. is 275° F.

(K) Clear polymethylpentene cylinders have a max. temperature of 275° F.

Plastic Graduated Beakers

A B C D E F G H J

(A) Clear polystyrene beaker has a triangular shape that makes pouring easy. Beaker also has an area for labeling. Max. temperature is not rated.

(B) Autoclavable translucent polypropylene beakers have a pour spout and ribs for stacking. Meet ISO/DIS 7056. Max. temperature is 275° F.

(C) Autoclavable clear polymethylpentene beakers have a pour spout and ribs for stacking. Meet ISO/DIS 7056. Max. temperature is 293° F.

(D&E) Autoclavable translucent polypropylene beakers with handle come in two styles. *Style D* is rectangular and has graduations on three sides. Not temperature rated. *Style E* has a pour spout and a max. temperature of 275° F (except for 9896T4, which is 248° F.)

(F) Autoclavable clear polymethylpentene beakers with handle have a pour spout and a max. temperature of 293° F. *Style H* has a pour spout.

(J) Easy-to-read FDA-compliant clear polycarbonate beakers with handle can be read from the side as well as from the top while pouring. They have a soft black nonslip handle for a better grip. Max. temperature is 194° F.

Measuring Pipettes

With Suction Bulb

With Pipette Pump

Whether you prefer tradition or technology, both the suction bulb and pipette pump come with a pipette and allow you to transfer precise amounts of liquid.

Pipette ***with suction bulb*** favors the traditional two-handed measuring method. Bulb is vinyl and 4″ long.

Pipette ***with pipette pump*** is designed for single-hand use. It is polypropylene and 7¼″ long.

Cap., ml	Grads., ml	Pipette Lg.	*With Suction Bulb* Each	*With Pipette Pump* Each

Burettes

When you need exact measurements, try a burette instead of a pipette. Burettes have a stopcock that allow you to release a more precise amount of liquid—either in drops or a stream. Both are made of clear glass and have 0.1 ml graduations. They come with a flexible, translucent polyethylene reservoir and a removable white plastic base.

Test Tubes

Use these test tubes to transport, store, mix, and sample small amounts of liquids and powders.

Plastic test tubes are made of FDA-compliant resins. Choose from *polypropylene,* which are translucent, autoclavable, and have a max. temperature of 275° F and *polystyrene,* which are clear and have a max. temperature of 158° F. *Graduated test tubes* are labeled every 1 ml.

Glass test tubes are clear, autoclavable, and chemical resistant. Max. temperature is 950° F.

Optional caps have a max. temperature of 176° F. Caps for plastic test tubes are white polypropylene (except 6946A18, which is clear low-density polyethylene, and 6946A21, which is translucent polypropylene). Caps for glass test tubes are translucent low-density polyethylene.

Jugs

All jugs come with a threaded cap.

(A&B) High-density polyethylene jugs with handle have a white polypropylene cap with foam seal. Not temperature rated. *Style A* is leakproof.

(C) Heavy duty low-density polyethylene jug with handle is leakproof. Cap is white low-density polyethylene. Max. temperature is 176° F.

(D&E) Glass jugs with finger ring have black phenolic caps with a PTFE seal. Not temperature rated. *Style E* is amber colored to protect contents that are sensitive to light and UV rays.

(F) Tin-plated steel jugs with and without handle have a cap that is tin-plated steel with a vinyl-coated pulp seal. Not temperature rated.

Carboys

Carboys boast greater storage capacity than jugs. *Style A* are made of FDA-compliant resins and have bottom hand grips for easy pouring. *Carboys with pouring spout* offer less splash and better control when pouring. *Style F* have bottom hand grips for easy pouring and a tether to keep the cap attached to the carboy. *Style G* have a spout that can be stored inside the container to save space.

★ Has a polypropylene cap.

Carboys with Faucets

You don't need to lift these carboys to dispense their contents—just turn on the faucet. *Style N* can be compressed as liquid is dispensed to save space. Easy to store when not in use.

Pitchers

(A) Graduated low-density polyethylene pitchers have a 3/8″ OD detachable flexible spout that is 13 1/2″ long (unless noted). 9899T11 has 1/4 qt. and 1 liter graduations. 9899T12 has 1/2 qt. and 1 liter graduations. 9899T15 has 1 qt. and 1 liter graduations. Color is translucent.

(B) Large capacity high-density polyethylene pitcher has a long rigid spout for pouring in hard to reach areas. Color is black.

(C-E) Galvanized steel pitchers are galvanized for strength and corrosion resistance. *Style C* has a wide pouring lip with tapered neck to limit spills. *Style D* comes with a fixed spout. *Style E* has a flexible spout.

(F) Large capacity galvanized steel pitcher has a rigid spout and handle on the side and top. Partially enclosed top limits spills.

(G) Graduated steel pitchers with flow control have a flexible spout, recessed bottom for complete draining, enclosed top to limit spills, and a thumb-operated flow control that can be locked in the open position for easy pouring. All have 1 qt. and 1 liter graduations. Color is black.

(H) NSF-certified aluminum pitchers are seamless, anodized aluminum, and have a lip around the top.

♦ Spout is 11″ long.

Contaminant-Resistant Dispensing System

Buna-N seals in the lids and spouts provide a contaminant-resistant way to transport, store, and dispense fluid. And being flexible is easy with this system—containers and lids are fully interchangeable so you can create an arrangement that is perfect for your needs. The system is antistatic, UV resistant, and made of high-density polyethylene. Max. temperature is 176° F. *Note:* Not for use with fuels or solvents.

Containers— Have quart and liter graduations. Color is translucent.

Lids— Come in a choice of five colors so you can color-code your containers. *Small-*, *medium-*, and *large-spout lids* have a twist-to-open spout and push-button air valve. **To Order:** Please specify lid color: black, blue, green, red, or yellow.

Optional Accessories— *Spout extenders* provide more controlled pouring. *Pump* for *lid with screw cap* (5199T58) discharges approximately 1 qt. per 14 downstrokes. It comes with a curved, antidrip 1/2″ OD nozzle and 59″ long hose. *Reducer nozzle* changes the pump OD from 1/2″ to 3/8″.

Containers

Cap.	Opening Size ID	Opening Size OD	O'all Size, Dia. × Ht.		Each

w/o Screw Cap	—	5 3/4″ Dia.	× 4″ Ht.	5199T59	21.50
w/ Screw Cap	—	5 3/4″ Dia.	× 4 3/4″ Ht.	5199T58	24.83

Optional Accessories

		Each
Spout Extender for Small and Med. Lids (11 1/2″ Lg.)	5199T61	$16.90
Spout Extender for Large Lid (10″ Lg.)	5199T62	24.45
Pump for Lid with Screw Cap (5199T58)	5199T63●	81.67
Reducer Nozzle for Pump	5199T64	3.84

● Pump requires a container that is 3 quarts or larger.

Self-Closing Dispensers

Safely dispense flammable liquids with these containers. Just turn the bottle upside down and push against the flange; release to close. Bottle is leakproof and made of high-density polyethylene. FM approved. Color is red. Max. temperature is 120° F.

32 oz.

Cap.	O'all Dia.	O'all Ht.		Each
8 oz.	3 1/8″	5 1/2″	4321T4	$27.78
32 oz.	4″	10 1/2″	4321T3	32.13

Push-Bottom Dispensers

Simply push on the bottom to dispense liquids. These translucent low-density polyethylene dispensers are lightweight, leakproof, and have a nozzle cap.

10 oz.

Cap.	O'all Dia.	O'all Ht.	Nozzle OD × Lg.		Each
6 oz.	3 1/4″	5 1/2″	1/8″ × 3″	4010T35	$9.19
10 oz.	3 1/4″	6 3/4″	1/8″ × 3″	4010T36	10.76
16 oz.	5″	9 1/2″	3/16″ × 6″	4010T38	14.72

Squeeze Bottles

Dispense solutions, dyes and inks (unless otherwise indicated), and other fluids. All bottles are translucent, except Style C, and have threaded caps. Low-density polyethylene bottles are softer and more pliable than high-density polyethylene bottles.

Low-Density Polyethylene

A ***With Standard Nozzle—*** Include a nozzle cover.

B ***With Flip-Up Nozzle—*** Nozzle flips up for dispensing.

C ***Choose-a-Color—*** Cap and bottle are colored for easy identification. **To Order:** Please specify color: clear, red, or yellow.

D ***Antistatic—*** Static-safe bottle has an average surface resistivity of 10^9-10^{10} ohms/sq. Cap and bottle are translucent blue.

E ***With Wide Dispensing Pattern—*** Bottles have a 5/16″ wide ribbon applicator cap.

F ***Sprayer/Dropper—*** Use with the tube to dispense a stream of liquid; remove the tube to use as a dropper. Bottle comes with tube and nozzle cover. *Note:* Not for inks.

G ***With Straight Rigid Precision Nozzle—*** Have a 2″ long aluminum nozzle with nozzle cover.

H ***With Angled Rigid Precision Nozzle—*** Have a 3 3/4″ long aluminum nozzle with nozzle cover, and include an internal tube that reaches to the bottom.

J&K ***With Brush Applicator—*** *Style J* comes with an external Type 304 stainless steel tube and choice of brush material. **To Order:** Please specify brush material: soft camel hair or nylon.

Style K is excellent for cleaning circuit boards, and comes with choice of brush material. *Note:* Not for dyes and inks. **To Order:** Please specify brush material: static-safe horsehair or nylon.

L ***Precise Volume—*** Clear graduated polymethylpentene cup dispenses exact volume of liquid. Simply squeeze the bottle to fill the cup to the desired level. Cup graduation marks are every 5 ml (up to 25 ml).

High-Density Polyethylene

M ***With Adjustable Nozzle—*** Nozzle extends for dispensing in hard-to-reach areas and has a nondrip top.

N ***Dispensing Bottle Set—*** Includes eight bottles, eight nozzles with covers, and one steel wire basket with handle (18″ Lg. × 9″ Wd. × 3 3/4″ Ht.).

Precision Needle-Tip Squeeze Bottles

Choose needle tips for your most precise applications. Bottles are made of low-density polyethylene, have a threaded polypropylene cap, and have a Type 304 stainless steel needle. All needles are protected by a needle cover (except the 3″ needle). Bottle height does not include the needle.

Needle Gauge Size	Needle Length	Applications	1 1/4 oz. Bottles 1 5/8″ Lg. × 7/8″ Wd. × 3″ Ht.	Each	4 oz. Bottles 1 7/8″ Dia. × 4 5/16″ Ht.	Each	8 oz. Bottles 2 5/16″ Dia. × 5 3/8″ Ht.	Each

Squeeze Bottles with Angled Nozzle

Also called wash bottles, just squeeze these bottles to dispense liquid through the downward angled spout. All bottles are low-density polyethylene, except Styles H and J. All have polypropylene threaded caps, except Styles G and J.

(A) Choose-a-color squeeze bottles have colored nozzles and caps to identify bottle contents at a glance. Bottles are translucent. **To Order:** Please specify cap and nozzle color: blue, green, red, translucent, or yellow (unless noted).

(C&D) Vented squeeze bottles have a vent system to prevent gas buildup and release vapors when bottle is not in use to eliminate dripping. Colored printed labels identify contents and hazard codes. The caps match the color of the labels. Bottles are translucent. *Style D* is contaminant resistant and has an integral nozzle that does not have to be removed for filling. **To Order:** For *Style C*, please specify label: acetone, ethanol, isopropanol, methanol, or a write-on label. For *Style D*, please specify label: acetone, distilled water, ethyl alcohol, isopropanol, or methanol.

Spray Bottles

A B C D E F G H J

Choose a spray bottle that will perfectly suit your needs. All are made of polyethylene and allow you to adjust output from fine mist to solid stream (except Style C, which only has a fine mist). All are translucent, except Style J. Spray bottles with graduations (9864T53 and Styles D-J) are labeled in oz., ml, and dilution mixing ratios.

A Trigger Spray Bottles—Filter screen at base of tube prevents clogs.

B Easy-to-Reach Trigger Spray Bottle—Comes with a 36″ long tube so it can reach places other sprayers can't. Filter screen at base of tube prevents clogs.

C Misting Pump Spray Bottles—Bottles spray a fine mist and come with a clear protective cap for the plunger pump.

D Choose-a-Color Trigger Spray Bottle—Label is bilingual (English and Spanish). **To Order:** Please specify blue (glass cleaner), green (disinfectant), orange (metal cleaner), purple (degreaser), or red (all-purpose cleaner).

E Leakproof Trigger Spray Bottle—Trigger won't leak, even if bottle is upside down. Comes with a write-on checklist and label to identify contents.

F Any-Angle Trigger Spray Bottles—These bottles spray at any angle—even upside down. Come with a write-on checklist that allows you to identify contents.

G Wide Mouth Trigger Spray Bottles—No funnel needed to fill these bottles—the wide mouth helps you refill quickly and easily without spilling. The 32 oz. bottle also has a high volume trigger sprayer that sprays up to 2½ times more liquid per stroke.

H&J High Volume Trigger Spray Bottles—Dispense up to 2½ times more liquid per stroke. Ergonomically designed long trigger allows you to use more than one finger at a time when spraying. Bottles come with a write-on label to identify contents. *Style J* is silver with a clear window stripe for viewing graduations and contents.

Push-Top Dispensers

K L M N P

Simply push down on the top of these dispensers and dish fills with liquid to moisten swabs, brushes, wipes, sponges, and cloths. *Plastic* dispensers are high-density polyethylene and can be used with more aggressive solvents and chemicals.

Small Capacity—Perfect for swabs and brushes. All come with stainless steel pump assemblies.

(K) Plastic with locking cap prevent accidental spills.

(K) Static-dissipative plastic has a surface resistivity of 10^7-10^9 ohms/sq.

(L) Conductive plastic has a surface resistivity of 10^2-10^6 ohms/sq.

(L) Amber-colored glass protects light-sensitive contents.

(M) Tin allows storage of fluids that are not compatible with plastic.

Large Capacity—Ideal for wipes, sponges, and cloths. Excess liquid drains back into dispensing can through a perforated flame-arrestor plate. Choose from plastic and steel dispensers. All come with brass pump assemblies and are FM approved.

Compression Sprayers

Apply layers of degreasers, insecticides, disinfectants, cleaning solutions, herbicides, and more. All compression sprayers are pressurized by a few strokes of the pump handle. All have fluoroelastomer seals, unless otherwise indicated.

The material of the tank, pump, seal, and gasket can affect a sprayer's compatibility with a chemical or solution. Make sure that all parts of the sprayer are compatible with your application.

A ***Economy Compression Sprayers—*** Have a cone spray nozzle. The ***repair kit*** includes a neoprene pump cylinder gasket, O-ring seals, plunger cup, and pump cylinder check valve.

B-D ***Compression Sprayers—*** *Style B* has a nozzle that adjusts from stream to cone spray, a built-in relief valve, and a shoulder strap. Tank color is translucent white. The ***repair kit*** includes a pump gasket, pump check valve, brass nozzle cap, and O-ring seals.

Style C has a nozzle that adjusts from stream to mist spray, and has a built-in relief valve. Comes with a shoulder strap. Tank color is translucent. The ***repair kit*** includes a gasket, check valve, nozzle cap, O-ring seals, piston, and shut-off spring.

Style D has a flat-fan spray nozzle and a shoulder strap. The ***repair kit*** includes a check valve, plunger cup, and fluoroelastomer tank gasket.

E ***Highly Chemical-Resistant Compression Sprayer—*** PTFE encapsulated silicone and fluoroelastomer O-rings allow this sprayer to resist tough chemicals such as acetone, naphtha, xylene, and toluene. Includes two flat-fan spray nozzles. Tank color is red. The ***repair kit*** includes a PTFE encapsulated silicone O-ring, fluoroelastomer O-rings, plunger cup, gaskets, springs, and a washer.

F&G ***Compression Sprayers with Type 304 Stainless Steel Tank—*** These tanks offer good corrosion resistance. *Style F* has a flat-fan spray nozzle and comes with a shoulder strap. The ***repair kit*** includes O-ring seals, plunger cup, pump cylinder check valve, and fluoroelastomer pump cylinder gasket.

Style G nozzle adjusts from stream to cone spray. 7529T22 comes with a shoulder strap. The ***repair kit*** has a check valve, plunger cup, and fluoroelastomer tank gasket.

H ***Backpack Compression Sprayer—*** Has a flat-fan spray nozzle, two padded shoulder straps, waist belt, and a strainer in the fill opening. Tank color is translucent white. The ***repair kit*** has O-ring seals, plunger cup, pump cylinder check valve, and fluoroelastomer pump cylinder gasket.

J ***Compression Sprayer with Wheels and Type 304 Stainless Steel Tank—*** Easily move sprayer to wherever you are working. Tank offers good corrosion resistance. Sprayer has a flat-fan spray nozzle and two 8″ dia. solid rubber tires. The ***repair kit*** includes a rubber gasket, cup valve, nuts, O-ring seals, plunger cup, rubber bottom valve, springs, and washer.

Air Atomizing Sprayers

Be a friend to the environment and choose these sprayers over aerosol sprayers to uniformly spray thin viscosity liquids up to SAE 10 motor oil. These sprayers are easy to use: simply fill the sprayer and pressurize it with compressed air. If you need to refill, depressurize the sprayer, refill, and recharge. Working pressure is 80 to 145 psi. Max. pressure is 200 psi. The ***repair kits*** include O-ring seals, packing, and replacement nozzles to repair the upper housing assembly.

K&L ***Aluminum Housing and Nickel-Plated Aluminum Housing—*** Use with water-soluble liquids. Both styles come with eight mist nozzles, one pin stream nozzle, and fluoroelastomer seals. 7054T8 is red. *Style L* is nickel plated on the inside and outside for superior chemical resistance.

M&N ***Chrome-Plated Brass Housing—*** Use with water-soluble liquids. Both come with one mist nozzle that can be converted to a pin stream nozzle, and fluoroelastomer and PTFE seals. *Style N* also comes with a relief valve.

P ***Steel Housing—*** Use with liquids that are not water soluble. Comes with one mist nozzle that can be converted to a pin stream nozzle, and fluoroelastomer and PTFE seals. Color is red.

N

Sometimes bigger still is better—if your pail isn't large enough, choose a tub for its greater storage capacity. All are nestable.

(J) Round Reinforced Rubber— Reinforced, ribbed sides make these tubs crack and crush resistant. All are seamless and have a curved lip around the top for carrying. Max. temperature is 212°F. Color is black.

(K) Round Rubber/Polyethylene with Rope Handles— Blend of rubber and polyethylene stands up to hard use and resists cracking. Rope handles are polypropylene. Max. temperature is 165°F. **To Order:** Please specify color: black, blue, or red.

(L-N) Oval, Round, and Square Galvanized Steel with Welded-On Handles— Have a rod-reinforced top edge and leakproof, locked seams. Not temperature rated.

Plastic Pails and Snap-Lock Lids

Round Pail with Tear-Tab Lid

Square Pail

Lid with Spout

These pails and tight-fitting lids can be used together to ship nonhazardous materials. All are nestable, made of FDA-compliant polyethylene, and have a max. temperature of 140° F.

Round pails and lids come in various colors. Lids have an SBR rubber gasket. **To Order:** For pails and lids, please specify color: blue, green, red, or white. ***Square*** pails and lids are white.

Lids with tear tab provide tamper evidence so you'll know if the lid has been opened. Once the tear tab has been removed, you can still reuse the lid, but the tamper evidence feature is gone.

Lids with spout have a telescoping spout for no-leak pouring.

UN-Compliant Plastic Shipping Pails and Snap-Lock Lids

Pail with Lid (Lid Sold Separately)

Lid with Spout

When paired with one of the tight-fitting lids (sold separately), these pails are perfect for shipping hazardous materials. All pails are nestable, made from polyethylene, have a steel bail handle with a plastic grip, and can be used for shipping only once. Lids have an SBR rubber gasket. Max. temperature is 180° F.

Standard pails and ***lids*** are FDA-compliant, except the black models. **To Order:** For pails and lids, please specify color: black, blue, gray, green, red, or white.

Pails and ***lids with protective coating*** are fluorinated to reduce solvent absorption and permeation. Color is white.

UN-Compliant Plastic Shipping Pails with Easy-Open Twist-Lock Lids

Round

Square

No tools required for twist-lock lids, so opening and closing them is quick and easy. Pails and lids are made from white FDA-compliant polyethylene. All pails have a plastic bail handle, except 40015T59. All lids have a neoprene gasket. Max. temp. is 150° F.

Round pails with drip-free pouring have a solid rim designed for cleaner pouring.

To open the pails that are ***for shipping hazardous solids***, just squeeze the release and turn the lid.

To open pails that are ***for shipping hazardous liquids***, pull the handle back and use it to turn the lid. These pails are available with or without a spout.

Swivel Seat Pail Cover

Use your steel or plastic pail for storage as well as a seat. Cover is polypropylene and swivels on quiet ball bearings. Fits 5-, 6-, and 7-gallon, open-head pails with 11 3/4" to 12 1/4" top OD. Size is 12 1/4" OD × 3" Ht. Color is green.

5835T36 ..... Each $12.89

UN-Compliant Plastic Shipping Pails with Small Mouth Opening

Also known as closed-head pails, these pails are made from FDA-compliant polyethylene. The small mouth allows you to ship higher pressure-rated materials. They have an interlocking design that allows them to stack easily. All have threaded caps and a max. temperature of 150° F. **To Order:** Please specify color when necessary.

Cap with tamper-evident seal assures content integrity. Once the seal is broken, the cap (although reusable) is no longer tamper evident.

UN-Compliant Steel Shipping Pails

All pails have an epoxy phenolic lining to inhibit rust. **To Order:** Please specify color: black or gray.

Note: Pails must be used with lids listed below to meet UN specifications.

Open Head— All are nestable and have a steel bail handle with plastic grip. The lids have 16 lugs.

Closed Head with Small Mouth Opening— The 1½″ diameter mouth allows for higher pressure-rated materials to be shipped within this container. Pail has a screw cap, a flip-up handle, and a telescoping metal spout for easy pouring.

Pail Liners

Don't waste time cleaning your pails—protect them with these liners. Made of FDA-compliant resins, these round, seamless, 15-mil thick liners have a contoured lip that hugs your pail's rim. All liners are translucent, except the antistatic models, which are translucent pink. *Antistatic models* have a surface resistivity of 10^{11} ohms/sq.

Polyethylene liners have a max. temperature of 175° F.

Polypropylene liner has a max. temperature of 300° F.

Round Plastic Batch Cans with Faucet

Not only do these batch cans have a faucet for easy dispensing, but they also have a smooth, seamless construction that impedes bacterial growth. All are translucent white and include a loose-fitting cover.

Economy polyethylene batch cans have a polyethylene faucet that connects to the polypropylene fitting. The *20- and 32-gal. models* have an EPDM gasket. Faucet has a 2″ OD. The *45-gal. model* has a faucet with a 3/4″ OD.

Polyethylene and ***heavy duty polyethylene batch cans*** have a polypropylene faucet that has two TFE O-rings and connects to a polyethylene outlet. Faucet has a 5/8″ OD.

NSF/USDA-approved heavy duty polyethylene batch cans have a polyethylene faucet that connects to a PVC outlet. Faucet has a 3/4″ OD.

Polyethylene Batch Cans with Handles

With Stainless Steel Handles and Optional Cover

Get a grip—handles make it easier to move batch cans. Cans are seamless polyethylene and meet FDA and USDA requirements. All are nestable as well as stackable when used with optional covers. Color is translucent white. Max. temperature is 120° F.

Optional covers are loose fitting.

USDA-Compliant Stainless Steel Drums

In addition to being corrosion resistant, these drums have smooth, welded seams to prevent food and chemicals from collecting in crevices. The top rim is reinforced with a ½″ dia. rod and sealed.

Drums with Protective Bottom Ring— Bottom ring minimizes wear and tear on the bottom of the drum when sliding drum along the floor.

Optional covers are 16-gauge stainless steel and loose fitting.

Optional covers with leverlock closing ring are 16-gauge stainless steel and include an FDA-compliant sponge-rubber gasket.

Fiber Drums

Round All-Fiber Drum for Dry Materials

Square All-Fiber Drum for Dry Materials

Fiber Drum for Dry Materials with Galvanized Steel Rims

Fiber Drum for Liquid and Dry Materials with Galvanized Steel Rims

Our lightweight fiber drums are an economical choice for your storing and shipping needs. All are tan and not rated for temperature. All drums that meet UN specifications are UN-compliant for shipping.

32415T43 has a two-piece body with a separate lid. Good for fluorescent-bulb recycling, drum holds approximately 85 bulbs that are 1″ in diameter.

Fiber drums for liquid and dry materials with galvanized steel rims come with a 0.004″ thick polyethylene liner. The cover with leverlock closing ring comes with a urethane gasket and two openings (one ¾″ NPS and one 2″ NPS).

Salvage/Overpack Drums

Steel Drum with Leverlock Closing Ring

Mobile Polyethylene Drum

Perfect not only for secondary containment, but also for temporarily storing and transporting leaking containers. All drums are UN-compliant for shipping.

Steel drums come with a rust-inhibitive coating. All are yellow with a red cover with EPDM gasket, unless noted. All come with "Salvage Drum" printed in English, Spanish, French, German, and Japanese.

Polyethylene drums are nestable. Drums and covers are yellow. Covers screw on and have a polyethylene gasket, unless noted. *Mobile drum* comes with two 6″ dia. polyolefin wheels and has a load capacity of 250 lbs.

Drum Locks

For Open Head

For Closed Head

Secure 30- and 55-gal. steel drums. Padlock required (maximum shackle dia. of 5/16″).

Bolt for Open-Head Drums— Replace the standard ⅝″-11 bolt on the drum closing ring and lock.

1900A42 ..... **Each** $72.30

Bar for Closed-Head Drums— Replace plugs on ¾″ and 2″ drum openings with plugs and Buna-N and polyethylene gaskets. Slide the bar through the hole in each plug and lock.

1900A41 ..... **Each** $77.16

Locking Drum Fill Caps

NPT Male

Prevent tampering with the contents of your tank while allowing access for filling. Padlock required (maximum shackle diameter of 5/16″). Made of cast iron. Not rated for temperature.

Pipe Size	O'all Ht.	Dia.		Each
2″ NPT Male	2 ½″	3 5/16″	4906K21	$21.98
2″ NPT Female	1 5/8″	3¼″	4906K23	23.87

4″ NPT Female	2 ¼″	5 15/16″	4906K29	70.97

Drum Vents

Prevent drum failure by using these vents to release pressure and vacuum buildup caused by draining liquids and sudden temperature changes. In case of fire, a flame arrester prevents flashback into the drum. FM approved.

(A) Automatic pressure and manual vacuum relief vents open when internal pressure reaches 5 psi. A knob on top of the vent allows manual vacuum relief. Vents end mount on horizontal drums.

(B-E) Automatic pressure and vacuum relief vents open when internal pressure or vacuum reaches 5 psi. *Style D* has a removable cap so vent can be used as a fill opening. It also has a 6″ long flame arrester. *Style E* comes with two carbon filters. Each filter traps 99% of vapors. Vents top mount on vertical drums.

Drum Liners

F-J

K

L-N

P&Q

Why waste time cleaning drums? Simply use one of these liners and then dispose of it. All are made of FDA-compliant resins, except Styles J and K. All antistatic liners (Styles G, M, and Q) have a surface resistivity of 10^{11} ohms/sq. The conductive liners (Style K) have a surface resistivity of 10^{3} to 10^{5} ohms/sq.

Protective Drum Covers

For Open-Head Drums with Nut-and-Bolt Closing Ring

For Open-Head Drums without Closing Ring

For Closed-Head Drums

You may not be able to save your drums from dings, but you can protect your drum lids and heads from damage with these drum covers.

Polyethylene covers are 40-mils thick. Max. temperature is 175° F.

Galvanized steel covers have a beaded rim. Made of 26-ga. steel.

● Unified National Fine thread.

Polyethylene Drum Faucets

Primarily used on drums, these faucets can also be used on tanks, carboys, and other containers. All faucets are made of FDA-compliant resins, except Style C. Faucets are not lockable.

If your drum has a 2″ Buttress or Mauser thread, see this page for drum thread adapters. If you would like to add a threaded outlet to your drum, see page 115 for through-wall fittings.

Drum Plugs, Caps, and Gaskets

Drum Plugs

All plugs, when properly installed, meet UN specifications. For drum-plug wrenches, see page 2767.

Styles H-L are made of FDA-compliant resins and have a max. temperature of 125° F. Package quantity is 5. *Polypropylene plugs* are gray, unless noted. *Polyethylene plugs* are white.

Polyethylene Troughs

A

B *With Optional Cover and Optional Mobile Base*

Polyethylene troughs are built tough so they won't rust, dent, or leak—even when frozen. All are nestable.

(A) Structural-foam troughs have a heavy-wall construction and a 1 1/4″ NPT female plastic drain with plug. Max. temperature is 120° F. Color is black.

(B) FDA-compliant trough is ideal for contents where sanitation is important. Made of FDA-compliant resins and meets USDA requirements. Max. temperature is 155° F. Color is white. *Optional cover* is made of white polyethylene. *Optional mobile base* is made of a galvanized steel angle frame and has four 5″ dia. phenolic swivel casters. Base adds 6 7/8″ to trough height.

Polyethylene Tanks

Vertical Tank

All tanks have graduations and a threaded fill cap. They are UV-stabilized for long-term outdoor service. Color is translucent white.

Vertical tanks are freestanding. All have a polypropylene female drain fitting with EPDM gasket (unless noted). Max. temperature is 140° F (unless noted).

Horizontal tanks with legs have molded legs so they can stand on their own. Max. temperature is 130° F. *Tanks with drain* have a polyethylene female drain fitting with fluoroelastomer gasket.

Double-Wall Tanks with Forklift Entry

Two walls are better than one—these tanks provide extra protection for products that require double-wall containment, such as diesel and waste oil, solvents, and antifreeze. The second wall forms a compartment that holds 110% of the primary compartment's storage capacity.

All tanks are steel and have a 4″ dia. fill opening with hinged cap and removable strainer. They also have two 2″ NPT female openings for venting, two 4″ NPT female openings for emergency venting, and a 2″ NPT female drain for draining the secondary compartment. There's a 3/8″ NPT female dipstick opening (dipstick included) to check for leaks in the primary compartment. Feet on the bottom of the tank raise the bottom off the floor, allowing forklift entry. Meet UL 142 standards for above-ground storage. Color is red.

Cap., gal.	O'all Size, Lg. × Wd. × Ht.	Wall Thick.	Forklift Entry	Forklift Opening Size, Wd. × Ht.		Each
120	32″ × 36″ × 42″	12 ga.	4-Way	19 1/2″ × 2″	3696K71	$2,165.00
240	55″ × 36″ × 42″	12 ga.	4-Way	19 1/2″ × 2″	3696K73	2,651.74

Easy-Drain Cylindrical Tanks

Slopes aren't just for skiing—the cone-shaped bottom of these tanks is sloped to ensure easy and complete drainage.

(A) Polyethylene tanks with covers have a 19° bottom slope and seamless, heavy-wall construction with rounded corners. All tanks include a loose-fitting cover and PVC NPT female drain fitting with EPDM gasket. Max. temperature is 140° F. Color is translucent white.

Optional stands are steel with a black finish. Choose from styles with or without a mixer mount for attaching a mixer (not included). All stands allow a 15″ minimum clearance from bottom of drain to floor.

(B) Type 304 stainless steel tanks have a 10° bottom slope and come with three 2″ dia. steel pipe legs (nonsanitary) with adjustable feet.

Standard tanks have a smooth dull mill finish and come with a Type 304 stainless steel NPT female drain fitting.

Sanitary tanks have a brushed polished finish inside and out. Furnished with a sanitary, Type 304 stainless steel tri-clamp drain. (See pages 208-210 for fittings compatible with tri-clamp drains.)

Also Available: Hinged and unhinged loose-fitting covers for Style B stainless steel tanks. All covers are made of Type 304 stainless steel and have a smooth dull mill finish. Please ask for 3772K888 and specify tank part number as well as hinged or unhinged cover.

Tanks with Forklift Entry

When you need large storage containers that are easy to move with a forklift, choose these durable tanks.

Polyethylene horizontal tanks are seamless, UV-resistant, and made with FDA-compliant resins. All have been paired with a sturdy 12-ga. steel skid that has a black finish. All also have an EPDM gasket, threaded cap, and 25-gal. graduations (except 3664K22, which has 50-gal. graduations). Max. temperature is 140° F. Color is translucent white.

Round-bottom tanks have a 1½″ NPT female ball valve drain that's made of PVC. 3664K16 has an 8″ dia. fill opening and 3664K22 has a 6″ dia. fill opening.

Flat-bottom tanks are loaf-shaped for a low center of gravity and greater stability. They have a 6″ dia. fill opening and a 2″ NPT female drain opening that's made of PVC and polyethylene.

Steel vertical tanks meet UL 142 standards for above-ground storage, making them ideal for storing fuel and waste oil. All have two 3/16″ thick steel forklift channels, and they also have a 1½″ NPT female drain with cast iron plug. Color is red.

The *260-gal. capacity tank* has four 2″ NPT female openings and one 3″ NPT female opening.

The *500-gal. capacity tank* has nonslip steps and hand grips for easy access to the top of the tank. It has four 2″ NPT female openings and one 4″ NPT female opening.

UN-Compliant Tank with Forklift Entry

Also known as an intermediate bulk container (IBC), this tank meets UN31HA1/Y transportation specifications. It has the capacity of five 55-gal. tanks, yet uses up to 25% less floor space. Secured to a galvanized steel pallet, it is easy to maneuver with a forklift. Stacks two high when full and four high when empty.

The tank is made of FDA-compliant polyethylene and is protected by a rigid tubular steel cage. Tank comes with a 6″ top opening with threaded cap and TPE gasket, a 2″ NPT fill opening, and a drain outlet that has a 2″ NPT valve with dust cap. Max. temperature is 150° F. Color is translucent white.

Cap., gal.	O'all Size, Lg. × Wd. × Ht.	Wall Thick.	Forklift Entry	Forklift Opening Size, Wd. × Ht.		Each

Steel Elevated Tanks

An elevated bottom provides stability, and a lifting lug on top makes it easy to transport these steel tanks. They are ideal for storing fuel and waste oil. All tanks have a threaded 4″ NPT female emergency vent fitting and three or five 2″ NPT female openings that include plastic plugs. Channels are made of ¼″ thick steel. All meet UL 142 standards for above-ground storage. Color is red.

Drain Pans

(G&H) Polyethylene drain pans have a pouring spout and a handle. *Style G* has a drain with plug and a storage compartment where fluids drain for disposal at a later date. *Style H* has an antisplash lip.

(J&K) Mobile polyethylene drain pans can be moved wherever they are needed. *Style J* has a red polypropylene funnel that mounts on a telescoping tube. It includes four swivel casters with 2½″ dia. polyolefin wheels, a 1¾″ threaded pour spout with cap, and a handle. Shipped unassembled. *Style K* is great for big jobs. Fluid drains from this pan into the storage compartment for disposal at a later date. Has two 3″ dia. polyethylene wheels. Includes a drain with plug, 2³⁄₁₆″ dia. pouring spout, and handgrips.

(L&M) Galvanized steel drain pans come in two styles. *Style L* has a one-piece seamless construction. *Style M* has a pouring spout with an antisplash guard and handles.

(N) FM-approved steel drain pans have a detachable wide-mouth plated-steel funnel, a built-in flame arrester, a ¾″ threaded plug for emptying, and a bail handle.

Spill-Control Containers

(P) Polyethylene container for pails is perfect for small containers. Comes with removable grating for easy cleaning.

(Q) Polyethylene container for drums has an octagonal shape that provides greater spill control than same-size round containers.

(R) Large-capacity polyethylene containers have recessed rings to secure drums. All have bottoms with forklift entry except 39855T3, which has a flat bottom so it can be paired with a standard pallet for four-way forklift entry. "HAZARDOUS" is stenciled in black. Meets EPA 40 CFR 264.175.

(S) Large-capacity steel container meets EPA 40 CFR 264.175.

(T) Large-capacity polyethylene container with removable bottom grating can be nested. Meets EPA 40 CFR 264.175.

Mobile Spill-Control Containers and Cart

Easily move these containers wherever they are needed. All meet EPA 40 CFR 264.175, except Style A.

(A) Low-profile polyethylene container has a drain spout and four swivel casters with 3″ dia. polyolefin wheels. Color is yellow.

(B) Nestable polyethylene container includes a steel dolly that has four swivel casters with 3″ dia. polyolefin wheels. Drum container is yellow. Dolly is orange.

(C) Steel container has four swivel casters (two locking) with 3″ dia. hard rubber wheels. Color is yellow.

(D) Polyethylene cart has a drain plug for easy drainage, built-in tool tray, and removable top grating deck for easy cleaning. Comes with two locking swivel casters with 8″ dia. polyolefin wheels and two 10″ dia. polyolefin wheels. Cart is yellow with black deck.

Flexible Spill-Control Pads

When you need an economical alternative to spill-control pallets, choose these reusable, chemical-resistant vinyl-coated polyester pads. Flexible sidewalls allow you to drive in and drop your drums directly onto the pad; walls spring back into shape. Pads fold for easy storage. The six-drum model meets EPA 40 CFR 264.175.

No. of 55-gal. Drums	Spill Cap., gal.	O'all Size, Lg. × Wd. × Ht.	Color		Each

Spill-Control Pallets

All pallets have removable grating for easy cleaning. Grating is black, except Style H, which is gray. Pallets meet EPA 40 CFR 264.175, unless noted.

(E) Low-profile polyethylene pallets have an *optional ramp* that has a ribbed, nonskid surface. The weight capacity is 1,000 lbs. Color is black. *Optional pair of linking connectors* allows you to connect multiple pallets. Use two per side.

(F) Low-profile large-capacity polyethylene pallets with bladder have a pallet to capture overspills and small leaks while larger spills deploy a double layer polyethylene bladder. The bladder holds up to 55 gallons and is 66″ Lg. × 58″ Wd. when fully deployed. *Optional ramp* has a ribbed, nonskid surface. Weight capacity is 600 lbs. Color is yellow.

(G&H) Large-capacity polyethylene pallets with forklift entry are designed with large reservoirs to handle bigger spills. *Style H* has recessed rings for secure drum storage and a deck that can be removed with a forklift. Pallets are stackable and nestable.

(J&K) Low-profile steel and steel pallets with forklift entry are made of 12-ga. steel. *Optional ramps* have a ribbed, nonskid surface. Weight capacity is 1,500 lbs. Color is gray.

Safety Cans with Faucet

Upright Steel Can

Easy-Tilt Steel Can

Use for trouble-free dispensing of flammable liquids. All cans have a flame arrester, a self-closing ¾″ OD faucet, and a self-closing pressure-relief cap. FM approved. Meet OSHA and NFPA (National Fire Protection Association) Code 30 requirements.

Steel cans are for petroleum-based liquids. ***Type 316 stainless steel cans*** are for liquids such as acetone, alcohol, ether, toluene, and xylene. ***Plastic cans*** are for aggressive chemicals and corrosives.

Upright Cans

Steel and plastic cans have a brass faucet. Stainless steel cans have a Type 316 stainless steel faucet.

	Cap., gal.	Can Size Dia.	Can Size Ht.	Fill Spout OD	Color		
Steel	5	11¾″	16⅞″	1½″	Red	9890T11	$106.22

Plastic	5	11½″	17″	1½″	Red	4510T12	191.15

Safety Disposal Cans

Store leftover chemicals and solvents until they can be properly discarded.

For Nonflammable Liquids

Use this plastic can to store nonflammable acids and caustics. It has a 1 7/16″ OD spout and a spring-loaded, self-closing cap. Can is translucent and graduated at quart, liter, and gallon intervals.

Cap., gal.	Overall Size Lg.	Wd.	Ht.	Color		
1	7 5/8″	4 5/8″	12 3/4″	White	8989T11	$52.30

For Flammable Liquids

The spring-loaded, self-closing cap on these cans automatically vents to relieve excess vapor pressure, and a flame arrester protects against outside ignition. All have a 3 3/4″ OD spout, are FM approved, and meet OSHA and NFPA (National Fire Protection Association) Code 30 requirements.

Galvanized steel cans are for petroleum-based liquids. ***Type 316 stainless steel cans*** are for liquids such as acetone, alcohol, ether, toluene, and xylene. ***Plastic cans*** are for aggressive chemicals and corrosives.

Dispensing Stands for 5-Gallon Cans

To create a convenient dispensing station, pair this stand with your round, 5-gallon safety can (not included). Made of steel with a sturdy, adjustable safety lock, it can also hold other round containers up to 12 1/4″ in diameter that weigh up to 75 lbs.

Overall size is 14″ Lg. × 14 1/8″ Wd. × 29 3/4″ Ht. The stand folds for compact storage. Color is blue.

2704T14 ..... $81.91

(Can Not Included)

Mobile Fuel Dispensers

Dispense fuel wherever you need it.

Style A has a gravity-fed flow rate of 2 gpm, a 1″ OD nozzle, and a 10-ft. hose. Wheels are plastic. Meets UN specification UN3H1/Y/130.

Style B have a gravity-fed flow rate of 5 gpm, a 3/4″ OD nozzle, and a 10-ft. hose. Wheels are pneumatic rubber. Meets UN specification UN3H1W and are D.O.T. (Department of Transportation) approved.

Style C are our highest capacity steel dispensers. All have a rotary hand pump that dispenses 4 gpm. They also have a 3.5-micron filter that strains out dirt and water, plus a valve to switch between filling and draining. A flame arrester protects against outside ignition. The pump hose is 7-ft. long and has a 3/4″ OD and grounding wire. An 8-ft. grounding strap and clamp are also included. Wheels are rubber. FM approved.

Safety-Rated Steel Pail and Drum Funnels with Cover

Minimize spills while filling pails and drums. Funnels are FM-approved and have a flame arrester to protect against outside ignition. Connection is 2″ NPS male. Color is red.

Pail funnel fits 5-gallon closed-head pails.

Drum funnels fit 30- and 55-gallon closed-head drums. Hinged cover automatically snaps shut at 165° F to extinguish flames. Padlock hasp on cover accommodates a 5/16″ shackle dia. (padlock not included).

Self-closing drum funnel fits 30- and 55-gallon closed-head drums. Hinged cover automatically snaps shut at 165° F to extinguish flames. Padlock hasp on cover accommodates a 5/16″ shackle dia. (padlock not included). It also includes a ball valve that reduces vapors and prevents spills if the drum tips over. A 3/4″ drum vent provides automatic pressure relief.

(A-D) Vapor-lock-resistant funnels have outside ribs to prevent vapor lock. *Styles A* and *C* are autoclavable.

(E) Microfunnels with hanging tab are autoclavable.

(F) Quick-drain funnels have internal ribs to quickly drain materials and are autoclavable.

(G) Weighing funnels can be used as funnels, scoops, and weighing dishes. They are also autoclavable.

(H) Large-capacity funnel has a 6 11/16-gal. capacity.

(J&K) Funnels with filter screen and hanging tab have a permanent 60×60 mesh brass screen. *Style K* has an extra-long spout.

(L) Funnel with flexible spout has a clear extendable spout and a molded-in hand grip.

(M) Funnel with offset spout has a removable tapered stem offset 8″, a handle, and a removable 27×27 mesh brass screen.

(N-Q) Funnels with dirt- and dust-resistant caps have a polypropylene cap for both the funnel and the spout. *Style N* has a hanging tab. *Style P* has a handle. *Style Q* has a flexible spout and a handle.

(R) Funnel for powders has a large spout that allows the flow of powders.

Metal Funnels

(C) Galvanized steel funnel has a removable 40×60 mesh brass screen.

(D) Quick-drain galvanized steel funnels have a fluted bottom that prevents swirling and increases drainage speed. Also has a removable 50×50 mesh brass screen.

(E) Quick-drain galvanized steel funnels with spill-resistant rim have a fluted bottom that prevents swirling and increases drainage speed. Taller rim allows for faster pouring without spilling. Also has a removable 50×50 mesh brass screen.

(F) Large-capacity galvanized steel funnels have a removable 40×60 brass mesh screen. 4371T2 has a rim with a reinforcing ring.

(G) Galvanized steel funnel with extra-long flexible spout has a 40×60 mesh brass screen.

(H) Galvanized steel funnel with offset spout has a removable 50×50 mesh brass screen.

(J&K) High-stability galvanized steel funnels have two styles. *Style J* have a taller rim that allows for faster pouring without spilling and a skirt to hold the funnel in place. Also come with a fluted bottom that prevents swirling and increases drainage speed, and a removable 50×50 mesh brass screen. *Style K* has legs that rest firmly on the side of the container and hold the spout in place.

(L) Galvanized steel threaded funnel has a 2″ NPT female connection.

(M) Corrosion-resistant Type 304 stainless steel funnels are rust-resistant and have a hanging ring.

Polyethylene Pail and Drum Funnels

Drain oil filters, cans, beakers, bottles and more without spills or tedious pouring. The sloped, scalloped surface channels hazardous liquids into the drain. Color is yellow.

Pail funnel for closed-head pails fits any closed-head pail. Also fits 12″ dia. open-head pails.

Drum funnels for closed-head drums fit into 2″ openings on any drum. *Drum funnel with Type 316 stainless steel screen* has a 14×14 mesh screen.

Drum funnels for open-head and closed-head drums fit over the rim of open-head drums or into 2″ openings on closed-head drums. *Funnel with flame arrester* has an arrester that prevents flashback caused by sparks.

Plastic Scoops

Styles B, D, E, F and ***K-M*** are chemical resistant.
Style C are individually sealed in a polyethylene bag and sterilized. Made from FDA-compliant resins.
Style J allow you to scoop and measure at the same time. Scoops have two flat sides so they can lay flat or stand on end. All come with 100 ml, 1/2 cup, and 4 oz. graduations (except 8750T4, which has 200 ml, 1 cup, and 8 oz. graduations.)
Style K come in a choice of colors. **To Order:** Please specify color.
Style M are thicker walled for heavy duty applications.

Choose-a-Color Polyethylene Cutting Boards NSF

Assign a different color cutting board to each task to prevent cross-contamination. All are made of polyethylene and have a textured, nonslip surface. They're nonabsorbent and will not chip, splinter, or crack. NSF certified.

Polyethylene cutting boards are available in blue, beige, green, red, white, or yellow. **To Order:** Please specify color.

Antimicrobial polyethylene cutting boards have an anti-microbial agent that inhibits the growth of bacteria and lasts for the life of the board. All meet EPA and FDA guidelines. They are available in blue, green, red, white, or yellow. **To Order:** Please specify color.

Microwave Ovens

A

B NSF

C NSF

Cooking is fast and easy with these microwaves. All have an interior light and see-through door. They come with a power cord with three-prong plug and operate on 120 VAC, 60 Hz. UL listed.

(A) Economy Microwave Oven—This oven has 10 power levels, a digital display, a glass turntable that rotates food for even cooking, automatic defrost, and programmable controls that allow one-touch cooking. Comes with a 2-ft. power cord. The interior is made of steel, and the exterior is made of steel and plastic. Color is white.

(B&C) Commercial Microwave Ovens—Both models have bottom-feed heat distribution for uniform cooking. Come with a 4½-ft. power cord. Doors and interiors are made of stainless steel. NSF certified.

Style B has a dial timer that is clearly marked in 10-, 15-, and 30-second intervals to provide up to six minutes of cooking. Exterior is made of steel. Color is light gray.

Style C has 11 power levels, a digital display, and programmable controls for quick one-touch cooking. It also has automatic three-stage programming—you can program the oven to defrost food, begin cooking food at one level, and finish cooking food at another level. Exterior is made of stainless steel.

Mobile Food Warming Cabinet NSF

Keep food warm during storage and transportation. You can set the temperature from 70° to 200°F. Cabinet is made of high-strength aluminum and has insulation in the top, sides, and doors. The doors have a magnetic latch and handle and can be reversed to open in the opposite direction.

Cabinet has 22 cu. ft. of work space. It has a 125-lb. capacity, and can hold up to 17 trays. Tray racks are spaced every 1½″ and are removable for easy cleaning. Cabinet has four swivel casters (two with brake) with 5″ dia. neoprene wheels. Includes a "power on" indicator light and 7½-ft. long power cord with three-prong plug. Operates on 120 VAC, 60 Hz, single phase and draws 16 amps. UL listed and NSF certified.

Trays are 18″×26″ and are made of aluminum. *Perforated tray* has ⅛″ dia. perforations.

Microwave Leak Detector

Find radiation leaks that occur from damage or everyday wear and tear in microwave ovens. The analog dial reads "Danger" when radiation levels above the prescribed U.S. minimum (5 milliwatts per square centimeter at a distance of 2″) are detected. The scale has "Safe" to "Danger" zone markings. You don't need batteries or an outside power supply to operate the detector, and it's permanently calibrated. Size is 2⅜″ Wd.×1¼″ Dp.×3⅝″ Ht.

1074T2 ..... **Each** $30.82

Insulated Beverage Dispensers/Coolers

5-Gallon Dispenser/Cooler with Optional Cup Dispenser and Cups

Mounting Bracket

Supply cool drinks wherever you need them. Dispensers/coolers are imprinted with "Drinking Water," have a push-button spigot, and have a pressure-fit lid. Made of rust-, chip-, and dent-resistant polyethylene. Color is safety yellow with a red lid.

Mounting bracket has weather-resistant, welded steel construction and a holding strap (mounting hardware not included).

Coffee Makers (NSF)

Brew a hot cup of coffee with our UL listed and NSF certified coffee makers. All come with a 6-ft. power cord (unless noted) with a three-prong plug and operate on 120 VAC, 60 Hz.

(A&B) Fast-Brewing Drip-Style Coffee Makers— Get 12 cups of coffee in four to five minutes. These coffee makers have a top warming plate with separate on/off switch and a plastic brewing basket. Made of stainless steel. Both require paper filters (sold separately below).

Style B has a brass 1/4″ NPT male inline water connection to connect directly to a water source; coffee maker then fills automatically with water when you press the "brew" button. It comes with a 5-ft. power cord and includes a hot-water spout for tea or hot chocolate.

Decanters are made of glass and are sold separately below.

(C) Large-Capacity Percolator-Style Coffee Makers— The perfect choice when you need to make coffee for a crowd. Made of polished aluminum with plastic handles. No filters required.

Model 6159T15 has a coffee-level gauge and an on/off switch.

Coffee Maker Cleaner

No more nightmares about what's lurking in your coffee maker, this cleaner gets inside for a complete cleaning. Cleaner comes in a filter-paper packet that cleans the brew basket, urn, sight glass, and spigot. Each packet cleans a 12-cup coffee maker. There are 24 packets per package. *Note:* Not for use with aluminum.

6199T1 ..... Per Pkg. $10.81

Electric Kettle

Not just a teapot—this kettle boils water faster than a microwave oven. It charges in a base that has a 2-ft. power cord with a two-prong plug; operates on 120 VAC, 60 Hz; and draws 12.5 amps. Kettle lifts freely from the base—no cords attached—making it easy to pour.

Straws, stir sticks, and ***toothpicks*** (all sold separately) come packaged in disposable, self-dispensing boxes. *Toothpicks* are mint flavored.

Straw dispenser has a steel housing with vinyl-coated woodgrain oak finish. It dispenses wrapped straws that are 7½″ to 8¾″ long.

Stir stick dispenser is made of clear acrylic. It dispenses stir sticks up to 5½″ long with a turn of the knob.

Straws, Stir Sticks, and Toothpicks

	Lg.	Box Qty.		Per Box
Wrapped Plastic Straws	7¾″	500	5506T41	$5.16
Plastic Stir Sticks	5″	1,000	5506T42	6.22
Wrapped Wood Toothpicks	3″	1,000	5506T43	4.07

Dispensers

	O'all Size, Wd.×Dp.×Ht.	Cap.		Each
For Straws	9″×4″×7″	200 Straws	5506T31	$72.83
For Stir Sticks	6¼″×3¾″×5½″	150 Stir Sticks	5506T32	24.36

Cup Dispensers

All dispensers can be adjusted to accept paper, plastic, and/or foam cups (not included) with different brim diameters. Made of stainless steel.

Wall-mount dispensers allow you to load cups in the top and pull from the bottom. Mounting hardware included.

Countertop dispensers have nonskid plastic feet. Cups load in and pull out from one side. *Note:* Dispensers cannot be stacked.

Paper cups are wax-coated.

O'all Size, Wd.×Dp.×Ht.	Accepts Cup Brim Dia.	Max. Cup Capacity		Each
Wall-Mount Dispensers				
23⅛″ Ht.	2¾″-3⅜″	50	**4513T2**	$43.26

9-oz. Paper Cups (3″ Dia. Brim)—100/Pkg.			**9769T41**	Per Pkg. $8.39
16-oz. Paper Cups (3½″ Dia. Brim)—50/Pkg.			**9769T772**	Per Pkg. $6.65

Cup Holders

Need an extra hand? Place your drink in one of these self-leveling holders. The rubberized swivel joint adjusts to any position or angle and provides vibration protection. Holder is 4″ high with a 3½″ dia. top that tapers to 3″ at the bottom. Bottom has a 1½″ hole for drainage. Holder is made of ABS plastic; mounting flanges and arm are made of aluminum with a black finish. Mounting hardware included for all except the screw mounting style, which has seven ⁷⁄₃₂″ dia. holes.

Mounting Style	Mounting Feature	Mounting Flange Dia.		Each
Screw	Permanent Mount	2⁷⁄₁₆″	**5338T1**	$30.08
Magnetic	Most Metallic Surfaces	2⁹⁄₁₆″	**5338T2**	40.10
Suction	Smooth, Nonporous Surfaces	2⅛″	**5338T3**	35.62
U-Bolt	For ¼″ to 1¼″ dia. Pipes	—	**5338T4**	34.12

Reusable Ice Packs

Less messy than ice, these packs are durable, reusable, and keep contents colder longer than ice. Made of purified water, they are nonstaining and safe for food. Each pack consists of smaller cubes that can be cut apart and used individually. Each cube is 3″ Wd.×2″ Dp. Outer jacket is made of flexible polyethylene.

No. of Cubes	O'all Size, Wd.×Dp.		Each
18	12″× 9″	**5404K1**	$1.69
36	18″×12″	**5404K2**	2.76

Ice Chests

Made of plastic, these chests are insulated to keep contents cold.

Style A have a push-button lid that swings to either side and locks in the closed position to prevent spills.

Styles B-D have a hinged lid, lid latch (unless noted), swing-up side handles, and a drain plug (unless noted). *Style B* also has a lid strap. *Style D* also have a convenient hatch that allows access to the chest without opening the lid.

Style E allows compact storage; its collapsed size is 13″ Wd.× 3″ Dp.×15″ Ht. It has a soft, nylon fabric cover and a leakproof lining.

Style F has a domed lid, lid latch, and swing-up side handles. Also includes a pivoting handle and two 4⁵⁄₈″ dia. polyethylene wheels.

Style G is similar to Style D but has a pivoting handle and two 10″ dia. all-terrain pneumatic rubber tires.

★Does not include drain plug. ●Does not include lid latch or drain plug.

Ice Makers

Always have ice when you need it but never more than you can store; all machines stop producing ice automatically when their bin is full. They operate on 115 VAC, 60 Hz and come with adjustable legs for uneven surfaces (except Style H). All produce cubed ice except Style H, which produces crescent-shaped ice. UL listed.

Note: Regular maintenance is required so machines run efficiently. ***Liquid cleaner*** for Styles J-L keeps water lines clear and is sold separately below.

Styles H&J—Both include a power cord with three-prong plug.

Style H does not require a drain. The exterior is made of steel; color is white. The interior is polystyrene and has a removable, clear plastic storage bin. Comes with a compression fitting that accepts ¼″ OD copper tubing for water inlet and a 5-ft. power cord.

Style J exterior is stainless steel with a black plastic door. The interior is polyethylene with a molded-in storage bin. Comes with a ¾″ male GHT (garden hose thread) connection for water inlet and a 6-ft. power cord. A 36″ long drain hose is included. Requires a 5″ clearance for the top, sides, and back.

Styles K&L—These high-capacity machines have a stainless steel housing, molded-in polyethylene storage bin, and dark brown plastic door. Come with a ⅜″ NPT female threaded water inlet connection. NSF certified.

Style K has a 6-ft. power cord, three-prong NEMA 5-20 plug (see page 787 for plug configurations), and ½″ NPT female threaded bin drain. It requires a 5″ clearance for the top, sides, and back.

Style L must be hardwired. It has a ¾″ NPT female threaded bin drain and requires an 8″ clearance for the top and sides; 5″ clearance for the back.

Compact Refrigerators and Freezers

4.3 cu. ft. Combination Refrigerator/Freezer

6.1 cu. ft. Critical Application Refrigerator

We've got what you need to keep things cool. All models have a steel cabinet with white finish and plastic liners. They have a power cord with three-prong plug and operate on 115 VAC, 60 Hz. UL listed.

Combination refrigerators/freezers have a dial control to select cool, cold, or coldest. Freezer has a manual defrost. Both come with adjustable shelves and three door shelves.

The *4.3 cu. ft. model* has three shelves. The freezer has 0.42 cu. ft. of space. Requires 2″ clearance for the top and back as well as ½″ clearance for the sides. Includes one ice cube tray and a 5½-ft. power cord.

The *5.7 cu. ft. model* has two shelves. The freezer has 0.49 cu. ft. of space. Includes two ice cube trays and a 5-ft. power cord.

Critical application refrigerator and ***critical application freezers*** are equipped with an oversized fan motor to maintain critical temperatures. They also provide fast cooling times and quick temperature recovery after the door has been opened—excellent for science and laboratory applications.

Refrigerator has two shelves, three door shelves, and an 8-ft. power cord. Also has an interior mounted control with temperature display. Monitor provides visual and audible alarms for over/under temperature, door ajar, and power failure conditions.

Freezers have a manual defrost to maintain set temperature and protect contents. The *1.5 cu. ft. model* has a 7-ft. power cord and the *4.5 cu. ft. model* has an 8-ft. power cord and one shelf.

Dishwasher Racks (NSF)

A

B

C

With their open design, these racks allow you to thoroughly wash and dry plates, trays, glasses, flatware, and even parts. They have handles on all four sides. Made of durable plastic with a double-wall construction to provide the chemical, impact, and heat resistance (up to 180° F) you need. Color is beige. NSF certified.

(A) Open rack is the choice for large or irregularly shaped items.

(B) Supporting rack has pegs to support large plates and trays. It also holds cups, glasses, and bowls.

(C) Compartment rack has 16 individual compartments to protect your glassware. Each compartment is 4⁷⁄₁₆″ square×4¹³⁄₁₆″ high.

		O'all Size, Wd.×Dp.×Ht.		Each

Airtight Plastic Storage Containers

All containers are made from FDA-compliant resins. Not rated for temperature.

(A) Airtight containers have lids that snap closed to form an airtight seal and have a hand grip. Containers are made of clear polyethylene; lids are made of white polypropylene.

(B) Airtight and watertight containers have a silicone seal and lids that snap closed on all sides. Containers can be nested without lids and stacked when used with lids. Containers and lids are made of translucent polypropylene.

Fiberglass Pans

There's nothing delicate about these heavy duty fiberglass pans—they are corrosion resistant, and they won't dent or splinter. Max. temperature is 250° F. **To Order:** Please specify color, where applicable.

Conductive pans have a surface resistivity of 10^5 ohms/sq.

Static-dissipative pans have a surface resistivity of 10^5 to 10^9 ohms/sq. The lower the surface resistivity, the faster charges are dissipated so conductive pans dissipate charges faster than static-dissipative pans.

Fiberglass Pans with Antiskid Surface

The molded-in rubber surface on these heavy duty, low-height pans provides excellent skid resistance to keep parts from sliding off the pan. They are also NSF certified and have a reinforced rim. All can be nested. Max. temperature is 212° F.

Top Outside Size, Lg. × Wd. × Ht.	Color		Each

Stain- and Stick-Resistant Plastic Pans

D *21055T48*

E *With Vented Bottom*

F

G *With Vented Bottom*

You're looking at the ultimate in impact, wear, chemical, corrosion, stain, and stick resistance. All pans are autoclavable and made of a blend of PTFE and polypropylene. They are made of FDA- and USDA-compliant resins, and are NSF certified, unless noted. Max. temperature is 250° F.

(D) Stackable Pans

All have handholds.

Top Outside Size, Lg. × Wd. × Ht.	Color		Each
20″ × 10″ × 1⅝″	White	21055T48★	$15.86
23 5/16″ × 9⅛″ × 5 5/16″	White	21055T37	29.81

★ Not NSF certified.

(E) Stackable/Cross-Stackable Pans

All have locking corners that prevent shifting when stacked. Low sidewalls allow better airflow.

Top Outside Size, Lg. × Wd. × Ht.	Color	Solid Bottom	Each	Vented Bottom	Each
30¾″ × 16¼″ × 2½″	White	21055T73	$32.34	21055T63	$32.34

Steel and Aluminum Pans

All can be nested, except Style Q.

(J&K) Clear-coat steel pans have a nonstick surface and are seamless.

(L&M) Blued-steel pans have a heavy oxide coating that offers rust and wear resistance. All pans have a rod-reinforced rim.

(N) Rectangular galvanized steel pans are seamless.

(P) Aluminized-steel pans are strong, durable, corrosion resistant, and have a nonstick surface. All have a rod-reinforced rim.

(Q-S) Aluminum pans are corrosion resistant; have a smooth, bright finish; and are seamless.

Keep-It-Cool Plastic Pans (NSF)

Keeping your cool has never been easier. Simply freeze pan for eight hours prior to use—internal gel allows contents to remain below 40° F for eight hours. All pans are NSF certified, autoclavable, and made of ABS plastic. *Optional covers* are clear acrylic. Max. temperature is 212° F. **To Order:** Please specify color: white or black.

Easy-to-Assemble Cardboard Bin Boxes

All bin boxes can be assembled easily without the need for tape, glue, or fasteners and are made of corrugated cardboard. Shipped flat. *Note:* Not rated for capacity.

Standard bin boxes have a labeling area and an inventory-control chart on the side. Two notches on the back allow the bin box to catch the shelf above it and tilt out for easy access. All have a white exterior with a tan interior. *Optional dividers* fit side-to-side, are held in position by the tension of the bin box sidewalls, and can be positioned wherever needed. Color is tan.

Tall bin boxes have a labeling area. All have a white exterior with a tan interior.

Conductive boxes have a conductive coating. Surface resistivity is 10^4 ohms/sq. and meets MIL-81705C electrostatic decay requirements. Color is black.

Nestable and Stackable Plastic Bin Boxes

E

F

(E) Nestable and stackable bin boxes are black. Made of polypropylene.

(F) Dual-access nestable and stackable bin boxes are nestable, stackable, and cross-stackable. Cross-stacking allows you to easily access contents when bin boxes are stacked. All have a molded-in label holder on both ends for easy content identification. Made of polypropylene. **To Order:** Please specify color: blue, red, or yellow. **Also Available:** Labels for bin boxes. Please ask for 1515T322.

Hangable and Stackable Plastic Bin Boxes

A lip on the back allows bin boxes to hang from rails or louvered panels. (See page 1604 for rail bin-box holders and louvered panels.) All are made of FDA-compliant polypropylene, unless noted. Optional dividers fit front-to-back and are black. Optional windows fit on the front of the bin box and are clear.

To Order: For bin boxes, please specify color: blue, red, translucent, or yellow, unless noted.

B

Extra-Wide Divided Plastic Bin Boxes

You'll get six compartments in one with these divided bin boxes. All are nestable and stackable. Use ⅜″ diameter dowel rods to stack; 12″ deep bins require two rods and 18″ deep bins require three. (See page 3618 for dowel rods.) Made of polypropylene. **To Order:** Please specify color: blue, red, or yellow.

Optional dividers fit side-to-side and are black.

Top Outside Size, Wd.×Dp.×Ht.	Inside Compartment Size, Wd.×Dp.	Cap., lbs.		Each

Optional Dividers			8544T3	$3.12

Static-Control Plastic Bin Boxes

Keep your components safe from static with these bin boxes. The antistatic bin boxes drain charges more slowly than the conductive bin boxes, which are used when static electricity needs to be drained more quickly.

Antistatic hangable and stackable bin boxes come with a lip on the back so you can hang them from a rail or louvered panel. (See page 1605 for static-control panels and racks.) All have a label holder and are made of polypropylene. Surface resistivity is 10^9 to 10^{12} ohms/sq. Color is blue. **Also Available:** Labels for bin boxes. Please ask for 1515T322.

Conductive hangable and stackable bin boxes have a lip on the back so you can hang them from a rail or louvered panel. (See page 1605 for static-control panels and racks.) Surface resistivity is 10^5 ohms/sq. Color is black. *Optional dividers* fit front-to-back and are black.

Conductive stackable bin boxes have molded-in label holders and a bar in front for stability (unless noted). Surface resistivity is 10^3 ohms/sq. Color is black. **Also Available:** Labels for bin boxes. Please ask for 4761T1.

Antistatic Hangable and Stackable

Hangable Bin Boxes Shown on a Rack

Mobile Plastic Bin Boxes

A

B

(A) Mobile stackable plastic bin box has a bar in front that adds strength and acts as a handle. It has a molded-in label holder and four swivel casters with brakes with 3″ dia. polyurethane wheels. Stacks up to four high with casters in place. Made of polyethylene. **To Order:** Please specify color: blue, red, or yellow. **Also Available:** Labels for bin box. Please ask for 17895T115.

(B) Mobile plastic bin boxes with cover are NSF certified and made of FDA-compliant resins. They have a sloped top, a clear polycarbonate cover that slides back for easy access to contents, and come with a 32-oz. scoop. All have four casters (two rigid and two swivel) with 3″ dia. rubber wheels. Made of polypropylene. Color is white.

Nestable Plastic Tote Boxes

(A) Square polyethylene tote boxes are nestable in any orientation and are made of FDA-compliant resins. Lip around the top provides handholds. **To Order:** Please specify color: blue, red, or yellow.

(B) Rectangular polyethylene tote boxes have a recessed label area and a lip around the top that forms handholds. Color is gray.

(C) Rectangular polyethylene tote boxes with anti-jamming lugs are easy to separate when nested. Lip around the top provides handholds. Color is gray.

(D) Rectangular polyethylene tote boxes with snap-on lid have handholds. Color is blue.

(E) Rectangular polyethylene tote box with spill-resistant lid has a lid with foam gasket. When used with lid, box can be used to transport hazardous material and will meet UN specification UN4H2/X10.5/S. Color is red.

(F) Rectangular polypropylene tote box has handholds and a molded-in label holder. Color is green. **Also Available:** Labels for boxes. Please ask for 1512T136.

Nestable and Stackable Tote Boxes

(G) Nestable and cross-stackable tote boxes go from nesting to stacking with a simple 90° turn. *Polypropylene* boxes are gray. *Polyethylene* boxes are made from FDA-compliant resins. Color is translucent white.

(H) FDA-compliant nestable and stackable tote boxes are made of FDA-compliant resins, have ribs under the top lip to prevent jamming when nested, and have handholds. *Optional lids* are made of polypropylene, unless noted. **To Order:** Please specify color for tote boxes and lids: blue, gray, or red, unless noted. *Note:* The red boxes are not FDA compliant.

(J) Nestable and stackable tote boxes compatible with 48″×40″ pallets are nestable in one direction and stackable when turned in the opposite direction. All have handholds. *Optional lids* are made of polypropylene. **To Order:** Please specify color: blue, red, or yellow.

(K) Nestable and stackable tote boxes with built-in label holder and compatible with 48″×40″ pallets are nestable in one direction and stackable when turned in the opposite direction. All have handholds. When paired with an *optional lid,* boxes can be used for shipping. *Polypropylene* boxes have a recessed bar code area.

To Order: Please specify color: blue, red, or yellow.

Also Available: Labels for boxes. For labels for polypropylene boxes, please ask for 1515T336. For labels for polyethylene box, please ask for 4311T12.

Plastic Tote Boxes with Hinged Lids

Solid Color

Translucent

All boxes have lids that interlock and are attached to boxes with metal hinges. A ⅜″ dia. hole allows you to secure lids with a wire seal or cable tie (not included). All are nestable when lids are open, and are stackable when lids are closed. They have handholds and are made of FDA-compliant resins, except the red models. All are compatible with 48″×40″ pallets, unless noted; 21 13/16″ long boxes are also compatible with 48″×45″ pallets.

Solid color boxes are made of polyethylene. **To Order:** Please specify color: blue, gray, or red, unless noted.

Translucent boxes are made of polypropylene.

■ Sides with handholds are solid.

Vented Nestable and Stackable Plastic Tote Boxes

(A) Standard tote boxes are FDA compliant. Vented sides and bottom allow easy draining. Made of polyethylene. 3642T22 features handholds, reinforced sides for added strength, and a smooth interior for easy cleaning. 3642T41 and T42 have handholds.

(B) Stain- and stick-resistant tote boxes are the ultimate in impact, wear, chemical, corrosion, stain, and stick resistance. All are NSF certified, made of FDA-compliant resins, and have handholds. Sides and bottoms are vented. Made of a blend of PTFE and polypropylene.

(C) Heavy duty chemical-resistant tote boxes are made of reinforced fiberglass so they are lightweight and strong. They also resist most chemicals, solvents, and oils. All have handholds and are compatible with both 48″×40″ and 48″×45″ pallets. **To Order:** Please specify color.

Create-Your-Own Compartmented Plastic Tote Boxes

Create a tote box with the perfect number of compartments—simply choose the box and number of dividers you need. The dividers fit into molded slots in the boxes and intersect so you can have compartments as small as 1⅛″ square, unless otherwise indicated.

(D) Polyethylene tote boxes have gray dividers; lids are clear. **To Order:** For boxes, please specify color: blue, gray, or red.

(E) Conductive polypropylene tote boxes provide protection from electrostatic fields when used with lid. Surface resistivity is a maximum 105 ohms/sq. Boxes, dividers, and lids are black.

Plastic label holders are 7¾″×4¼″ and snap onto divider boxes. Maximum label size is 7½″×3½″. **Also Available:** Labels for bin boxes. Please ask for 17895T118. Label size is 5″ Wd.×3″ Ht.

Collapsible Large-Capacity Containers

Container without Casters

Containers collapse to save valuable storage space. All are made of zinc-plated steel and have four-way forklift entry. *Containers without casters* can be stacked four high, except 32″ Lg. × 20″ Wd. containers, which can only stack three high. *Containers with casters* have two rigid and two swivel casters with 4″ dia. phenolic wheels, except for the 32″ Lg. × 20″ Wd. containers, which have 3 1/2″ dia. phenolic wheels. *Note:* Do not stack containers without casters on containers with casters.

Static-Control Plastic Boxes with Foam

With Clear Lid

Don't let static buildup ruin sensitive parts. Boxes are black with a clear or black lid.
With Clear Lid— The box and foam have a surface resistivity of $<10^5$ ohms/sq.; the lid does not.
With Black Lid— The box, lid, and foam have a surface resistivity of $<10^5$ ohms/sq. Meet Mil. Spec. B-81705-C.

Compartmented Boxes with Handle

Steel Box

Plastic Box with One Compartment

Plastic Box

Plastic Box with Compartments on Both Sides

Steel boxes have a plastic-lined lid and plastic lift-out bin cups. Color is blue.
Plastic boxes and lids are opaque gray, unless noted. *Boxes with adjustable compartments* have dividers, so you can create the number and size of compartments you need. *Box with adjustable compartments on both sides* has nine fixed compartments on each side.

Sand Bags

Rectangular

Tubular

Polypropylene sand bags come in two shapes. *Rectangular* are UV treated for extended life and have built-in polypropylene ties. *Tubular* is laminated with polyethylene, and is oil, tear, puncture, and water resistant. Ties not included.

Burlap sand bag is mildew resistant and has built-in polypropylene ties.

Polyethylene sand bag is made of three layers of reinforced polyethylene. Bag is tear resistant and will withstand extreme outdoor heat for 3-5 years. Ties not included.

Note: Sand not included.

Wire ties are plastic coated and come on a 1,500-ft. spool so you can cut the length you need. Spool OD is 8¼″ with a 1″ dia. center hole for mounting.

About Choosing the Proper Size Garbage Bags

If You Know the Gallon Size of Your Container— Simply match the gallon size of your container to the gallon capacity size listed in each bag presentation. If the exact gallon capacity of your container is not listed, choose a larger size.

If You Don't Know the Gallon Size of Your Container— Calculate the bag circumference and height (see below) that are required to fit your container. If the exact size is not listed, choose a larger size.

For Round Containers

Bag Circumference Required—Multiply your container's diameter by 3.14.

Bag Height Required—Take the height of your container, add ½ of your container's diameter, and then add 2″ (for overhang).

For Square or Rectangular Containers

Bag Circumference Required—Add all four side measurements together.

Bag Height Required—Take the height of your container, add ½ of your container's shortest width, and then add 2″ (for overhang).

Garbage Bags

Our best multipurpose garbage bags are designed to stretch, resist tearing, and handle items with sharp edges. They even have specially sealed ends, which make them virtually leakproof. All are made of low-density polyethylene and come furnished with twist ties. **To Order:** Please specify color: black or clear.

Economy Garbage Bags

Perfect for office environments, these bags not only handle lightweight waste and paper, but are also strong enough for wet, bulky items. They are not, however, recommended for containing items with sharp edges.

All of these bags are made of high-density polyethylene. They're strong, but not very thick, which means less impact on the environment. All bags have specially sealed ends, which make them virtually leakproof. Twist ties are not included. **To Order:** Please specify color: black or clear.

Large-Volume Bags

Shown as a Pallet Cover

Shown as a Pallet-Box Liner

The extra-large size makes it easy to cover, store, or dispose of large items. Bags fit pallet loads up to 53″ Wd. × 43″ Dp. They can also be used as liners for large-sized pallet boxes (also known as gaylord boxes). All are made of flexible, low-density polyethylene. Bags sold on rolls are perforated for easy removal. Twist ties are not included.

Standard Bags— Color is clear.

UV-Resistant Bags— The choice for temporary outdoor storage, these bags are UV resistant for up to six months. Color is black.

Wall-Mount Plastic Indoor Waste Containers

Mounted on the wall, these rectangular containers increase your usable floor space. They're also easier to clean around than floor containers. Both are made of lightweight polypropylene with molded-in hooks for holding a liner. The top, which lifts off for easy trash removal, is made of polystyrene and has a self-closing push door.

Containers have a built-in mounting bracket with two keyhole slots (fasteners included). When wall mounted, they're FM approved and California State Fire Marshal (CSFM) approved.

Cap., gal.	Overall Size Wd.×Dp.	Ht.	Circum.	Color		Each
15	19½″×11⅞″	32⅝″	63″	Beige	4571T33	$142.99
15	19½″×11⅞″	32⅝″	63″	Brown	4571T34	142.99

Step-Open Plastic Indoor Waste Containers

You don't need a free hand to open the lids on these containers—just step on the convenient foot pedal. Made of polyethylene, all resist dents and chips. They're also easy to clean. FM approved and California State Fire Marshal (CSFM) approved.

To Order: Where applicable, please specify color.

Round container comes furnished with a rigid polyethylene liner.

Mobile rectangular container has a polyethylene roller for portability.

★ Made of polystyrene.

Metal Indoor Waste Containers

A B C D E F G H J K

Made of metal, all of these waste containers provide better fire protection than comparable plastic containers. **To Order:** Where applicable, please specify color.

Fire-resistant waste containers (A&B) have a raised bottom, which insulates and protects floors from heat transfer. They will not contribute fuel to a fire and will not burn.

Fire-extinguishing waste containers (C-G) are designed to extinguish internal fires by restricting the oxygen flow inside.

(A&B) Fire-Resistant Steel—*Round containers (Style A)* are seamed and have rolled tops, which enclose a reinforcing wire. Embossed sides add extra strength.

Rectangular containers (Style B) have vinyl bumpers to protect your walls and nylon glides to protect your floors.

(C) Fire-Extinguishing Steel with Aluminum Funnel Lid—Containers have a steel body and separate brushed aluminum lid that lifts off for easy trash removal. The lid has a funnel-shaped opening, which directs trash into the container. The interior is coated with a rust preventative.

(D) Fire-Extinguishing Steel with Push-Door Top—Containers have a one-piece steel shell with a self-closing 300 series stainless steel push-door top. To empty, lift off the shell to expose the liner, which is made of galvanized steel. Both containers have a noncorrosive Type 304 stainless steel ring at the base to protect your floors.

(E) Fire-Extinguishing Steel with Push-Door Lid—This container has a steel body and separate steel lid that lifts off for easy waste removal. The lid has a self-closing 300 series stainless steel push door.

(F) Fire-Extinguishing Steel and ***Type 304 Stainless Steel with Swing Lid—***All have a self-closing swing door. They also have rubber bumpers to protect your walls; nonmarking feet to protect your floors.

Steel containers have a separate lid that lifts off for easy waste removal. *Stainless steel containers* have a hinged lid that flips open for easy trash removal.

(G) Fire-Extinguishing Type 304 Stainless Steel with Double Push-Door Lid—Made of brushed stainless steel, these containers have a separate lid that lifts off for easy trash removal. For added convenience, the lid has two self-closing push doors. Vinyl bumpers protect your walls; nonmarking nylon feet protect your floors.

(H) Aluminum with Open Domed Top—Containers have a one-piece satin-finished aluminum shell with a clear finish. To empty, lift off the shell to expose the liner, which is made of galvanized steel with an aluminum bottom. Both containers have a noncorrosive vinyl ring around the trash opening.

(J) Space-Saving Steel with Side Opening—The half-round design hugs your wall to save floor space. Container has a one-piece steel shell. To empty, lift off the shell to expose the liner, which is made of polyethylene. In addition to a noncorrosive vinyl ring around the trash opening, there's a noncorrosive Type 304 stainless steel ring at the base to protect your floors.

(K) Steel with Lockable Lid for Confidential Documents—A curved chute prevents retrieval of sensitive documents until disposal time. Even turning this container upside down won't allow the contents to slide out. To empty, you must unlock the hinged lid and flip it open.

Container is made of steel with vinyl bumpers to protect your walls and nonmarring rubber feet to protect your floors. Lid has a steel padlock hasp for use with a padlock (not included; maximum shackle dia. of ½″).

Wall-Mount Stainless Steel Indoor Waste Containers

Mounted on the wall, these rectangular containers increase your usable floor space and are easier to clean around than floor containers. All are made of Type 304 stainless steel and have four ⅜″ × 3/16″ keyhole slots for mounting (fasteners not included).

The *7-, 12-,* and *17-gallon models* include a reusable vinyl liner.

Step-Open Metal Indoor Waste Containers

A

B

C

D

You don't need a free hand to open the lids on these containers—just step on the convenient foot pedal. Made of metal, all are fire extinguishing (except for *Style B*), which means they are designed to extinguish internal fires by restricting the oxygen flow inside. **To Order:** Where applicable, please specify color.

Style A—Containers have a galvanized steel liner. They also have a vinyl ring at the base to protect your floors.

Style B—Container has a one-piece steel shell with a self-closing stainless steel push door. To empty, lift off the shell to expose the liner, which is made of galvanized steel. There's a noncorrosive stainless steel ring at the base to protect your floors.

Styles C and ***D***—Containers have a rigid plastic liner. They also have a mechanism on the lid to keep the lid from hitting your walls and feet with rubber glides to protect your floors.

Style D also has a handle and two 3″ dia. rubber wheels for mobility.

No-Touch Indoor Waste Containers

Stainless Steel, Rectangular

You don't have to touch or step on these containers to open the lid—a sensor on the front detects motion up to 10″ away and triggers opening. The lid closes automatically after six seconds. To disable the automatic function, simply flip a switch. All operate on four D batteries (not included).

Fire-Extinguishing Plastic Indoor/Outdoor Waste Containers

Round

Square

Made of structural polyethylene, these containers withstand indoor and outdoor temperature extremes. They're also fire extinguishing, which means they are designed to extinguish internal fires by restricting the oxygen flow inside. **To Order:** Please specify color.

Round with Push-Door Lid—Containers have a separate lid, which has a self-closing push door and lifts off for easy waste removal. They also have a built-in garbage bag holder.

Square with Double Push-Door Lid—Containers have a hinged lid that flips open for easy trash removal. For added convenience, the lid has two self-closing push doors.

Plastic Outdoor Waste Containers

All Plastic

Plastic Frame with Stone Panels

Able to stand up to the elements, these durable, square containers have hooded tops to protect the interior from wind, rain, and snow. The tops have openings on all four sides and are hinged so you can flip them open for easy trash removal.

All Plastic—Made of polyethylene, this container has a weighted pedestal base that you can fill with sand, gravel, or water for stability. It comes furnished with a garbage-bag holder. An optional polyethylene liner is sold separately. *Note:* This container can be used with fully automated collection systems.

Plastic Frame with Stone Panels—Not only tough, but also good looking, these containers have a dent- and chip-resistant ABS plastic frame and attractive stone panels. They come furnished with a garbage-bag holder and a polyethylene liner. **To Order:** Please specify frame and stone panel color.

Plastic Indoor/Outdoor Waste Containers, Lids, Dollies, and Caddies

Made of polyethylene (unless noted), the containers, lids, dollies, and caddies are sold separately. **To Order:** Where applicable, please specify color.

Waste Containers

All of these containers have two molded-in side handles (unless noted) and a durable bottom that stands up to dragging across rough surfaces. Containers of the same size and shape can be nested for convenient storage.

Blue, gray, white, and ***yellow containers*** are NSF certified. ***Gray, white,*** and ***yellow containers*** are also USDA listed.

Recycling Waste Containers— Have a recycling imprint on the side.

Jumbo Waste Containers— Accommodate generous amounts of trash. They have two steel handles and a steel ring inside the top rim for added stability. No lids are available.

Mobile Plastic Indoor/Outdoor Waste Containers

A 32 gal.

A 45 gal.

B 35 gal.

C 50 gal.

D

E

Shown with a garbage bag and 23-gal. container (not included).

Two wheels make it much easier to move these containers—especially when they're full. Made of molded polyethylene, the containers are not only crack and dent resistant, but also lightweight, seamless, and leak-proof. Wheels are polyethylene, unless noted. **To Order:** Where applicable, please specify color.

(A) Waste Containers with Removable Lid— The *32-gal. model* has two side handles that lock the lid in place. The *45-gal. model* has a large molded handle on top of the lid and a hand grip on the back of the container for easy maneuvering.

(B-D) Waste Containers with Hinged Lid— All have a hinged lid and a molded handle for a sure grip. *Note:* These containers work with both fully and semi-automated collection systems, unless noted.

(C) Recycling waste containers with hinged lid have a recycling imprint on the front.

(D) Waste container with lockable hinged lid and paper slot is great for securing your confidential paper waste. The lid has a key lock (furnished with two keyed-alike keys) and paper slot to restrict access to contents.

(E) Large-Capacity Waste Container— Our largest-capacity waste container allows you to separate your waste. It has a 55-gal. garbage-bag retainer hoop, a molded-in area that can accommodate a 23-gal. waste container (sold separately), and a storage area for holding and organizing your cleaning supplies. It also has two rear handles and two outward-opening rear doors for easy access to container contents. In addition to the two wheels, this container has two swivel casters with 5″ dia. plastic wheels to make maneuvering in tight spots a breeze. An *optional polyethylene lid* is sold separately below.

Metal Outdoor Waste Containers

F

G

H

J

K

Styles F-H— Made of galvanized steel for good corrosion resistance, these economical containers have a steel-rod-reinforced top edge for dent resistance as well as corrugated walls for rigidity and durability. Same-size containers can be nested for convenient storage.

Hot-dipped galvanized steel container (noted with a ♣) provides extra leak and corrosion resistance.

Style H has a dome lid with self-closing push door. The lid is made of 22-ga. steel.

Styles J and ***K—*** The open-mesh design provides good ventilation and allows you to see the contents so you know when the containers need emptying.

Style J have top and bottom circular rod frames that are connected to three vertical rods for strength. They also have legs to keep contents off the ground.

Style K mounts to a wall as well as a 2″ dia. to 12½″ dia. pole (with optional strapping kit) to keep garbage up and out of the way. For easy waste removal, there's a hinged bottom with a padlock hasp that can be locked with a padlock (not included; max. shackle dia. of 5/16″) to prevent vandalism. Furnished with two 3/8″ dia. holes for wall mounting (fasteners not included) and two 1″ long slots for pole mounting (Type 304 stainless steel strapping kit sold separately). **To Order:** Please specify color.

Waste Containers for Needles and Blades

Also known as sharps containers, these rectangular containers are for disposing of needles, razor blades, and other sharp objects. All are made of rigid, puncture-resistant polypropylene and are tapered for nesting. For single use only, the exterior can be sterilized with steam (autoclaved). Color is red.

When full, properly dispose of container and contents. *Note:* Not for disposal in landfills.

Waste-Container Drum Covers

Turn your steel drum into a covered waste container by adding one of these covers. **To Order:** Where applicable, please specify color.

Style A have a funnel-shaped opening, which directs trash into the drum.

Style B are hinged and have a cover stop. The stop does not allow the covers to stay open unless you hold them open.

Styles D and ***H*** include thumb screws for fastening the covers to drums.

Style J is fire extinguishing when used with a steel drum. At 165° F, the fusible link melts to automatically drop the cover to snuff out a fire within. Includes a nut and bolt strap assembly for fastening the cover to a drum.

Recycling Containers

Make recycling convenient.

Polypropylene Tote— Two or more of these rectangular containers can be nested for convenient storage.

Vinyl Bag and Steel Stand— Pair a bag with a stand (each sold separately) to collect recyclables. The *bag* has a drawstring closure. The *stand* is made of rust-resistant steel rod and folds for storage and portability.

Fiberboard Containers with Lid— Made from 50% recycled material, these square containers are lightweight, durable, and reusable. They are shipped flat and can be quickly assembled. *Optional clear garbage bags* (sold separately) can be used as liners. The bags are 2.0 mils thick.

Recycling Can Crushers

Wall-Mount Can Crusher

Can Crusher with Container

Easily crush standard aluminum cans for space-saving storage. To use, simply place your aluminum can in one of these crushers and pull the handle down.

Wall-Mount Can Crusher—Made of steel, this crusher is 3¼″ Wd. × 8″ Ht. and has a 12″ long lever-style handle with comfortable foam grip. Color is gray with a black handle. Mounting hardware is included.

4009T1 ..... **Each** $10.91

Can Crusher with Container—This aluminum can crusher is furnished with a 30-gal. rectangular container that holds more than 400 crushed cans. Once you have crushed a can in the crusher, it conveniently drops directly into the container. Made of polyethylene, the can crusher is black and the container is beige. Overall size is 33″ Ht. × 16″ Wd. × 22″ Dp.

9868T5 ..... **Each** $99.82

Collapsible Waste Containers

Container Collapsed Down to 1½″ High

Open these handy containers when you need them and then collapse them down to 1½″ high when you don't for compact storage. Made of durable woven polyethylene, containers have a heavy duty steel spring, which provides support while they are in use. They also have handles for portability.

Indoor Cigarette Disposal Containers

Wall-Mount Rectangular Butt Containers with Slogan

Made entirely of steel, these containers are available with your choice of slogan (see below). All hold 20 ounces of sand (sold separately on this page) and have two keyhole slots that allow you to lift them off the wall for quick and easy emptying. The slots accept No. 5 screws (not included) for mounting.

Model 4968T17 is also furnished with a spring for holding cigarettes.

Available Slogans:
1—Smokers, Help Prevent Fires, Snuff Out Your Butts Here!
2—Smokers, Help Keep Our Place Clean, Snuff Out Your Butts Here!
3—Smokers, Help Keep Our Place Clean, Park or Snuff Your Butts!
4—No Smoking Beyond This Area, Snuff Out Your Butts Here!

Outdoor Cigarette Disposal Containers

Keep unsightly cigarette butts out of plain view with these outdoor butt-concealing containers.

Wall-Mount Self-Extinguishing Butt-Concealing Container

Snuff out your cigarettes on the container screens and then drop them in. Containers are specially designed to limit the flow of oxygen, so cigarette butts are quickly extinguished and the risk of fire is reduced.

Made of Type 304 stainless steel with a removable galvanized steel liner, this rectangular container has a hinged key-lock cover for easy emptying and vandal resistance. It comes furnished with one key (multiple containers open with the same key).

Container helps you comply with the Americans with Disabilities Act when properly installed. Mounting hardware included.

Overall Size, Ht. × Wd. × Dp.	Butt Opening, Ht. × Wd.		Each
12½″ × 10″ × 3″	1 13/32″ × 1½″	9647T11	$129.98

Self-Extinguishing Butt-Concealing Containers

Polyethylene

Steel

Aluminum

The long neck limits the flow of oxygen, so cigarette butts are quickly extinguished and the risk of fire is reduced. A broad base provides stability and prevents spills.

Polyethylene—The base has a lift-off top and removable galvanized steel pail for easy emptying. **To Order:** Please specify color: beige, black, gray, or green.

Steel—FM approved as fire safe and self extinguishing. The top and the base are connected with a nickel-plated brass chain and have Type 304 stainless steel latches to form a tight seal. The base also includes nylon glides. **To Order:** Please specify color: black or bronze.

Optional anchor kit includes a ¼″ Dia. × 1″ Lg. steel lag screw with ¼″ Dia. × 1″ Lg. steel lag anchor and washer for permanent placement as well as theft resistance.

Aluminum—For modern good looks, these containers have a simple streamlined design. The top lifts off the base for easy emptying. **To Order:** Please specify color: black or silver.

	Overall Size, Base Dia. × Ht.	Butt Opening		Each
Polyethylene	16½″ × 38½″	11½″ Dia.	5171T6	$44.85
Steel	16″ × 37½″	11¼″ Dia.	6683T2	172.59

Black Sand	25 lbs. (2-gal. Pail)	4086T13	$43.56
White Sand	25 lbs. (2-gal. Pail)	4086T14	43.56
Zinc-Plated Steel Sand Sifter	16″ Lg.	4086T27	40.32

Aerosol Can Recycling System

Turn your aerosol cans into recyclable scrap metal. This system safely punctures aerosol cans to relieve the pressure. A combination filter then filters VOCs and removes odors and harmful emissions from residual gas, and returns residual liquids to your drum. This exempts cans from disposal regulations for hazardous waste. Works on almost any size aerosol can, including 3″ dia. jumbo cans.

To use, thread the puncturing unit directly onto the 2″ dia. opening of a 30- or 55-gallon drum (not included). Then thread the combination filter with replaceable carbon cartridge onto a 3/4″ opening of the drum. Insert your can and push the lever to puncture.

System is made primarily of aluminum and measures 15″ high. It includes safety goggles and a 6-ft. long antistatic wire with a ring terminal, which prevents static buildup by grounding the drum as required by OSHA.

		Each
Complete System	41275T51	$712.21
Replacement Parts		
Combination Filter with Carbon Cartridge	41275T52	172.59
Carbon Cartridge	41275T53	103.91
Can Gasket for Puncture Unit	41275T55	9.58

Air-Powered Pail, Can, and Filter Crusher

Crush quart, gallon, and five-gallon pails and cans as well as oil filters to less than 20% of their original height in under two minutes. *Note:* Not recommended for high-density polyethylene pails and cans.

To use, simply connect this crusher to any compressed air source with an 85-115 psi range. With the touch of a button, you'll get up to 13,000 pounds of force at 100 psi. Crusher uses 9 cfm of air at 100 psi. Air inlet connection is a 1/4″ NPT female fitting.

Crusher is constructed primarily of steel. For safety, it will not operate unless the door is closed. The inside chamber size is 12″ Dia.×15″ Ht. The bottom is recessed with a drain and hose to allow liquid waste disposal. Ram stroke is 14″. Color is red.

	Overall Size, Ht.×Wd.×Dp.		Each
Crusher	44″×22″×21″	41145T51	$2,922.84
Optional Steel Floor Stand	36″×22″×30″	41145T52	154.38

Combination Trash Compactor/ Drum Crusher

As a crusher, this machine uses 38,000 pounds of force to crush 55-gallon drums down to about 6″ in only 25 seconds. As a compactor, it compresses the contents inside the drum. To convert this machine from a crusher to a compactor, all you have to do is remove the drum-crushing plate.

All moving parts are completely enclosed. Safety features include a red emergency stop button, a pressure-relief valve to prevent overload, and a mechanism that prevents the motor from running if the door is unlocked. Compactor/crusher also has built-in 7 5/8″ Wd.×2 5/8″ Ht. forklift channels.

Constructed of steel, this compactor/crusher has a compaction ratio of up to 6:1. It has a 6.5-hp, 208-230/460 VAC, 60 Hz, 3-phase motor and a keyed on/off switch. The hydraulic system operates on 3,000 psi and has a 15-gallon oil reservoir. A hardwire electrical connection is required.

Inside chamber size is 37″ Ht.× 25″ Wd.×25″ Dp. Ram stroke is 36″. Color is blue. Push-button controls meet NEMA 4 standards. Compactor/crusher meets OSHA and JIC (Joint Industrial Council) standards.

Optional Drip Pan—This aluminum pan fits under the compactor/crusher to collect any liquid waste remaining in the drums.

	Overall Size, Ht.×Wd.×Dp.	Ram Plate Dia.		Each
Crusher/Compactor	95″×36″×40″	21″	44565T12	$8,248.55
Optional Drip Pan	3″×30″×20″	—	44565T14	169.05

Manual Trash Compactor

Compact trash the economical way. With no need for fuel or electrical power, this manual compactor can be used anywhere—on job sites or in the plant.

Constructed of steel, this compactor has a compaction ratio of up to 4:1. Just pull the ratchet handle down to compact trash in a 55-gallon drum (not included) with up to 4,000 pounds of force. The handle is 26″ long. Ram stroke is 35″. Color is red.

Overall Size, Ht.×Wd.×Dp.	Ram Plate Dia.		Each
90″×29″×27″	20″	40245T23	$840.04

Air-Powered Trash Compactor

In just one minute or less, this powerful compactor can easily compact trash in a 55-gallon drum (not included). To use, just connect to any compressed air source with a 70-150 psi range and get ready to unleash 2,600 pounds of force at 100 psi and up to 4,000 pounds of force at 150 psi. Compactor uses 8 cfm of air at 100 psi. Air inlet connection is a 1/4″ NPT female fitting.

Constructed of steel, this compactor has a compaction ratio of up to 4:1. It operates with a two-handed safety lever that's designed to keep your hands and face away from the drum. The handle is 46″ long. Ram stroke is 24″. Color is red.

Overall Size, Ht.×Wd.×Dp.	Ram Plate Dia.		Each
76″×36 1/2″×27″	20″	40585T12	$3,157.63

Glass Crusher

This machine provides an efficient way to crush glass, while saving you money on waste removal and handling costs. It breaks glass containers up to one gallon in volume and up to 8″ in diameter for an 80% size reduction. Unit crushes as fast as you can feed it.

Crusher is steel and has an aluminum barrel cover designed to fit on top of either a 30- or 55-gallon steel drum (not included). A window lets you see when the drum is full. The crushing impeller is made of hardened steel for maximum wear resistance.

Unit is powered by a totally enclosed 1/2-hp, 115/230 VAC, 60 Hz, single-phase motor and has an 8-ft. cord with three-prong plug.

Chute has an 8 1/4″ square opening that is 21″ long. Height of crusher from bottom of barrel cover to top of chute is 25 1/2″. Height when placed on a 55-gallon drum is about 61″.

Note: Do not use for crushing fluorescent tubes.

5003T13 ..... **Each** $1,397.33

Rooftop Disposal Chutes

To direct trash into your dumpster and reduce the danger of flying debris, use these trash chutes for roofing, demolition, and other job-site work. Made of tough orange polyethylene, they set up in just minutes.

Chutes are tapered and can be used on buildings from one to ten stories high. To assemble, simply hook the chute sections together with the included support chains, hoist them to roof level, and secure them to the building with strapping (not included). Chutes are easy to disassemble and can be flattened for storage.

Optional Hopper—This hopper is designed to funnel trash into the 18″ dia. chute. It's made of PVC and measures 37″ square with an approximately 14″ dia. hole.

Chute Size		Each
18″ Dia.×4-ft. Lg.	4986T42	$124.56
30″ Dia.×4-ft. Lg.	4986T43	132.20

About Gloves

Glove Sizing

To determine your glove size, wrap a tape measure around your palm as shown. This number in inches, and the corresponding letter code below it in the chart, is your glove size. Gloves are listed in men's sizes, unless noted.

Size, in.	6-7	7-8	8-9	9-10	10-11	11-12
Men's	XS	S	M	L	XL	XXL
Women's	S	M	L	XL	____	____

Glove sizes are listed in alpha (S, M, L) or numeric (7, 8, 9) based on manufacturer's labeling. Length is measured from the tip of the middle finger to the end of the glove.

Thickness is measured in mils (1 mil = 0.001″). Thicker materials are more durable for longer life; thinner materials offer better dexterity.

Finger cot sizes are based on their respective glove size.

Glove Surfaces

Smooth— Provide the best dexterity.

Textured— Ridges or pebbles on the surface allow a better grip.

Rough— Texture is similar to sandpaper. Ideal for handling slippery objects.

Glove Linings

Unlined Gloves— Offer the best dexterity because there is less of a barrier between your hand and the material you are working with.

Lined Gloves— Provide comfort by absorbing perspiration. Linings also make gloves easier to pull on and off. *Flocked gloves* have a very thin coating of fibers that form the lining. *Knit linings* have a distinct layer of fabric but still offer good dexterity. *Jersey linings* have a thicker layer of fabric than knit linings and offer better heat and cold protection.

Glove Wear

Inspect all gloves prior to each use and wash to remove chemicals prior to storing. Disposable gloves should only be considered for incidental chemical contact.

Disposable Gloves

ⓘ For additional information about the chemical compatibility of these gloves, go to mcmaster.com and search for **5306TAC.**

Disposable Gloves

For the dexterity and sensitivity needed for intricate work, choose these gloves. All gloves are ambidextrous and conform to your hand, unless noted. They're made from materials that comply with FDA regulations for food contact, unless noted. *Lightly powdered* gloves are easier to pull on and off. *Powder-free* gloves are better for applications where particulate contamination is a concern.

Latex (natural rubber) gloves have excellent elasticity. ***PVC (polyvinyl chloride)*** gloves combine strength with chemical resistance. ***Nitrile*** gloves are a good alternative if you have concerns about latex allergies. These gloves have the best chemical resistance of all the disposable gloves we offer. ***Polyethylene*** gloves are economical and commonly used in food preparation. They are the thinnest disposable gloves we carry and don't conform to your hand.

Disposable Finger Cots

Ideal when gloves are too restrictive, these cots provide finger protection while allowing unlimited hand movement. They also minimize contamination from body oils, salts, and particulates.

Latex (Natural Rubber)— Use for general personal and product protection.

Nitrile Antistatic— A good choice if latex allergies are a concern. Surface resistivity is 10^9 ohms/sq.

To Order: Please specify size.

Finger Cot Dispenser— Keeps cots clean and ready to use. It's made of white acrylic with a clear lid and mounts on a table or wall. It has two ⅛″ dia. holes for wall mounting (fasteners not included). Holds approximately 1500 cots. Size is 13″ Ht.×6″ Wd.×8″ Dp.

Finger-Protection Tape

Protect as small or large a part of each finger as needed. This self-adhesive gauze allows maximum sensitivity, dexterity, and grip. Tape bonds only to itself and will not stick to skin, hair, or clothing. Use to avoid cuts, burns, and abrasions.

Cotton with Latex (Natural Rubber)— Open-mesh design is water resistant and allows the skin to breathe.

To Order: Please specify color: blue, green, tan, or white.

Latex-Free Vinyl— Waterproof and ideal where latex allergies are a concern. Color is pink.

Disposable Sleeves

Designed for one-time use, these sleeves cover the arm from the wrist to past the elbow. Sleeves can be combined with gloves for complete arm protection. Elastic at both ends provides a secure and snug fit. One size fits all. ***Polyethylene*** sleeves are more economical than vinyl, but ***vinyl*** sleeves provide better protection against chemicals and abrasion.

Clean Room & Acid-Resistant Gloves

For information about gloves and sizing, see page 1766.

For additional information about the chemical compatibility of these gloves, go to mcmaster.com and search for **5306TAC**.

Clean Room Disposable Gloves

Packaged in a clean room environment, these powder-free, unlined gloves prevent contamination of your work. *Class 100* gloves are packaged in a clean room containing fewer than 100 particles larger than 0.5 microns in each cubic foot of air space. *Class 10* gloves are packaged in a higher-rated clean room containing fewer than 10 particles larger than 0.5 microns in each cubic foot of air space.

Standard— *Latex (natural rubber)* gloves have excellent elasticity and conform to the hand. *PVC (polyvinyl chloride)* gloves are antistatic and chemical resistant. All are ambidextrous.

Heavyweight— Thicker than standard gloves and can last longer depending on your application. *Nitrile* gloves provide chemical protection and superior abrasion, cut, and puncture resistance. *Tri-polymer* gloves combine latex, neoprene, and a nitrile blend to offer durability, comfort, and chemical resistance.

To Order: Please specify size.

Acid-Resistant Latex Gloves

Latex (natural rubber) gloves provide good strength, dexterity, and chemical resistance. They resist most acids, alcohols, and animal fats. All blue gloves and 5306T55 are made from materials that comply with FDA regulations for food contact. ***Premium*** gloves are more durable than standard gloves.

To Order: Please specify size.

★ Mil thickness is approximate on gloves with a knit lining.

Acid-Resistant Nitrile/Latex Gloves

In addition to dexterity and abrasion resistance, these latex (natural rubber) gloves offer an added layer of security. The hands of these green gloves are dipped in a blue-colored nitrile for strength. When the blue coating wears off to reveal green, it's time to replace the gloves. They resist acids, alkalies, fats, and grease. Made from materials that comply with FDA regulations for food contact.

Oil- and Acid-Resistant Nitrile Gloves

Unlike latex (natural rubber), nitrile acts as a barrier to oil and petroleum products. These gloves resist solvents, some acids, and abrasion. They're made from materials that comply with FDA regulations for food contact. **To Order:** Please specify size.

Oil- and Acid-Resistant Neoprene Gloves

Thicker than most nitrile gloves, these neoprene gloves last longer in comparable service. They protect your hands from alcohols, acids, and oils and are made from materials that comply with FDA regulations for food contact, unless noted. Color is black.

Neoprene—31″ long gloves have a 5/16″ dia. brass grommet on each sleeve that allows you to tie them across your shoulders.

Double-Dipped Neoprene— These gloves have an additional coating for added safety. When the inner color shows through, it's time to replace the gloves. **To Order:** Please specify size.

Oil- and Acid-Resistant Neoprene/Latex Gloves

Neoprene and latex (natural rubber) give these gloves flexibility and comfort. They're an economical alternative to all-neoprene gloves but still provide acid and oil resistance. Made from materials that comply with FDA regulations for food contact, unless noted.

Neoprene-coated latex gloves have an additional coating for longer life. 5409T11 gloves have a blue inner color. When the blue shows through, it's time to replace the gloves.

Vapor- and Chemical-Resistant Butyl Gloves

Butyl offers the highest impermeability to gas and water vapors of any material we carry. These unlined gloves provide superior protection, especially when dealing with MEK (methyl ethyl ketone), acetone, and esters such as tricresyl phosphate and ethyl acetate. **To Order:** Please specify size.

Ultra-Thin Chemical-Resistant Gloves

Thin enough to wear as a liner or over other gloves, these silver-film gloves are an excellent choice for spill cleanups, hazardous control operations, and chemical and petrochemical laboratories. They resist aromatic, chlorinated, and oxygenated (ketones and alcohols) solvents as well as esters. Gloves are ambidextrous.

High-Strength Solvent-Resistant Fluoroelastomer Gloves

These fluoroelastomer gloves are designed to handle water-based solutions, chlorinated solvents, aromatic solvents, and other toxic substances that degrade rubber, neoprene, nitrile, and PVC (polyvinyl chloride). Ideal for use in industrial maintenance as well as chemical and degreasing operations. Gloves are unlined and have a smooth surface.

To Order: Please specify size.

Thick., mils	Lg.	Color	Available Sizes		Per Pair

20	12″	Black	8,9,10	5604T41	81.75

Solvent-Resistant PVA Gloves

Perfect for protection from oil-based solvents. Rugged PVA (polyvinyl alcohol) coating resists ketones, acetones, and petroleum-based degreasing solvents. Not designed for use in water-based or alkali-based degreasing products. Gloves have a smooth surface and a jersey lining for added comfort.

Thick., mils	Lg.	Color	Size		Per Pair 1-3	Per Pair 4-Up
40	12″	Red	10½	5258T21	$26.83	$25.58

40	17″	Red	10½	5258T23	30.00	28.57

Abrasive Blasting Gloves

The combination of neoprene and vinyl provide the protection you need when working in abrasive-blasting cabinets. These gloves have a cotton lining.

For Hole Dia.	Thick., mils	Lg.	Color	Size		Per Pair
6″	38	24″	Black	One Size	55405T22	$25.28
7″	38	33″	Black	One Size	55405T23	37.02

Chemical-Resistant Sleeves

For abrasive material, oils, and most acids, choose these thick nylon sleeves. They cover the arm from the wrist to past the elbow. Combine them with gloves for complete arm protection. Elastic at both ends provides a secure and snug fit. One size fits all.

Double nitrile-coated sleeves have a nitrile coating on the inside and outside.

Sleeve Coating	Thick., mils	Lg.	Color		Per Pair 1-5	Per Pair 6-Up
Nitrile	16	18″	Black	5564T11	$14.29	$13.47
Double Nitrile	16	18″	White	5564T13	14.72	13.89
Neoprene	16	18″	Yellow	5564T16	15.06	14.19

Dry Box Gloves

Great for use in industrial applications and in chemical and medical research laboratories, these gloves fit 8″ dia. dry box access holes to create a controlled environment. They are unlined with a smooth surface. Dry box sleeves, connectors, and clamps are sold separately on the following page.

Latex (natural rubber) gloves provide the most dexterity and moderate chemical resistance.

Nitrile gloves resist punctures, solvents, oil, and grease.

Neoprene gloves offer great flexibility and touch sensitivity. Resist chemicals, oils, and ozone.

Hypalon gloves have outstanding resistance to abrasion, ozone, and many oxidizing chemicals.

Butyl gloves have the highest impermeability to water vapors, gases, toxic chemicals, and most fuels. Resist oxygenated solvents and most oxidizers and remain flexible in temperatures as low as –40° F.

To Order: Please specify size.

Dry Box Sleeves

Straight Sleeve

Accordion Sleeve with Glove

A typical dry box installation includes a glove, sleeve, and mounting clamps. Fit sleeves to 8″ dia. dry box access holes to create a controlled environment. Use with the dry box gloves on the previous page or any unlined chemical-resistant glove.

Latex (natural rubber) offers the most dexterity and moderate chemical resistance. *Nitrile* resists punctures, solvents, oils, and greases. *Neoprene* resists cuts, chemicals, oils, and ozone.

Sleeves include a PVC (polyvinyl chloride) ring glove clamp and Type 304 stainless steel spring glove clamp. *Accordion* style prevents the sleeve from collapsing and provides more air circulation.

Sleeve-to-dry box mounting clamps secure sleeves to 8″ dia. dry box access holes. Each sleeve is attached to both the inside and outside of the holes using two ring clamps. Clamps are sold in sets; each set includes four rings. Clamps are aluminum and have an 8″ ID with 1/4″ mounting holes. Fasteners included.

Sleeves with gloves allow you to change the glove quickly while keeping the sleeve attached to the dry box. Include a ring clamp and spring clamp. **To Order:** Please specify size.

Cotton and Cotton Blend Work Gloves

All gloves are washable, unlined, and have a knit-wrist cuff style, unless noted.

A&B ***Knit—*** Breathable and easy to wear for long periods of time. Gloves lend support and allow for good dexterity. Gloves are ambidextrous and can also be used as liners. ***Open fingertip*** styles allow better finger dexterity.

C ***Canvas—*** These durable gloves have a long service life. They're soft and comfortable to wear for extended periods of time.

D ***Jersey—*** Ideal for general plant maintenance and cleanup. Made of 100% cotton jersey. 9725T67 has a slip-on cuff and a red fleece lining for extra comfort and warmth.

E ***Terry Cloth—*** For both durability and comfort, choose these cotton/polyester blend work gloves. The heavyweight terry cloth loop-pile construction resists abrasion.

About Work Glove Cuff Styles and Patterns

Cuff Styles

Knit Wrist—Provides comfort and a snug fit.
Gauntlet—Easy removal. Holds tucked sleeve in glove so it won't get caught in machinery.
Band Top—Allows easy removal and air circulation.
Safety Cuff—Side slit enables wearer to throw off glove quickly in an emergency.
Slip On—Easy removal. Often referred to as driver's gloves.
Hook and Loop—Adjustable for the best fit.

Glove Patterns

Gunn—Extends glove life by keeping seams out of the work area.
Clute—Seams on back of glove reduce splitting; holds work area more tightly to palm.
Ambidextrous—Both sides of the glove are identical. Gloves can be worn on either hand. Extend glove life by merely flipping it over.

Sure-Grip Cotton, Cotton Blend and Synthetic Work Gloves

Gain a firm hold on your workpieces. These gloves have a raised PVC (polyvinyl chloride) pattern on the work surface areas to improve grip. All are washable and have knit-wrist cuff styles.

Grip-Dot—*Cotton/polyester knit* gloves have PVC dots covering both sides of the glove. *Cotton canvas* and *cotton jersey* gloves have PVC dots covering the palm-side of the glove and around the thumb and index finger.

Criss-Cross Grip—Both sides of the gloves have a PVC criss-cross pattern. *Nylon/polyester* have an extra-tacky grip.

To Order: Please specify size.

Cotton Sleeves

Protect your arms from abrasion with these 100% cotton arm coverings. All are washable.

Cotton knit sleeves are lightweight and breathable. They have elastic at both ends.

Denim sleeves are durable and have elastic at both ends.

Terry cloth sleeves are moisture absorbent and have moderate heat resistance. They have elastic at one end and a knit wrist at the other

Sleeves on a roll permit custom-cut lengths. Ends are not elasticized.

Cotton and Leather Finger and Thumb Cots

Cotton — *Leather Front Coverage, Open Tip* — *Leather Front/ Side Coverage, Over Tip* — *Leather Full Coverage, Closed Tip*

Protect your individual fingers from abrasion without restricting movement. These cots are an excellent alternative to full-hand protection.

Cotton—Knitted from comfortable single-ply cotton yarn. Washable.

Leather—All have elastic backs that hold them securely to your finger or thumb, except for the full-coverage style which is all leather and sewn at the tip.

Front coverage cots protect the finger's face. *Front/side coverage* cots keep the surface and side of the finger safe. *Full coverage* cots shield the entire finger.

Split cowhide is textured and durable. *Grain cowhide* is smooth and allows the finger sensitivity you need in more delicate applications.

To Order: Please specify size.

Leather-Palm and All-Leather Work Gloves

When you need more durability than knit gloves can offer, these unlined (unless noted) leather work gloves are an excellent choice. *Clute pattern* gloves have a full canvas back, unless noted. *Gunn pattern* gloves have a leather index finger and heel. *Double-palm* gloves have two layers of leather on the palm and index finger. *Open fingertip* gloves allow better finger dexterity. The hook-and-loop closure adjusts for the best fit.

Leather-palm gloves have cotton canvas backs (unless noted) that are lightweight and breathable.
Ultra-fit leather palm gloves have a spandex back that conforms to your hand for superior comfort and dexterity.
All-leather gloves offer better protection for the entire hand.
All-leather with sleeves have an 11″ long cotton sleeve with a 2″ wide strip of nylon mesh for air circulation.

Materials—*Split* or *brushed leather* refers to the rough side of the material; *grain leather* is the smooth side.
Economy Shoulder-Split Cowhide—Coarser than side-split and moderately durable.
Select Shoulder-Split Cowhide—A better, more durable grade of leather than economy.
Heavy Side-Split Cowhide—Made from a thicker leather for a strong, durable glove.
Grain Cowhide—Thick and durable. *High Visibility—*The fluorescent back and cuff and reflective tape on cuff and knuckles make them easy to spot.
Goatskin—Tanning in natural lanolin oils makes it the softest, most abrasion-resistant leather.
Pigskin—The choice for work exposed to moisture, this leather won't stiffen when wet.
Premium Grain Deerskin—Soft and flexible for optimal dexterity.

To Order: Please specify color and size when necessary.

● Palm is lined. ■ Full leather back. ★ Grain goatskin.

For information about gloves and sizing, see page 1766. For cuff style and pattern information, see page 1772.

Ultra-Fit Synthetic Leather Work Gloves

For ultimate dexterity plus abrasion and wear resistance, choose these flexible gloves. They have a synthetic leather palm, a breathable spandex backing, and a hook-and-loop cuff closure. A terry cloth upper on both thumbs (unless noted) allows you to clear debris and perspiration from your face without removing your gloves. All are washable.

(A) Standard gloves have synthetic leather reinforcements on the palm.

(B) High-visibility gloves have an eye-catching reflective backing. Gloves do not have synthetic leather reinforcements on the palm.

(C) Vented gloves allow air circulation to keep your hands cool and reduce perspiration.

(D) Open fingertip extra-abrasion-resistant gloves have PVC (polyvinyl chloride)-based abrasion-resistant reinforcements with open tips for the thumb and first two fingers, providing extra dexterity.

(E) Extra-abrasion-resistant gloves have PVC-based reinforcements on the palm and fingertips.

(F) Sure-grip gloves have a cross-hatched pattern of tacky silicone bonded to the palms and along the length of fingers with a solid patch of silicone on each fingertip, providing a nonslip grip.

(G) Heavy duty gloves have reinforced knuckles to protect the back of your hand.

(H) Double-palm gloves have a second layer of synthetic leather for impact protection.

To Order: Please specify size: S,M,L,XL, or XXL.

■ Does not have a terry cloth upper on thumb. ★ Color is high-visibility yellow.

Coated Work Gloves

Textured Rough Dotted

Palm-coated gloves protect your hands without limiting dexterity. The back side of the glove is breathable to keep your hands cool and comfortable. ***Fully coated*** gloves provide the same protection to the front and the back of the hand.

Latex (Natural Rubber)— Abrasion resistant. *High Visibility*—Yellow back makes these easy to spot.

Nitrile— Chemical, oil, abrasion, and puncture resistant.

Ultra-Flex Nitrile— Coating combines nitrile and air to provide the benefits of nitrile with maximum dexterity.

Sure-Grip Nitrile— Surface is dotted to improve grip and extend wear.

Polyurethane— Lightweight and abrasion resistant, these gloves offer the sensitivity required for delicate assembly work and small parts handling.

PVC (Polyvinyl Chloride)— The economical choice for chemical and grease resistance.

PVC/Nitrile Blend— Superior chemical and abrasion resistance.

To Order: Please specify size where necessary.

Ultra-Flex Nitrile Palm Coated

PVC Fully Coated

ⓘ For additional information about the chemical compatibility of these gloves, go to mcmaster.com and search for **5306TAC**.

About Cut-Resistant Gloves

Cut resistance protects the glove from damage and the wearer from injury. The ANSI/ISEA 105-2005 standard classifies a glove's cut resistance based on the weight in grams needed to cut through the material with 25 mm of blade travel. The chart at right defines the levels of cut resistance.

Level	Weight, grams
0	<200
1	≥200
2	≥500

Level	Weight, grams
3	≥1000
4	≥1500
5	≥3500

Kevlar Cut-Resistant Gloves

As comfortable as knit gloves, these durable Kevlar gloves have a long service life. They're ambidextrous, washable, and have a knit wrist. Color is yellow.

Open fingertip gloves allow better finger dexterity.

Full gloves with sleeve provide arm protection.

Dot-pattern gloves have a raised pattern of blue PVC (polyvinyl chloride) dots for an improved grip.

Criss-cross gloves have a clear PVC criss-cross pattern for a superior grip.

Kevlar Kleen gloves are almost lint free to minimize fabric contamination of your application.

To Order: Please specify size.

Nitrile-Coated Kevlar Cut- and Abrasion-Resistant Gloves

Get the cut resistance of Kevlar combined with the abrasion resistance of nitrile.

Palm-coated gloves protect from abrasion without limiting dexterity and have a Kevlar/Lycra lining.

Fully coated gloves provide the same protection to the front and the back of the hand.

Ultra-flex nitrile gloves provide extra grip in oily applications.

Nitrile gloves have a jersey lining for comfort.

To Order: Please specify size.

Warning! ***Cut-resistant gloves do not protect against cuts from chain saws and other power equipment.***

For information about gloves and sizing, see page 1766. For information about cut resistance, see page 1775.

Spectra/Type 304 Stainless Steel Cut-Resistant Gloves

Spectra fiber gives these knit gloves the cut protection and dexterity required to work with sharp objects. They're abrasion resistant, washable, and have a knit wrist. Standard duty and heavy duty gloves are ambidextrous and made with materials that comply with FDA regulations for food contact.

Standard duty gloves have a single strand of Spectra and Kevlar fiber wrapped around a stainless steel core.

Heavy duty gloves have two strands of Spectra and Kevlar fiber wrapped around a stainless steel core.

Sure-grip gloves have a single strand of Spectra fiber wrapped around a stainless steel core. Palm and fingers are coated with lines of polyurethane for added grip.

To Order: Please specify size. For sure-grip gloves, specify left or right hand. *Note:* All gloves are sold individually (order two for a pair).

Vibration-Protection Gloves and Palm Pads

Gel padding reduces the vibration to the hands and fingers. These gloves and pads allow workers to maintain normal hand movement while using equipment and power tools that produce high levels of vibration. Gloves have a clute pattern.

(A&B) Leather-Palm Open Fingertip— They're unlined with a snug-fitting Lycra-spandex backing and a split cowhide palm. *(A) Gloves/Liners*—Use alone or as liners. They're padded in the palm, thumb, and index finger. *(B) Gloves*—Padded in the palm, all fingers, and thumb.

(***C) All-Leather Open Fingertip—*** Made from grain cowhide, these heavy duty gloves have a cotton lining and a hook-and-loop wrist closure. Palm is padded.

(D) Leather-Palm Full Glove— Protect your whole hand from vibration. They're made of unlined grain cowhide with a spandex back and wrist. They have a hook-and-loop wrist closure.

(E&F) All-Leather Palm Pads— Protect the palms of your hands with these split cowhide pads—just slip the elastic band over the back of your hand. *(E) Standard* have one thumb band and one hand band. *(F) Fitted* conform to your palm and are secured with two bands.

To Order: Please specify size where necessary.

Repetitive-Motion Protection Gloves

Reduce fatigue in applications that require you to perform the same hand motions over and over. These gloves support your palm and wrist. They're made of 88% nylon and 12% spandex, retaining body heat to stimulate circulation and keep muscles relaxed. Use alone or as liners. Gloves are ambidextrous and have a 1½″ elastic cuff.

To Order: Please specify size: S,M,L, or XL.

Welding Gloves and Pads

Protect your hands and arms from sparks and flames with these welding gloves and pads.

Gloves

All have a gunn pattern and gauntlet cuff. Cuff length is 5½″ for 13″ and 14″ long gloves; 10″ for 18″ long gloves; and 15″ for 23″ long gloves. Critical seams and fingertips are reinforced to prevent burn-through. For more information about leather texture, see page 1773.

Standard duty cowhide gloves have Kevlar threads and a reinforced thumb strap. ***Comfort-fit cowhide*** gloves have Kevlar threads and a thick lining that makes them more comfortable than light duty or standard duty gloves. ***Aluminized comfort-fit cowhide*** gloves have an aluminized shield that resists heat and UV radiation. The shield is on the inside of the *inner layer* gloves and on the back of the *outer layer* gloves. ***Pigskin*** remains flexible even in wet and oily applications. ***Premium elkskin*** gloves offer great dexterity, even after repeated exposure to moisture and heat. The back of the glove is lined with Nomex for heat insulation. The palm is unlined for maximum dexterity. **To Order:** Please specify color and size where necessary.

Pads

Aluminized welding glove pad fits over gloves and protects against heat and splatter. They're made from highly heat reflective aluminized rayon and have two straps to hold them in place.

Side-split cowhide arm pad allows you to rest your arm on a hot surface while welding. Just slip your arm through the elastic bands and adjust the hook-and-loop closure for best fit.

For information about gloves and sizing, see page 1766. For cuff style and pattern information, see page 1772.

TIG and MIG Welding Gloves

4″ Gauntlet Cuff

Get the dexterity and heat resistance you need for TIG and MIG welding. These gloves are unlined for sensitivity and have a gunn pattern. ***TIG welding*** gloves are thinner and offer more dexterity, but are less heat resistant than ***MIG welding*** gloves.

Grain pigskin gloves remain flexible even when wet. *Cowhide* gloves have a seamless index finger. *Split deerskin* gloves are extra soft and flexible for optimal dexterity. *Grain sheepskin* and *grain goatskin* gloves have excellent dexterity. *Grain deerskin* gloves are thick for durability yet soft and comfortable.

To Order: Please specify size.

Comfort-Fit Heat-Protection Gloves and Finger Cots

Nomex gloves offer a cotton knit fit with high temperature resistance. They quickly cool down after removal from a hot surface so you don't have to worry about burning your hands when you take them off. Gloves are antistatic, ambidextrous, washable, and have a knit wrist. Color is beige.

Zetex finger cots protect your fingers without the bulkiness of gloves. Cots are not combustible. Color is white.

Neoprene Heat-Protection/Chemical-Resistant Gloves

A thermal lining protects your hands while you handle hot surfaces, and a neoprene outer coating resists chemicals, grease, and solvents. These washable gloves are extra long for added arm protection. Made from materials that comply with FDA regulations for food contact. Color is black.

18″ long gloves have a 9″ gauntlet cuff; ***26″ long*** have a 17″ gauntlet cuff.

ⓘ For additional information about the chemical compatibility of these gloves, go to mcmaster.com and search for **5306TAC**.

Warning! ***Heat-protection gloves are designed for intermittent use only at temperatures listed.***

For information about gloves and sizing, see page 1766. For cuff style and pattern information, see page 1772.

Leather Heat-Protection Gloves

Made of flexible leather, these gloves protect your hands in high-temperature applications. All have a gauntlet cuff, clute pattern, and wool lining. 11″ long gloves have a 1″ cuff; 13″ long have a 3″ cuff.

Heavyweight gloves have an added layer of fabric that allows longer heat exposure time.

Extra-heavyweight gloves have two added layers of fabric and wool for longer exposure time than heavyweight.

Firefighters' Leather Heat-Protection Gloves

In severe conditions, these gloves can take the heat that destroys other gloves. Used in firefighting and similar severe duty applications, they have a self-extinguishing, waterproof Gore lining. Gloves have a gunn pattern and a 3″ Nomex knit wrist cuff. Not rated for maximum temperature. Meet OSHA, CAL-OSHA, and NFPA (National Fire Protection Association) requirements. ***Side-split cowhide*** is specially tanned to remain soft even after repeated soakings. ***Brushed pigskin*** is durable and abrasion resistant.

To Order: Please specify size.

	Lg.	Color	Available Sizes		Per Pair 1-2	Per Pair 3-Up
Side-Split Cowhide	13″	Blue	S,M,L,XL	5247T9	$70.08	$63.26
Brushed Pigskin	13″	Tan	S,M,L,XL	5247T8	75.87	68.29

Extreme Heat-Protection Gloves and Mittens

Get top-notch protection during intense heat applications. These gloves and mittens are designed for intermittent contact with high-heat objects.

All have a gauntlet cuff. 11″ long gloves and mittens have a 2″ cuff; 13″ and 14″ have a 5″ cuff (unless noted); 18″ have a 9″ cuff; and 23″ have a 14″ cuff. Size is large for all gloves and mittens (unless noted). Gloves have a clute pattern; mittens are ambidextrous.

Leather-palm gloves and mittens offer better cut and abrasion resistance but have lower heat resistance than standard gloves.

Aluminized gloves and mittens protect against radiant heat and molten splashes. They offer better heat protection from radiant heat than standard gloves, but they're not designed to handle objects above 400°F.

Heat-Protection Sleeves

Cotton

Leather with Arm Straps

Protect your arms from heat and sparks with these flame-resistant sleeves.

Cotton canvas sleeves are designed for light duty applications and have elastic ends. *Note:* Washing will compromise the sleeves' flame resistance.

Cotton sleeves have elastic ends. They retain their flame resistance through repeated washings.

Leather sleeves are made of shoulder-split cowhide that's tanned for flame and abrasion resistance. All have wrist snaps; the 18″ and 23″ lengths also have arm straps.

Kevlar blend sleeves resist heat and abrasions. All have wrist snaps; the 18″ and 23″ lengths also have arm straps.

Leather Cold-Protection Gloves

High Visibility

Premium Grain Deerskin

An insulated lining combined with the comfort and durability of leather provides protection in cold environments. All gloves have a gunn pattern. All have an elastic wristband for added comfort and easy removal.

Leather palm gloves have multiple layers of insulated lining. ***High-visibility*** gloves have a safety-orange nylon back and cuff with a reflective knuckle strap.

Cowhide gloves resist abrasion. Split refers to the rough side of the material; grain is the smooth side. *Grain pigskin* gloves remain flexible even in wet and oily environments. *Grain deerskin* gloves provide the best dexterity, even in extremely cold temperatures.

To Order: Please specify size where necessary.

Hand Warmer Pads— Place inside gloves for ten hours of warmth.

Work Boots

We offer a variety of boot styles and materials—choose the ones best suited for your application. These boots are designed to fit over socks. *Steel shanks* provide additional support for demanding work such as extensive ladder climbing. *Fiberglass* and *composite shanks* are similar in strength to steel but lighter. *Steel midsoles* provide extra puncture resistance when working around glass, nails, and scrap metal. All of our *steel toe* boots meet ASTM F2413-05.

PVC—The economical choice for everyday water resistance.

PVC/Polyurethane—This combination offers chemical resistance and durability.

Insulated PVC/Polyurethane—Wool felt insulation keeps your feet warm.

Premium PVC/Polyurethane—More polyurethane in the blend gives these boots better chemical resistance than PVC/polyurethane.

Rubber—Keep your feet dry in water and mud. These boots are flexible and abrasion resistant.

Insulated Rubber—Also known as firefighters' boots, these boots provide the heat protection and durability required by firefighters. Uppers are ozone resistant and foam insulated. *15″ boots* meet OSHA 29 CFR 1910.136 and 1910.156 and CSA Z195-M92. They are also UL certified as meeting NFPA Standard for structural firefighting.

Neoprene Rubber—Use in heavy duty applications exposed to petrochemicals. These boots also resist most acids and animal fats.

Leather and ***Insulated Leather***—More comfortable and flexible than many of the other boots we offer. *Leather* have nonmarking soles. *Insulated leather* have waterproof rubber bottoms and multiple-layer insulation that includes a wool/polyester blend and foam.

To Order: Please specify full size, unless noted. For all boots, order your normal shoe size.

Also Available: Replacement liners for insulated PVC/polyurethane boots. Please ask for 56145T86 and specify size.

★ Available in ½ sizes. ▲ Available in ½ sizes except for 12½.
● Has a composite toe and meets ASTM F2413-05.

Waders

Wear these waders for more coverage than ordinary boots in wet environments. They fit right over your socks. Steel toe meet ASTM F2413-05 for impact and compression; steel midsole meet ASTM F2413-05 and CSA Z195-02, Grade 1 for puncture resistance. Lengths are approximate and measured from the bottom of the heel to the top of the wader.

Hip Waders—Provide protection to mid-thigh. All have adjustable straps with snaps that loop through your belt for a secure fit. ***Chest Waders***—*Rubber* have insulated boots, a drawstring waist, and suspenders. *PVC* have suspenders and a belt. *Neoprene* have bib-style suspenders and reinforced knees.

Rubber is the best choice for durability around water, mud, and sludge. *PVC* resists oil, gasoline, and ozone. *Neoprene* is good for use around petrochemicals. *Steel shanks* provide additional support for demanding work such as extensive ladder climbing. *Steel midsoles* provide extra puncture resistance when working around glass, nails, and scrap metal. For a shank and midsole illustration, see work boots on this page.

Overshoes

Pull-On Rubber

Pull-On PVC

Snap Closure

Strap Closure

Insulated Buckle Closure with Studded Sole

Fit these overshoes right over your shoes or boots to protect them from wet conditions. Soles are skid resistant.

Snap- and ***strap-closure*** overshoes provide a secure fit and more protection above the ankle.

Insulated buckle closure with studded sole overshoes protect to –60° F and provide a better grip in icy conditions.

To Order: Please specify size. Overshoes are designed to fit over street shoes, so order your normal size. However, consider ordering a larger size if wearing with boots. For letter sizes, use chart below. For a women's-to-men's numeric size conversion chart, see page 1781.

Ice Grippers

Standard Duty Pull-On

Heavy Duty Strap-On

Gripping studs provide traction on otherwise dangerous surfaces. These grippers fit over your shoes and boots.

Standard Duty Pull-On— Easily pull on and off by stretching the rubber harness over any shoe or boot. They have four studs on the front and two on the heel. Available in sizes S (up to 7½), M/L (8-10½), and XL (11-up). ***Heavy Duty Strap-On—*** 17 steel studs on each gripper dig in and hold tight. They have hook-and-loop straps, making them adjustable and easy to slip on and off. Available in sizes XS (5-6), S (6½-7½), M (8-10), L (10½-12), and XL (12½-14).

All sizes are men's. **To Order:** Please specify size.

		Per Pair 1-3	4-Up
Standard Duty Pull-On	5440T4	$30.56	$28.95

Shoe and Boot Insoles

Gel

Stainless Steel

Keep your feet comfortable with our cushioned insoles. Gel insoles have an antimicrobial top layer to reduce odors.

Gel insoles are made of polyurethane and provide maximum shock and impact absorption. Air flow channels allow breathability to keep your feet cooler. **To Order:** Please specify full or half size.

Type 301 stainless steel insoles protect against punctures. They're flexible and made of 0.019″ thick stainless steel under a 1/16″ thick foam pad. Meet ANSI Z41.5-1999. **To Order:** Please specify full size.

Toe and Foot Guards

Plastic Toe Guard — *Plastic Toe/Foot Guard* — *Steel Toe Guard* — *Aluminum Alloy Foot Guard* — *Aluminum Alloy Toe/Foot Guard* — *Steel/Rubber Overshoe* — *Steel/Rubber Overshoe for Work Boots*

Light duty guards deflect low-impact blows. Meet ANSI Class 30. ***Heavy duty*** guards protect against high-impact blows. Meet ANSI Class 75.
Aluminum alloy foot guards (also known as metatarsal guards) fit over steel-toe work boots to protect the tops of your feet.
Overshoes with toe guards are made of stretchable rubber to easily slide over your shoes. **To Order:** For 4606T17, please specify men's size S (7-8½), M (8½-9½), L (9½-11), XL (11-12), or XXL (12-13). For 4606T19, specify men's S (5-7), M (8-10), L (11-12), L/XL (13-14), XL (15-16), or XXL (17-19).

Boot and Glove Drying Racks

Boot Rack

Glove Rack

Store and dry up to four pairs of boots or gloves on these steel racks. Boot rack has three mounting holes; glove rack has two. Holes are 16″ apart; mounting screws are included. ***PVC-coated*** rack holds up in harsh environments where acids or solvents are present.

	Ht.×Wd.×Dp.	Epoxy Coated	Each	PVC Coated	Each
Boot Rack	4½″ ×35¼″×10½″	1042T6	$27.43	1042T1	$29.67
Glove Rack	14″ ×22″ × 5¼″	1042T8	25.88	1042T2	29.90

Shin and Ankle Guards

Shin Guards (Knee pads not included) — *Ankle and Foot Guards* — *Shin and Foot Guards*

Shin guards can be worn in conjunction with your knee pads. Just loop the nylon strap around the bottom knee pad strap and secure with the two hook-and-loop closures. For knee pads, see page 1784.

Ankle and foot guards, also known as spats, protect from sparks and moderate molten-metal splashes. They have a snap-button closure and adjustable instep strap.

Shin and foot guards, also known as leggings, protect from sparks and moderate molten metal splashes. They also offer moderate resistance to abrasion and tears. A spring-tension wire frame keeps them securely in place.

Cut-Resistant Chaps

Protect your legs from chain saw injuries with these chaps. Each leg has padded protection on the front and left side. Chaps have a zippered front pocket and color is orange. Meet ASTM F1970-98 leg protection standards for chain saw users.

Standard chaps are made of 420 denier nylon and include quick-release buckles.

Extra-abrasion resistant chaps are made of 1000 denier Cordura nylon, which is more abrasion resistant than the standard duty material. They include three sets of leg straps with buckles.

Standard

Lg.	Standard	Each	Extra-Abrasion Resistant	Each

Elbow Pads

Covered with abrasion-resistant black nylon fabric, these foam-rubber pads have nonslip rubber caps for added stability. Brass grommets allow air circulation. Includes elastic straps with hook-and-loop closures.

Size		Per Pair
Large	56285T83	$30.20

Knee Pads

Foam Rubber | Leather | Protective Cap | Hinged | Gel Filled Ultra Glide | Gel Filled Swivel Cap | Fluid Filled

Foam rubber pads are ergonomically designed for a secure fit and have a hook-and-loop strap. Color is tan. *Light duty* pads are 5/8″ thick. *Heavy duty* pads are 3/4″ thick with an added layer of rubber for longer life.

Leather pads have a tough leather exterior for superior abrasion resistance. They're 1/2″ thick with a rivet-reinforced inner layer of water-resistant felt and an adjustable leather strap with a metal buckle.

Protective cap pads provide additional protection on rough and hard surfaces. They have two straps with buckle/button closures. *Plastic cap* is white with black nylon fabric. *Nonslip rubber cap* provides traction on wet surfaces. They're black rubber with black nylon fabric. *Nonmarring rubber cap* won't mark or scuff surfaces. They're tan with black nylon fabric. *Flame-resistant plastic caps* don't support combustion and will not burn. They're black plastic with gray cotton fabric.

Hinged pads provide maximum protection without sacrificing mobility. These pads not only guard the knee cap but also protect above and below the knee. Pads have a gray hard plastic outer shell that's cushioned with 1/2″ of foam rubber. Each pad has a nonskid strip, two elastic adjustable straps, and two fastening clips.

Gel-filled pads have a gel center for comfort and longer life. *Ultra-glide* pads allow easy movement with little resistance on hard surfaces. They're nylon rubber with black nylon fabric and have a hook-and-loop closure. *Swivel cap* is translucent plastic with black polyester fabric and a hook-and-loop closure. *Leather* pads have a tough exterior for superior abrasion resistance. They have two straps with buckle/button closures.

Fluid-filled pads provide more comfort and protection than foam rubber pads. They have a replaceable fluid-filled insert that distributes pressure evenly around the knee cap. Pads consist of black polyurethane caps and black nylon fabric held firmly in place by hook-and-loop straps.

Safety Vests and Shirts

Mesh Vests: Plain | Reflective Stripe

ANSI Compliant: Two-Tone Vest | Dual-Stripe Vest | Shirt

Outfit personnel with these bright, highly visible vests and shirts. All vests have hook-and-loop front closures, unless noted.

Mesh vests are 23″ long and have elastic side straps that fit chest sizes 34″-40″. Fluorescent lime vests are polyester; orange vests are vinyl. Meet OSHA standards for daytime use. *Reflective stripe vests* have sewn-on stripes. Fluorescent lime vests have 3/4″ wide reflective white stripes; orange vests have 1 3/8″ wide reflective lime stripes.

ANSI-compliant vests and ***shirt*** meet ANSI 107, Class 2 standards for high visibility safety apparel. All are made of polyester and have 2″ wide reflective tape stripes. *Two-tone single stripe* is trimmed in bright orange. *Dual stripe with pockets* has nine outside and three inside pockets. ***Shirt*** has one chest pocket and wicks away perspiration to keep you cooler.

To Order: Please specify fluorescent lime (FL), fluorescent yellow (FY), or orange (O) color when necessary. For ANSI-compliant vests and shirt, please specify size: M (chest size 37-39/30″ Lg.), L (chest size 39-43/27″ Lg.), XL (chest size 43-46/27 1/2″ Lg.), XXL (chest size 46-49/28″ Lg.), 3XL (chest size 49-52/28 1/2″ Lg.).

Disposable Aprons and Overshoes

Protect your clothes and shoes from splashes.

Note: 1 mil = 0.001″.

Polyethylene garments are commonly used in food preparation environments. They're made from materials that comply with FDA regulations for food contact. *Overshoes* fit over street shoes up to men's size 14. Tie around legs to secure.

Latex overshoes resist acids, alcohol, and salts and have a nonslip sole.

Sizing Guidelines for Disposable Clothing

The chart at right is a general guideline for sizing. Proper fit varies with individual body shape and underclothing.

Size	Height	Weight
S	5′0″-5′7″	100-125 lbs.
M	5′2″-5′7″	125-160 lbs.
L	5′5″-5′10″	140-200 lbs.
XL	5′7″-6′2″	150-220 lbs.

Size	Height	Weight
XXL	5′11″-6′4″	180-240 lbs.
3XL	6′2″-6′5″	230-280 lbs.
4XL	6′5″-6′7″	240-290 lbs.
5XL	6′6″-6′8″	260-310 lbs.

Disposable Clothing

For environments where reuse or decontamination is impractical, these garments are the ideal solution.

Tyvek Garments and Accessories

Heat- and pressure-bonded olefin fibers form a soft yet strong material. Tyvek is an excellent barrier against dust, dirt, and nonhazardous liquids. It's low-linting and breathable to keep you cooler. *Note:* Tyvek provides limited splash protection and is not recommended for continuous liquid exposure. **To Order:** Please specify size where necessary.

Tyvek—*Pants* have an elastic waist. *Shirt* and *coats* have a snap front. Aprons are one size fits all. All other garments are available in sizes S, M, L, XL, XXL, and 3XL, unless noted. *Accessories* are one size fits all except shoe and boot covers, which fit up to men's size 12.

About Selecting the Proper Clothing Size

When measuring jacket size, position the tape measure snugly under your arms and shoulder blades, and measure around the fullest part of your chest. Find your waist size by measuring just above the top of your hip bone. Finally, be sure to take all measurements over any clothing you expect to wear underneath the garment.

Coveralls and Jumpsuits

Short-Sleeve Coveralls

Long-Sleeve Coveralls

Long-Sleeve Jumpsuit

Enjoy all-day comfort and protection in these garments. ***Coveralls*** have a roomy design to fit easily over your work clothes. ***Jumpsuits*** can be worn next to the skin for a more fitted appearance.

Monogramming—Personalize our ***all-cotton*** and ***polyester/cotton blend*** coveralls with a custom monogram. Your monogram (max. of 20 characters) will be embroidered on the coveralls in white thread (except on white coveralls the monogram will be in navy thread). Personal name monograms are positioned over the left breast pocket; company name monograms are located over the right breast pocket. **To Order:** Please ask for the McMaster-Carr part number and specify block or script lettering.

Polyester/Cotton Blend Coveralls and Jumpsuits

More durable than all cotton. All have brass two-way front zipper.

Coveralls have six pockets: two chest, two waist, and two rear. **To Order:** Please specify *regular* (for heights 5′-6′) and an even chest size between 34-56 or *long* (for heights 6′1″-6′5″) and an even chest size between 40-56. *Short Sleeve*—Color is navy blue. *Long Sleeve*—Specify color: brown, gray, medium blue, navy blue, or white.

Jumpsuits have five pockets: one chest with pencil slot, two waist, and two rear. They also have a pleated back, elastic waist, and adjustable belt. **To Order:** Please specify color: blue or navy blue. Also specify *regular* (for heights 5′8″-5′11″) or *long* (for heights 6′-6′3″) and chest size: M (38-40), L (42-44), XL (46-48), XXL (50-52), or 3XL (54-56).

Arm Band	1464T21	$14.67
Repl. 3-Volt Battery	7701K34	1.92

For information about how to select the proper clothing size, see page 1788.

Lab and Shop Clothing

Lab Shirts and Pants

Just like the scrubs worn in hospitals, these reversible garments are soft and comfortable for all-day wear. They're made from 55% cotton and 45% polyester.

Shirts have one chest pocket. **To Order:** Please specify size from chart below.

	XS	S	M	L	XL	XXL
Women's Dress	2-6	8-10	12-14	16-18	20-22	24-26
Men's Chest	30-32	34-36	38-40	42-44	46-48	50-52

Pants have a rear pocket and a drawstring waist. **To Order:** Please specify waist size: XS (24-26), S (28-30), M (32-34), L (36-38), XL (40-42), or XXL (44-46).

		Each
Shirts		
Green	**2027T1**	$10.64
Light Blue	**2027T2**	10.64
Navy Blue	**2027T3**	10.64
Pants		
Green	**2027T4**	12.30
Light Blue	**2027T5**	12.30
Navy Blue	**2027T6**	12.30

Lab Jackets

Easy to slip on, these jackets are made of 65% polyester and 35% cotton. They have a button front, finished cuffs, and two waist pockets. ***Women's*** jacket has ¾ length sleeves. ***Men's*** jacket also has one chest pocket.

To Order: Please specify color: light blue, navy blue, or white. For women's, specify dress size: M (10-12), L (14-16), XL (18-20), XXL (22-24), or 3XL (26-28). For men's, specify even chest size between 34-54.

		Each
Women's Lab Jacket	**5294T1**	$21.55
Men's Lab Jacket	**5294T6**	28.72

Lab Coats

For a more professional look, choose these durable knee-length coats. Made of 65% polyester and 35% cotton, they have a clear-button front, an adjustable belt attached to the back, and three pockets: one chest and two waist. ***Men's lab coat*** also has hip slits for easy access to your pants pockets.

To Order: Please specify color: light blue, navy blue, or white. Also specify women's even chest size between 32-42 or men's even chest size between 32-54.

		Each
Women's Lab Coat	**5296T7**	$49.52
Men's Lab Coat	**5296T5**	49.52

Moisture-Repellent Lab Coat

Commonly known as a barrier coat, this lab coat is made of 99% polyester and 1% carbon fiber. It has stainless steel snaps, knit wrist cuffs, and three pockets: one chest and two waist. Color is white with thin black vertical pinstripes.

To Order: Please specify men's chest size: S (34-36), M (38-40), L (42-44), XL (46-48), XXL (50-52), or 3XL (54-56).

		Each
Lab Coat	**5472T2**	$44.00

Static-Control Jacket and Lab Coats

Prevent damage from electrostatic discharge with our static-control clothing. All garments are a poplin blend of 65% polyester, 34% cotton, and 1% carbon-modified nylon. The surface resistivity for unlaundered fabric is 2.6×10^6 ohms/sq. Both the jacket and the lab coats have front and wrist stainless steel snap closures and three pockets: one chest and two waist. Color is light blue (also known as silica blue in the static-control industry).

To Order: Please specify size from the chart below.

	S	M	L	XL	XXL	3XL
Women's Dress	8-10	12-14	16-18	20-22	24-26	28-30
Men's Chest	34-36	38-40	42-44	46-48	50-52	54-56

		Each
Jacket	**53045T22**	$35.61
Women's Lab Coat	**53045T55**	41.25
Men's Lab Coat	**53045T44**	41.20

Flame-Resistant Lab Coat

Made of Indura all-cotton fabric, this comfortable coat is self-extinguishing. It has four pockets: two chest and two waist, plus hip slits for easy access to your pants pockets. Color is navy blue.

To Order: Please specify men's even chest size between 38-54.

		Each
Lab Coat	**2377T51**	$73.26

Wrap-Around Lab Smock

Made of 65% polyester and 35% cotton, this smock is collarless with ¾ length sleeves and three pockets: one chest and two waist. It also has hip slits for easy access to your pants pockets.

To Order: Please specify color: light blue, navy blue, light green, tan, or white. Also specify size from the chart below.

	S	M	L	XL	XXL
Women's Dress	8-10	12-14	16-18	20-22	24-26
Men's Chest	36-38	40-42	44-46	48	50

		Each
Lab Smock	**5298T44**	$52.88

Shop Coats

Both of our durable shop coats are knee-length with hip slits for easy access to your pants pockets.

Polyester/cotton blend coat is made of 65% polyester and 35% cotton. It has a concealed snap front and four pockets: two chest and two waist. Color is navy blue. **To Order:** Please specify men's even chest size between 36-56.

All-cotton coat is preshrunk and comfortable. It has a clear-button front, an adjustable belt attached to the back, and three pockets: one chest and two waist. **To Order:** Please specify color: navy blue or tan. Also specify men's even chest size between 32-56.

		Each
Polyester/Cotton Blend Coat	**53355T71**	$30.10
All-Cotton Coat	**5290T64**	55.00

Sizing Guidelines for Rainwear and Chemical-Resistant Clothing

The chart at right is a general guideline for sizing. Proper fit varies with individual body shape and underclothing.

	S	M	L	XL	XXL	3XL	4XL	5XL
Chest	36-38	40-42	44-46	48-50	52-54	56-58	60-62	64-68
Waist	32-34	36-38	40-42	44-46	48-50	52-54	54-56	58-60

Rainwear

***PVC (Polyvinyl Chloride)-Coated Polyester*—**Fabric provides strength and durability for long-term use.

Coats are 49″ long and have snap front and wrists. Jacket length varies by size. *Three-piece suit* consists of a jacket with snap front and wrists, a detachable hood, and bib overalls with adjustable elastic suspenders and snap closures on the ankles. *Hooded poncho* is 40″ long.

To Order: Please specify size where necessary. For information about selecting the proper clothing size, see page 1788.

	Color	Available Sizes		Each
Bib Overalls	Yellow	M,L,XL,XXL,3XL, 4XL,5XL	53535T2	$11.24
Jacket w/ Detachable Hood	Yellow	M,L,XL,XXL,3XL	53535T1	13.50

Coat w/ Detachable Hood	Yellow	S,M,L,XL,XXL,3XL, 4XL,5XL	53535T4	17.50
Three-Piece Suit	Yellow	S,M,L,XL,XXL,3XL,4XL	53535T3	22.45

Light Duty Rainwear

For intermittent exposure to wet weather, choose this single-ply PVC (polyvinyl chloride) clothing.

Hooded poncho is 40″ long and comes with a carrying pouch. **To Order:** Please specify color: clear, orange, or yellow.

Three-piece suit with pants consists of a snap-front jacket, detachable hood, and pants with an elastic waist and snap closures on the ankles. Seams are heat sealed. Color is yellow. **To Order:** Please specify size.

Three-piece suit with overalls consists of a snap-front jacket, detachable hood, and bib overalls with adjustable elastic suspenders and snap closures on the ankles. Seams are heat sealed. Color is yellow. **To Order:** Please specify size.

	Available Sizes		Each
Hooded Poncho	One Size	52115T1	$6.13
Three-Piece Suit with Pants	M,L,XL,XXL	5380T2	8.35
Three-Piece Suit with Overalls	M,L,XL,XXL	5380T3	12.07

Breathable Rainwear

Suit up in clothing that allows perspiration to escape for increased comfort while you work. This rainwear is lighter than most coated clothing and has a layer of Gore-tex between the waterproof nylon shell and nylon lining.

Jacket is 30″ long and has snap front and wrists, plus collar snaps for the ***detachable hood*** (sold separately). ***Pants*** have an elastic waist and snap closures on the ankles. ***Three-piece suit*** consists of the jacket, detachable hood, and pants.

To Order: Please specify color: royal blue or yellow. Also specify size where necessary using the chart below. For information about selecting the proper clothing size, see page 1788.

Size	Chest	Waist
S	38-40	30-32
M	41-43	33-35
L	44-46	36-38
XL	47-49	39-41
XXL	50-52	42-44

Pants	S,M,L,XL,XXL	11975T33	211.46
Detachable Hood	One Size	11975T65	56.52
Three-Piece Suit	S,M,L,XL,XXL	11975T82	446.25

Cooling Vest

Avoid heat stress and improve productivity by keeping workers cool and comfortable. Made of blue flame-resistant cotton, this vest is 20″ long with adjustable shoulder and waist straps. Vest includes a set of two removable multicell cooling packs.

Cool the packs by placing them in ice water or the freezer for 20-30 minutes. They change to a semi-solid state when cool and maintain a temperature of 55° F for approximately 2½ hours. Vest and set of two cooling packs weigh 6.5 lbs.

		Each
Complete Vest	5249T11	$216.11
Replacement Cooling Pack Set	5249T15	193.49
Replacement Vest	5249T18	90.96

For sizing guidelines, see page 1790.

Flame-Resistant Rainwear

Protect yourself from flames as well as the elements with this comfortable, lightweight clothing. ***PVC (polyvinyl chloride)-coated*** rainwear resists some salts, alkalies, alcohols, and acids.

PVC-Coated Nylon

Garments are yellow and have a PVC coating on the inside and out. Seams are heat-sealed (except hooded coveralls, which are double-stitched). Meets ASTM D6413 for flame resistance. **To Order:** Please specify size where necessary.

Jackets and *coat* have a snap front. *Bib overalls* have adjustable suspenders. *Three-piece suit* consists of a jacket, detachable hood, and bib overalls. *Two-piece suit* consists of a hooded jacket and bib overalls.

Nonreflective clothing has taped seams to seal out moisture. *Jackets* are 30″ long. *Coat* is 49″ long. *Hooded coveralls* have a front zipper with snap flap.

Reflective clothing has snap closures. *Jacket* is 32″ long and has reflective striping for visibility and a corduroy collar.

	Available Sizes		Each

Flame-Resistant Heavy Duty Rainwear

A heavyweight PVC shell and backing with an inner layer of nylon make these garments a good choice for protection against the elements. The seams are dielectrically welded for strength. All meet ASTM D6413 for flame resistance. Color is green.

Hooded jacket has snap cuffs and a heavy duty zipper with a snap closure.

Bib overalls have heavy duty elastic shoulder straps with quick-release buckles and snap cuffs.

Two-piece suit consists of the hooded jacket and bib overalls.

To Order: Please specify size. For information about selecting the proper clothing size, see page 1788.

	Available Sizes		Each
Hooded Jacket	XXL,3XL,4XL	**5393T52**	$27.60
Bib Overalls	XL,XXL,3XL,4XL	**5393T54**	26.04
Two-Piece Suit	XXL,3XL,4XL	**5393T56**	60.20

Chemical-Resistant Clothing

The specially formulated PVC (polyvinyl chloride) double-layer coating provides superior protection from acids, chemicals, and solvents. Made of durable polyester, these garments have heat-sealed seams to keep out spills and splashes. Meets FTMS 191A for flame resistance. Color is green.

Both ***jacket*** styles and ***coat*** have a snap front with storm flap. Jackets are 30″ long; coat is 48″ long.

Jacket and ***coat*** also have collar snaps for the ***detachable hood*** (sold separately).

Bib overalls include adjustable elastic suspenders.

Two-piece suit consists of jacket and bib overalls.

Two-piece suit with hood consists of hooded jacket and bib overalls.

To Order: Please specify size where necessary.

Welding & Heat-Protection Clothing

For welding gloves, see page 1777. For welding helmets and eyewear, see pages 1817-1819.

Sizing Guidelines for Welding and Heat-Protection Clothing

The chart at right is a general guideline for sizing. Proper fit varies with individual body shape and underclothing.

	S	M	L	XL	XXL	3XL	4XL
Chest	36-38	40-42	44-46	48-50	52-54	56-58	60-62
Waist	28-30	32-34	36-38	40-42	44-46	48-50	50-52

Lightweight Cotton Welding Clothing

Cotton provides cool, lightweight protection from minor sparks and low heat. This clothing is 9-oz. woven sateen (unless noted) and chemically treated for flame resistance. Color is green, unless noted. **To Order:** Please specify size when necessary.

All ***jackets*** have an inside left chest pocket and snap closures on the front and wrists. ***Extra-weight jacket*** is made from a heavier 12-oz. fabric for added durability. ***Leather-sleeve jacket*** keeps you cooler and more comfortable than all-leather garments. It has a flame-resistant cotton body and side-split cowhide sleeves that are specially tanned to provide superior heat and spark resistance. Sleeve seams are double stitched with Kevlar thread. Color is blue with tan sleeves.

Coat has snap closures on the front and wrists. ***Pants*** have a zipper-fly front, belt loops, two waist pockets, and two rear pockets. ***Coveralls*** have snap closures on the front and wrists, an inside left chest pocket, two waist pockets with side slits, and two rear pockets.

Sleeves protect your wrists and arms. Elastic on both ends provides a secure and snug fit. If you need additional upper body protection, ***cape sleeves*** with collar cover your wrists, arms, and chest. They have snap closures on the front, wrists, and across the chest. For further lower body protection, easily snap our ***cape-sleeve bibs*** (sold separately) across the bottom of the cape sleeves.

All aprons are one size fits all. ***Bib aprons*** cover your chest to your knees and tie at the waist. ***Split-leg bib aprons*** extend the coverage area to just below your knees and allow greater freedom of leg movement. They have a reinforced crotch and leg ties.

Flame-Resistant Hoods

Get superior protection from fire and heat. These soft hoods have a tightly woven two-ply top, and the bottom drapes over your shoulders for added protection. All are washable and one size fits all. Meet OSHA and 1971 NFPA standards (rev. 2000).

Nomex offers superior durability.
PBI gives you maximum comfort.
P-84 is the best choice for removing perspiration.
Carbon fiber provides the best flame resistance.

Material	Color		Each
Nomex	White	52655T15	$32.73
PBI	Brown	52655T14	34.49
P-84	Yellow	52655T16	35.56
Carbon Fiber	Black	52655T17	40.19

For sizing guidelines, see page 1792. For additional heat-protection gloves, see pages 1778-1779.

Heavy Duty Leather Welding Clothing

Flexible, durable, and cut resistant, this leather clothing offers superior protection from sparks and slag. The leather is chrome-tanned for improved heat and flame resistance, and clothing is sewn with Kevlar thread. Color is brown, unless noted.

All ***jackets*** have a snap front. ***Heavyweight jacket*** provides added heat and flame resistance. ***Chaps*** have snaps on the legs and an adjustable waistband. Inseam is 29″.

All aprons are 24″ wide. ***Waist aprons*** cover your waist to just below your knees and have leather ties. ***Bib aprons*** cover your chest to your knees. They have a center seam and leather ties at the neck and waist. ***Split-leg bib aprons*** extend the coverage area to just below your knees and allow more leg movement. They have a center seam, reinforced crotch, nylon ties around the neck and waist, and two adjustable nylon straps on each leg except 5239T48, which has three.

Cape sleeves provide upper body protection, covering your wrists, arms, and chest. They have snap closures on the front, wrists, and across the chest. For additional lower body protection, easily snap our ***cape-sleeve bibs*** (sold separately) across the bottom of the cape sleeves. ***Rod holder*** can hold about 5 lbs. of welding rods and has a clip to attach to a belt loop. ***Ankle and foot guards*** have a snap-button closure and adjustable instep strap. ***Shin and foot guards*** have a hook-and-loop closure. ***Sleeves*** protect your wrists and arms. They have snap closures on the wrists and an adjustable strap on the upper arm.

To Order: Please specify size where necessary.

Heat-Reflective Aluminized Clothing

The outside of this clothing is aluminized to reflect radiant heat—ideal for steel mills, foundries, and glass plants. Clothes have no pockets to trap hot sparks or splashes and are oversized to fit over work clothes.

Rayon is a sturdy 15-oz. fabric that provides good radiant heat and moderate spark protection. ***Kevlar blend*** is a heavyweight 19-oz. fabric that combines the high heat resistance of Nomex fibers with the excellent abrasion and cut resistance of Kevlar. ***Carbon Kevlar*** is a 19-oz. fabric (unless noted) for longer wearing and heavier duty than the Kevlar blend. ***PBI blend*** is a 7-oz. fabric that includes Kevlar fibers for high strength and extremely high heat resistance. It offers high strength and durability like the three materials above, plus it's lightweight.

Jacket, coat, and ***coveralls*** have snaps at the wrist, a flap front with covered snaps and leather pull tabs for easy removal (unless noted), and a stand-up collar that's lined with green flame-resistant cotton. ***Pants*** have a snap fly and leather belt loops. ***Hood with face shield*** covers your head, neck, and shoulders, and uses an adjustable ratchet suspension to fit on your head. There's enough room inside to wear glasses, goggles, or a respirator. The face shield is 7″ × 11″ and made of clear polycarbonate. ***Apron*** is 24″ wide. It has adjustable cotton-web neck and waist straps.

Gloves are aluminized on the back of the cuff, hand, fingers, and thumb. Palm is 22-oz. Kevlar blend; lining is wool with cotton knit. ***Boots*** have a flame-resistant cotton lining, polymer grip soles that are sewn and riveted, and a zipper closure. They are 12″ high and fit up to men's size 13.

To Order: Please specify size where necessary.

Voltage Classifications

When choosing electrical equipment, make sure you pick the right protection for the job. The chart at right identifies the six ASTM voltage classes by their proof test voltages and maximum use voltages.

Class	00	0	1	2	3	4
AC Proof Test Volts	2,500	5,000	10,000	20,000	30,000	40,000
AC Max. Use Volts	500	1,000	7,500	17,000	26,500	36,000

Electrical Protection Gloves, Glove Protectors, and Sleeves

Protect yourself when in contact with live electrical equipment. For glove sizing information, see page 1766.

Gloves are made of seamless dielectric rubber and have a curved-hand design and rolled cuffs. Gloves are manufactured in accordance with ASTM specifications and are inspected, tested, and stamped with inspection date. Color is black. *Wear-indicating gloves* have an orange liner that shows through when the outside layer is worn or damaged.

To Order: For Class 00-Class 3 gloves, please specify size: 8, 9, 10, 11, or 12, unless noted. For Class 4 gloves, specify size: 10, 11, or 12.

Glove protectors are made of leather and worn over gloves for abrasion resistance. *Note:* They should not be used without rubber gloves when working with live electrical equipment. All have a gunn pattern and gauntlet cuff except the 10″ lengths, which have slip-on cuffs. Classes 00 and 0 are made of goatskin. Color is pearl. Classes 1-4 are made of buffed cowhide. Color is red with orange cuffs.

To Order: Please specify size: 8, 9, 10, 11, or 12. *Note:* Protectors should be the same size as the gloves they will be worn over.

3	27¾″	L	5574T46	422.15

Sleeve Accessories

Sleeve straps are worn across your shoulders and have four buttons to hold sleeves in place. They're 15″ long.

5574T31 ..... **Per Pair** $17.08

Sleeve bag is canvas, 30″ long, and holds one pair of sleeves.

5574T41 ..... **Each** $54.64

Electrical Protection Blankets, Sheeting, and Line Cover

Line Cover

Offering quick, portable protection from contact with a nearby power line, this cover is made of lightweight polyethylene and meets ASTM F712 and F968. Color is yellow with a black lining to indicate wear.

Class	Lg.	ID		Each
3	5 ft.	1.77″	2363T11	$140.40

Blankets

Wrap these rubber blankets over and around irregularly shaped line hardware and equipment to protect against contact with high voltage. Blankets are manufactured in accordance with ASTM specifications and are inspected, tested, and stamped with inspection date. Class 0 blanket is 1/16″ thick; Class 2 and 4 blankets are 1/8″ thick.

Hook-and-loop style blanket is held in place by hook-and-loop strips. *Eyelet* style blankets have six 5/8″ dia. eyelets and can be tied down to easily secure them in place.

Class	Style	Color	Size		Each
0	Hook and Loop	Yellow	36″×36″	5571T14	$170.78
2	Eyelet	Black	36″×36″	5571T12	140.25
4	Eyelet	Orange	36″×36″	5571T15	148.41

Neoprene/SBR Rubber Sheeting

This 1/32″ thick yellow sheeting resists flame, oil, and ozone. It can be easily cut with scissors or a utility knife. Meets ASTM D178, Type II.

Class	Wd.	Full Roll		Per Ft. Partial Roll	Per Ft. Full Roll
0	36″	30 ft.	87195K33	$23.17	$18.54

Accessories

Clamping pin holds line covers and blankets in place. It's made of fiberglass-reinforced nylon and can accommodate diameters up to 5″. ***Canister*** safely stores up to four of your 36″×36″ rubber blankets. It's made of safety-orange polyethylene.

		Each
Clamping Pin	5571T24	$15.82
Canister, 7″ Dia.×37″ Lg.	6129T3	96.49

Electrical-Glove Tester

Don't wait until you're in the middle of a job to find out your gloves have a defect. Use this manually operated air pump to test electrical-protection gloves and other rubber insulated gloves.

It's easy to use—just stretch the glove cuff over the grooved housing, secure it with the hook-and-loop strap, and inflate. Tester includes a red cotton duck storage bag.

9690T11 ..... Each $283.98

Electrical Protection Footwear

For extra heel protection when climbing ladders and poles, slip these dielectric rubber shoes and boots right over your street shoes. They have a deep heel cavity and antiskid sole that makes it easy to lock onto ladder rungs and stair edges. This footwear is waterproof. They meet ASTM F2413-05 and are tested to 20,000 volts AC. Color is yellow and black.

For information about footwear sizing, see page 1781.

Overshoes come in half and full sizes except 12½. ***Boots*** have an adjustable side strap and come in full sizes.

To Order: Please specify men's shoe size.

Overshoe

Boots	17″	7-15	**50065T3**	130.86

High-Voltage Switch Operating Sticks

Also known as hot sticks, these insulated sticks let you operate high-voltage switches from a safe distance. Rated for 100,000 volts; all meet or exceed ASTM F711 for fiberglass-reinforced plastic rod and tube used in live-line tools.

Standard sticks are 1.25″ dia. They're made of filament fiberglass bonded to a rigid, closed-cell polyurethane foam core.

Telescoping sticks extend to reach switches at multiple heights and the universal head allows 180° of adjustment. They're approximately 2″ dia. at base and 1.15″ at tip. Sticks are made of filament fiberglass; tip has a rigid, closed-cell polyurethane foam core. Lock and release with the push of a button.

Pole and Tree Climbers

Quickly and easily adjust these climbers to give you the perfect fit for climbing poles and trees. All climbers and replacement parts meet ASTM standards. Climbers adjust from 16¼″ to 18¾″ in increments of ½″. All have a steel shank with offset stirrup and conform to the leg for comfort. Max. cap. (including tools and equipment) is 350 lbs.

Pole climbers have a 1¾″ long gaff.

Tree climbers have a 2¾″ long gaff.

Electrical Arc Flash Protection Clothing

Protect yourself from hazardous flames and electrical arcs with these garments. Color is navy blue.

Category 0-2— Made of single-ply Indura Ultra Soft fabric that's 88% cotton and 12% nylon. Meet ASTM standards and NFPA 70E for Category 0-2 protection. *Shirt* has a button front and wrists and two chest pockets with flaps. *Coverall* has a two-way zipper front, snap wrists, and six pockets. *Pants* have a zipper fly, snap waist, and four pockets.

Category 3-4— Made of a 4-ply Nomex and Kevlar construction. Meet OSHA and ASTM standards and NFPA 70E for Category 3-4 protection.

Jacket and *coat* have a covered zipper front and Nomex knit wrists. *Pants* have a zipper fly and a knee-to-ankle zipper on each leg. They also include suspenders. *Hood* includes a hard hat with adjustable ratchet suspension and a polypropionate face shield with an antifog coating.

To Order: Please specify size where necessary using chart below.

Gloves are sold separately on page 1794. Face shield is sold separately on page 1816.

Insulated Nylon Clothing

Light duty garments have a quilted nylon outer shell, 7.5-oz. polyester fiberfill insulation, polyester lining, and two waist pockets. Color is blue. *Jacket* has a zipper front, knit collar, and knit wrist cuffs. *Coveralls* have a snap front, fleece-lined collar, knit wrist cuffs, and a hip-to-ankle two-way zipper with storm flap on each leg.

Heavy duty garments protect you in bitterly cold conditions. They're also more abrasion resistant than light duty clothing. All except face mask have a tough nylon outer shell, 11.25-oz. polyester fiberfill insulation, and a nylon lining, unless noted. Color is midnight blue. *Coat*, *parka*, and *hooded coveralls* have knit wrist cuffs, three front pockets, and a polyester lining. *Coat* and *parka* have a zipper front and snaps for the detachable hood (sold separately). *Bib overalls* and *hooded coveralls* have a thigh-to-ankle zipper with storm flap on each leg. *Bib overalls* have a high-rise back and adjustable elastic suspenders. *Detachable hood* is lined with polyester and has snaps for attaching to coat or parka. *Face mask* is made of thermal knit and pulls down over the head to cover the entire head and neck. It includes a detachable quilted face piece to protect the mouth.

To Order: Please specify size where necessary.

Made of tightly woven 12-oz. cotton duck, these garments are abrasion and tear resistant. All have 5-oz. polyester insulation and quilted nylon lining except 53215T52, which has a quilted lining in the sleeves only and a blanket lining inside the jacket. Color is brown. **To Order:** Please specify size where necessary.

Jacket has a zipper front, corduroy collar, two lower front pockets, inside pocket, knit cuffs, and knit waist.

Hooded jacket has a zipper front, drawstring hood, knit wrist storm cuffs, knit waist, two lower pockets, and one inside pocket.

Coat has button front, corduroy collar, two chest pockets (one pocket has a button closure), one inside pocket, and two waist pockets.

Pull-over hood has an extra-long, thick knit collar and a drawstring.

Both ***bib overalls*** and ***coveralls*** have a snap-over front fly, two waist pockets, two rear pockets, a banded waist, and a hammer loop.

Bib overalls have adjustable elastic suspenders, two chest pockets, and a knee-to-ankle zipper with snap storm flap on each leg. Sizes listed in the table at left are waist sizes. If you plan to wear heavy clothing under overalls, order one size larger than your normal waist size for proper fit.

Coveralls have a corduroy collar, knit wrist cuffs, two zippered chest pockets, a zipper front, pencil pocket, ruler pocket, and hip-to-ankle zipper with snap storm flap on each leg. Sizes listed in the table at left are chest sizes.

For information about selecting the proper clothing size, see page 1796.

Knit Hats and Earmuffs

Hat and ***face mask*** are form-fitting acrylic. ***Earmuffs*** wrap around the back of your head and adjust for a secure fit. They're made of lightweight, double-layer fleece and fold compactly for storage.

	Color	Size		Each
Hat	Black	One Size	56305T221	$10.50
Face Mask	Black	One Size	56305T241	17.50
Earmuffs	Black	One Size	2403T7	17.86

Hooded Sweatshirt Jackets

Get the comfort of a sweatshirt combined with the ruggedness of a jacket. Shell is made of 80% cotton/20% polyester heavyweight fleece for extra warmth. Jackets have a 65% cotton/35% polyester lining, zipper front, and knit bottom and cuffs.

Regular jackets are for heights 5′8″-5′11″; length is 26″. *Tall* jackets are for heights 6′-6′3″; length is 28″.

Flotation Vests, Jackets, and Life Preserver Ring

Work safely near water with these flotation aids. All are international safety orange with reflective tape panels. Jackets and vests have soft flotation foam for comfort.

Standard vest has a tough nylon shell that covers multiple foam flotation panels. It has a zipper front and buckle closure.

Mesh-top vest has a mesh upper half for ventilation to keep you cool. A tough nylon shell covers the foam construction. Vest has a zipper front with two buckles and two pockets.

Adjustable vest has a PVC-coated, three-piece construction and the shoulder straps adjust for a sure fit. Secure with two front buckles.

Vest with flotation collar provides extra protection. It has a nylon shell, mesh lining, and hinged back. Secure with two buckles.

Jacket is 26″ long. It has a nylon shell, plastic zipper front, and six pockets: two chest, two side, one sleeve, and one inside chest.

Personal flotation device (PFD) inflates automatically when submerged in water, or you can inflate it manually. It has a heavy duty nylon shell, one pocket, and buckle closure.

Life preserver ring is made of molded polyurethane to resist common chemicals, oils, and UV rays. It has a 30″ OD and 18″ ID. The encircling rope is 120″ long and made of ⅜″ dia. polypropylene.

Fall-Arrest Harnesses and Lanyards

Fall-arrest equipment limits the amount of force a person is subjected to in the event of a fall. When used properly, these systems help you comply with ANSI standards Z359.1-2007 and A10.32 (unless noted) and applicable OSHA standards. For a complete system you need a harness, a shock-absorbing lanyard or quick-stop retractable lanyard (see pg. 1799; requires a self-locking carabiner hook), and an anchor point connector.

Harnesses

Pullover Style

Vest Style Standard

Vest Style Comfort-Padded Polyester

Vest Style Easy-On Polyester

All harnesses have one or more steel D-rings that serve different functions based on their location. *Back D-rings* are for fall arrest and travel restriction. *Hip D-rings* are for worker positioning and travel restriction. *Chest D-rings* are for ladder climbing and lifting and lowering of workers. *Shoulder D-rings* are also for lifting and lowering.

Nylon is soft and offers some flexibility.

Polyester has good chemical resistance to withstand harsh environments.

Pullover-Style Harnesses— Go on over your head.

Vest-Style Harnesses— Go on like a jacket.

Comfort-stretch polyester harnesses stretch like a bungee cord to move with you for a comfortable fit.

Comfort-padded polyester harness has padded shoulders and a back support.

Easy-on polyester harnesses have a mesh vest to eliminate tangles.

▲ Does not have a chest D-ring. ● Max. capacity for XXL size is 400 lbs. ■ Does not meet ANSI A10.32.

Shock-Absorbing Lanyards

Use shock-absorbing lanyards to connect your harness to an anchor point connector (see page 1799). A built-in shock absorber reduces impact and brings you to a smooth halt. All have double-locking zinc-plated steel snap hooks for a secure hold.

Nylon is soft and offers some flexibility. *Polyester* has good chemical resistance to withstand harsh environments.

(B) Super-stretch webbing lanyards stretch when you need additional reach, then return to their original length.

(C) Tie-back webbing lanyard and anchor strap eliminates the need for a separate tie-off strap anchor point connector. Wrap the lanyard around an anchor point and tie off using the snap hook on the built-in anchor strap.

(D) Twin webbing lanyard has two straps that allow you to remain connected to your anchoring point with one strap while attaching the other strap to a different anchoring point.

Length	Max. Cap., lbs.	Length After Fall	Material	Snap Hook Opening Size		Each
(A) Webbing Lanyards

■ Does not meet ANSI A10.32.

Heat-Resistant Fall-Arrest Harness and Lanyard

Pair up this harness and a lanyard for fall-arrest protection in extreme heat applications such as welding. A complete system also requires an anchor point connector (sold separately on this page). When used properly, system meets ANSI standard Z359.1-2007 and applicable OSHA standards.

Harness has Nomex webbing that resists heat up to 700° F and a polyester inner core. Thigh buckles are slide style.

Shock-absorbing lanyard is made of abrasion-resistant steel wire rope with a clear vinyl coating. It has a built-in shock absorber to reduce impact and bring you to a smooth halt. Double-locking steel snap hooks provide a secure hold.

Harness

Maximum capacity is 310 lbs. Harness has one steel back D-ring.

Fits Waist		Each
One Size (26″-46″)	8263T15	$211.14

Shock-Absorbing Lanyard

Maximum capacity is 310 lbs. Snap hook opening size is 3/4″. For an illustration of length after fall, see page 1798.

Lg.	Lg. After Fall		Each
6 ft.	9 1/2 ft.	8263T2	$101.00

Quick-Stop Retractable Fall-Arrest Lanyards and Carabiner Hooks

Stop your fall in just a few inches with these retractable lanyards. Use in conjunction with a harness, a self-locking carabiner hook, and an anchor point connector (all sold separately). When used properly, system meets ANSI standards Z359.1-2007 and A10.32 and applicable OSHA standards.

In the event of a fall, the internal braking system activates, stopping and limiting the amount of force from the fall. Lanyards enable freedom of movement while working off the ground, extending and retracting as you move. All have stainless steel internal components (unless noted) for corrosion resistance and swivel to reduce twisting and tangling. A self-locking snap hook with 3/4″ opening is located at the end of each lanyard to connect to the back D-ring of a harness.

Webbing lanyards have a thermoplastic housing. *Polyester lanyards* are CSA certified. Increase the maximum capacity of 8091T31 and T32 to 400 lbs. by attaching an *optional shock-absorbing pack*.

Wire rope lanyards resist abrasion. *20-* and *30-ft. lanyards* have a polyethylene and aluminum housing. *50-ft. lanyards* have an aluminum and stainless steel housing that's sealed to protect internal components against dirt and corrosion.

★ Internal components are stainless steel, zinc-plated steel, and aluminum. ■ Internal components are stainless steel, carbon steel, and aluminum.

A ***self-locking carabiner hook*** is required to connect a quick-stop retractable lanyard to an anchor point connector. Connect only one lanyard to a carabiner at any time. Made of steel.

Opening Size (A)		Each
11/16″	8091T21	$43.55
13/16″	8091T22	77.31
2 3/16″	8091T23	84.87

Electrical Arc Flash Protection Fall-Arrest Harness and Lanyard

In addition to meeting ASTM F887-05 arc flash requirements, Kevlar webbing gives this harness and lanyard fire retardance and excellent durability. A complete system also requires an anchor point connector (sold separately). When used properly, system meets ANSI standards Z359.1-2007 and A10.32 and applicable OSHA standards.

For arc flash protection clothing, see page 1795.

Harness has a Nomex lining for comfort and quick-connect thigh buckles. Metal components are leather insulated.

Shock-absorbing lanyards have a built-in shock absorber to reduce impact and bring you to a smooth halt. Double-locking steel snap hooks provide a secure hold.

Harness

Maximum capacity is 400 lbs. Harness has one back D-ring made of Kevlar webbing.

Fits Waist		Each
One Size (32″-56″)	1785T1	$262.71

Shock-Absorbing Lanyards

Lanyards are 6-ft. long and have a 3/4″ snap hook opening. Length after fall is 9 1/2 feet. For an illustration of length after fall, see page 1798.

Min. Capacity	Max. Capacity		Each
130 lbs.	310 lbs.	1785T4	$143.55
310 lbs.	400 lbs.	1785T6	162.82

Anchor Point Connectors

Secure lanyards to an anchor point such as an I-beam or post.

(A) Tie-off straps are good for temporary anchoring. They have a wear pad that protects the webbing from abrasion. Strap is polyester; rings are zinc-plated steel. Maximum capacity is 420 lbs.

(B) D-ring plate is for permanent anchoring. D-ring is alloy steel. Plate is Type 304 stainless steel and has 9/16″ dia. mounting holes (fasteners not included). Maximum capacity is 420 lbs.

(C) I-beam anchor remains stationary for use in vertical and horizontal I-beam applications where movement cannot be tolerated. Made of galvanized steel. Fits I-beams with a flange width of 4″-8″ and maximum thickness of 1/2″. Maximum capacity is 310 lbs.

(D) Rolling I-beam anchor can be used with an overhead I-beam as well as one at your feet, providing an anchor as you walk along the beam. Housing is aluminum. Fits I-beams with a flange width of 4″-12″ and maximum thickness of 1 1/4″. maximum capacity is 310 lbs.

(E) Glide-along trolley provides maximum mobility on I-beams. Wheels have double-shielded, corrosion-resistant wheel bearings for smooth movement. Trolley is steel. Fits I-beams with a flange width of 3″-8″ and maximum thickness of 11/16″. Maximum capacity is 420 lbs.

Fall-Arrest Rope Grabs

For Nylon and Polyester Rope

For Wire Rope

In the event of a fall, these rope grabs lock onto the line, halting descent. Use with a vertical rope lifeline and a shock-absorbing lanyard. All are corrosion resistant. When used properly, these grabs help you comply with OSHA standard 1910.66.

Grab ***for nylon and polyester rope*** moves with you as you ascend or descend the line.

Grab ***for wire rope*** must be moved manually.

Grab Material	Max. Cap.	For Rope Dia.		Each
For Nylon and Polyester Rope				
Anodized Aluminum	310 lbs.	5/8″ to 3/4″	**8201T51**	$138.12
For Wire Rope				
Type 304 Stainless Steel	310 lbs.	5/16″ to 3/8″	**8201T68**	170.10

Leg Support Strap

Attach one leg support to each thigh strap of any fall-arrest harness and prevent suspension trauma that can occur from hanging vertically and motionless. In the case of a fall, the strap is easily deployed. Place foot into a looped step so your leg muscles can be flexed to keep blood flowing.

Max. Cap.		Each
400 lbs.	**5695T5**	$20.95

Suspension Seat

Lift workers over and into difficult-to-access areas. This equipment has a foam padded aluminum seat, 1 3/4″ wide adjustable nylon webbing, and two carabiners. Seat is 16 1/2″ Wd. × 5″ Dp. × 3/4″ Thick.

Note: Seat requires a back-up fall-arrest system while in use.

Max. Cap.		Each
310 lbs.	**7936T31**	$195.24

Confined-Space Rescue Systems

Provide fall protection and emergency rescue for workers in tight spots. Brakes lock in place in the event of a fall; use the lifeline's crank handle to lift or lower worker to safety. Furnished with a lifeline, steel snap hook, pulley, carabiner hook, aluminum tripod stand, mounting bracket to attach lifeline to tripod, 3/16″ dia. wire rope, two equipment bags, and an instructional manual and video.

Tripod stand spans openings up to 70″ dia. Systems require use of a harness (see pages 1798-1799). When used properly, they help you comply with ANSI Z359.1-2007 and A10.32.

Rope Lg.	Max. Cap.	***Galv. Steel Wire Rope***	Each	***Type 304 SS Wire Rope***	Each
50 ft.	310 lbs.	**8165T81**	$3,764.32	**8165T78**	$3,842.00
100 ft.	310 lbs.	**8165T96**	4,319.14	**8165T79**	4,487.72

Positioning Belts and Lanyards—*Not for Use as Fall-Arrest Equipment*

Keep workers away from areas of potential free fall. Combine a belt and a lanyard to restrict an individual's travel within a specific distance from an anchor point. Connect one end of the lanyard to a D-ring on the belt; attach the other end to an anchor point connector. For fall-arrest equipment, see pages 1798-1799.

Polyester webbing has good chemical resistance to withstand harsh environments.

Belts

All belts have a traditional steel buckle, steel D-rings, and polyester webbing. **To Order:** Please specify belt size from chart.

Lined belts offer added comfort and durability. All are lined with synthetic leather.

Polyester-padded belt provides extra support and comfort.

Polyester-padded belt with integral rope lanyard has the benefits of the padded belt above, plus a polyester lanyard that's permanently attached. One end of the lanyard is spliced to a D-ring; the other end has a double-locking steel snap hook for attaching to an anchor point connector.

Max. Cap., lbs.	No. of D-Rings		Each
(A) Lined Belts			
310	1	**8062T333**	$48.76
310	2	**8062T444**	59.61

4 ft. to 6 ft. (Adjustable)	310	5/8″	**7941T25**	58.20

Wrist-Strap Rescue Line

Pull workers from a confined space. This rescue line consists of two 3-ply nylon wrist straps attached to a 1/2″ Dia. × 4 1/2 ft. Lg. nylon rope. Each strap has two traditional buckles; rope is threaded through a steel D-ring. Meets OSHA 29 CFR 1910.

Max. Cap.		Each
310 lbs.	8081T1	$113.77

Ladder Climbing Systems

Install these easy-to-adjust systems on ladders of towers, bridges, and shafts using the included hardware. You supply your own harness with chest D-ring and a carabiner hook (sold separately on pages 1798-1799) and a wire rope grab (sold separately below).

Use with ladders that have a 1″ maximum rung dia. The anchor bracket has an adjustable eyebolt so you can control the tension of the 3/8″ dia. galvanized steel wire rope. In the event of a fall, the shock-absorbing brake stops you within inches.

Up to two people (maximum 310 lbs. each) can use a system at a time—the only requirement is that each person has their own fall-arrest equipment. When properly installed, these systems help you comply with ANSI standard A14.3 and OSHA 1910.27.

Rope Grab

Rope Lg.		Each
50 ft.	8272T61	$235.00
100 ft.	8272T62	324.64
Wire Rope Grab	8272T73	Each $150.00

Shower Stations

Just pull the handle to flush chemicals and other dangerous materials from your eyes and body. These stations connect to a permanent water source and include an identification sign. Meet ANSI Z358.1.

For an automatic water mixing valve to keep water flowing in case of emergency, see 6208T on page 505.

Choose the pipe material that suits your environment.

Galvanized steel offers some corrosion resistance.

Coated galvanized steel has an orange powder-coated finish for added corrosion resistance.

PVC holds up against caustic chemicals.

Type 304 stainless steel offers superior corrosion resistance.

Showers

All have a 10″ dia. shower head. Valve is chrome-plated brass except showers with a Type 304 stainless steel pipe, which have a Type 304 stainless steel valve.

Wall- and ***ceiling-mount*** showers have a 1″ NPT female supply connection.

Floor-mount showers have a 1 1/4″ NPT female supply connection. All have a mounting flange (fasteners not included). 5201T21 and 5580T24 have 3/8″ dia. holes; 54255T9 has 5/8″ dia. holes.

Material		Wall Mount		Ceiling Mount		Floor Mount

▲ Does not have a pipe. Shower head connects directly to the valve.

Showers with Eye and Eye/Face Wash

These convenient stations combine a shower with an eye wash or an eye/face wash. All have a 10″ dia. shower head and 1 1/4″ NPT female supply and waste connections except 5627T121 and T123, which have 2″ IPS female socket weld supply and waste connections. Stations have a floor-mounting flange with 3/8″ dia. holes except 5627T121 and T123 and 55525T2 and T8, which have 5/8″ dia. holes (fasteners not included). ***Eye/face washes*** have larger spray heads than eye washes for increased flow.

Covered-bowl stations, ***open-bowl*** stations, and stations ***without bowl*** have dual spray heads for eye and eye/face washes except 55525T8, which has four spray heads. Covered-bowl stations have a Type 304 stainless steel cover.

ADA-compliant open bowl station has four eye/face spray heads, a longer pull handle, and an extended bowl mounted at an accessible height. Meets ANSI 117.1 as a barrier-free station.

ABS plastic bowl is 11 3/4″ dia.; *Type 304 stainless steel* bowl is 11 1/2″ dia.

For accessories, see page 1803.

With Open Bowl Eye/Face Wash

Freeze-Resistant Shower and Eye/Face Wash Stations

Keep water flowing to these stations despite freezing temperatures. Use outdoors or in other areas where your permanent water supply is frequently exposed to cold. Eye/face washes do not have a bowl—the piping automatically drains to prevent freezing. Shower head is ABS plastic. Pipe is galvanized steel.

Through-the-wall station allows the shower head and eye/face wash to be installed in an unheated area, but the valve must be installed in an area not exposed to the cold. For use with walls up to 12″ thick. Shower head is 8⅜″ dia. Valve is chrome-plated bronze; spray arms are ABS plastic. Shower has a 1¼″ NPT female supply connection; eye/face wash has a ½″ NPT female supply connection.

Heated stations supply water in temperatures as low as –50° F. A combination of heating tape and insulation surround the piping to prevent the water from freezing. Housing is ⅛″ thick ABS plastic. The heating tape is controlled by the included thermostat, which has a temperature range of 60° to 70° F. The thermostat is housed in a NEMA 4 junction box with pilot light, operates on 120 VAC, 60 Hz, and must be hardwired. Shower head is 8″ dia. Valve and spray arms are chrome-plated brass. Supply connections are 1″ NPT male. FM approved. UL listed. Floor mounting flange has ½″ dia. holes (fasteners not included).

Hazardous-location station is UL listed for Class I, Division 2, Groups B, C, and D.

		Each
Through-the-Wall Station	9120T58	$1,145.29
Heated Station	9789T45	2,814.38
Hazardous-Location Heated Station	9789T47	3,040.05

Eye and Eye/Face Wash Stations

Identification Sign (included with all stations)

Flush away contaminants at one of these stations. They connect to a permanent water source and come with a dust cover (except covered bowl) and identification sign. Meet ANSI Z358.1. ***Eye/face wash*** stations have larger spray heads for increased flow.

Type 304 stainless steel bowl is 11½″ dia.; *ABS plastic bowl* is 11¾″ dia.

Covered bowl stations have a Type 304 stainless steel bowl cover that prevents contamination and lifts when you push the flag handle.

Stations ***without bowl*** are for use with a floor drain.

For accessories, see page 1803.

Pedestal-mount stations have a floor-mounting flange with ⅜″ dia. holes (fasteners not included). *Galvanized steel pipe* offers some corrosion resistance. *Powder-coated galvanized steel pipe* has an orange finish for added corrosion resistance.

Wall-mount stations have a mounting bracket with ⅜″ dia. holes except station without bowl, which has 7⁄16″ dia. holes (fasteners not included). Stations connect to the valve with a chrome-plated brass pipe and elbow.

Bench-mount stations accommodate surfaces ⅛″ to 1½″ thick. They have an extension spray arm and a head that swivels 90°.

Faucet-Mount Eye Wash Stations

Transform almost any standard faucet into an eye wash station—just remove the aerator and thread one of these stations onto the faucet.

Note: Not to be used as a substitute for an ANSI-compliant wash station. Use cold water supply only.

Stations have dual chrome-plated brass spray arms and forward-angled heads. The on/off valve has 55/64″-27 female aerator threads. Stations also include adapters for 15/16″-27, 13/16″-27, and 3/8″ NPT as well as a pair of dust covers.

Drench Hose Sprayers

Bench Mount

Wall Mount

Wall Mount with Coiled Hose

Control the direction of water while flushing contaminants from your eyes, face, and body. These sprayers have two spray heads and meet ANSI Z358.1 standards for eye washes and drench hoses. Valve and arms are chrome-plated brass. Bench-mount sprayer requires a 1 3/8″ dia. cutout. Both wall-mount styles have 1/4″ dia. holes (fasteners not included).

Bench- and ***wall-mount*** sprayers are activated by squeezing the handle. The handle is self-closing and includes locking clip for converting to stay-open operation.

Wall mount with coiled hose sprayer has a stay-open flag handle.

	Hose Material	Hose Lg.	Connection		Each
Bench Mount	PVC	8 ft.	3/8″ NPT Male	5623T41	$296.46
Wall Mount	PVC	8 ft.	3/8″ NPT Male	5623T31	289.38
Wall Mount w/ Coiled Hose	Nylon	12 ft.	3/8″ NPT Female	9721T121	318.04

Portable Eye Wash and Drench Hose Tanks

Pressurized to deliver a continuous flow of water, this tank complies with ANSI Z358.1 by providing a minimum of 0.65 gpm for 15 minutes. A gauge and safety relief valve prevent over-pressurization. Tank is Type 304 stainless steel with a built-in carrying handle and includes 8 oz. of antibacterial additive. Has an eye wash with two spray heads and a stay-open valve. The drench hose lets you direct spray to affected areas and has a self-closing squeeze handle. Hose is 6 ft. long and made of PVC.

Change Cycle	Tank Size, Dia. × Ht.	Capacity, gal.		Each
6 months	16″ × 39″	15	5420T23	$997.72
Antibacterial Additive Refill (8 oz.)			54285T29	12.67

Foot Treadle and Drench Hoses for Eye Wash and Eye/Face Wash Stations

Foot treadle attaches to the base of your stainless steel pedestal-mount wash station (with or without shower station) to provide hands-free operation. Furnished with a pull chain and mounting hardware. Made of Type 304 stainless steel.

55525T7 ..... **Each** $104.44

Drench hoses are intended for use with eye and face wash stations (except bench mount). Hoses have one spray head and a chrome-plated brass valve.

Unmounted and *direct-mount* drench hoses have a self-closing squeeze handle. Use the unmounted hose with your own mounting system or as a replacement unit. Direct-mount hose attaches to a wash station and comes with a mounting bracket and fasteners.

Wall-mount with coiled hose has a stay-open flag handle and a mounting bracket with 1/4″ dia. holes (fasteners not included).

Hose Lg.	Hose Material	Connection		Each
Unmounted				
8 ft.	PVC	3/8″ NPT Male	5623T2	$190.87
Direct Mount				
8 ft.	PVC	1/2″ NPT Female ▲	5535T21	224.89
Wall Mount with Coiled Hose				
12 ft.	Nylon	3/8″ NPT Female	9721T11	292.22

▲ Also has a 1 1/4″ NPT female adapter for use with a shower.

Shower Test Kit and Privacy Curtain

Shower Test Kit

Privacy Curtain

Shower test kit includes a nylon water diverter, three-piece PVC rod, and a 5-gal. catch bucket.

Privacy curtain is yellow nylon. It comes with a gray powder-coated steel rod that assembles into a 52″ dia. hoop. Hardware for mounting to a shower pipe is included.

Shower and eye wash inspection cards are 3 1/8″ Wd. × 6 1/4″ Ht. cardstock. They have a reinforced eyelet and twist wire for hanging.

		Each
Shower Test Kit	9791T36	$48.43
Privacy Curtain	9790T69	243.57

Shower and Eye Wash Inspection Cards (10/Pkg.)	11145T5	$7.14

Self-Contained Eye Wash Stations

A

B

C

Mobile Polyethylene Container for Stations with Concentrate

D

E

Plumbing isn't necessary with these eye wash stations—simply pull to activate flow. All are made of polyethylene.

ANSI Compliant Stations— Meet ANSI Z358.1 by providing a minimum of 0.4 gpm for 15 minutes. All include a wall mounting bracket.

(A) Station without concentrate requires a saline solution concentrate (sold separately) and has a pull tray that covers the wash area to keep out contaminants when not in use. Station is green with a yellow tray and includes a drain hose. Mounting bracket has 3/8″ dia. holes (fasteners not included).

(B) Stations with concentrate include saline solution concentrate and have a lockable fill cap to prevent tampering. All have a pull strap. Color is green. Mounting bracket has 1/4″ dia. holes (fasteners not included).
Heated station has twin 600-watt heaters. Ideal for use in temperatures from –32° to +72°F. Station has lights to indicate power on, heating on, and malfunction. Operates on 110 VAC, 60 Hz and has a 6-ft. cord with three-prong plug.
Mobile polyethylene container and *steel cart with container* let you collect and transport used solution.

(C) Station with sealed cartridges includes saline cartridges that don't require mixing. Cartridges last four times longer than most saline solutions. Pull the tray to break the cartridge safety seal and activate the wash. A built-in reservoir catches used solution. When the reservoir is full, a sign on the inside of the tray drops down to indicate that it's time to empty it. Station color is green. Mounting bracket has 1/4″ dia. holes (fasteners not included).

Supplemental Stations— Get relief when you can't immediately reach a compliant station or where a compliant station won't fit. All have a pull strap. Color is green. Mount stations to a wall or bench top. *Note:* Not be used as a substitute for an ANSI-compliant station.

(D) Station with concentrate has a built-in handle. It includes saline solution concentrate and a wall mounting bracket with 1/4″ dia. holes (fasteners not included).
Mobile polyethylene container lets you collect and transport used solution.

(E) Station with sealed cartridge includes a saline solution cartridge that doesn't require mixing. Pull the strap to break the cartridge safety seal and activate the wash. When cartridge is empty, simply remove and install a new one.
Wire storage rack holds up to four saline solution cartridges.

Personal Eye Wash Stations—*For Supplemental Use*

One-Bottle Wall-Mount Station

Two-Bottle Wall-Mount Station

Drench Bottle

Eye Cup/ Directed-Stream Bottle

Portable Station

A source of immediate relief for your eyes, these personal eye wash stations are for supplemental use. *Note:* Not to be used as a substitute for an ANSI-compliant station.

Wall-Mount Stations— Have clear polyethylene squeeze bottles.

Stations with drench bottles are made of green plastic and include mounting fasteners. The drench bottles flood the eye area with solution. Bottles are sealed with a tamper-resistant, twist-off tab.

Stations with eye cup/directed-stream bottles are made of green polystyrene and include a mirror. The directed-stream concentrates flow and eye cup reservoir prevents used liquid from reentering bottle. Solution not included. Eye cup has a cap. Stations have 1/4″ dia. mounting holes (fasteners not included).

Portable Station— Comes in a black vinyl bag with a strap. It includes 12 clear polyethylene squeezable drench bottles to flood the eye area with solution.

CPR Mouth Shields

Reduce the risk of contamination with these mouth shields. The one-way valve protects rescuer from victim's breath and fluids. Valve is in a rigid plastic tube surrounded by medical-grade clear vinyl that allows you to view victim's coloring and inspect for airway blockage. *Warning:* Not for use on children under 12.

Shield comes in a vinyl pouch.

Shield with gloves and alcohol wipes includes a pair of latex gloves and four alcohol wipes packed in a cardboard box.

		Each
Shield	55965T54	$9.19
Shield with Gloves and Alcohol Wipes	55965T55	11.39

Portable First-Aid Cases

Steel

Take your supplies anywhere in one of these convenient carrying cases. Cases are white and have 3/8″ dia. keyholes for mounting (fasteners not included). Polypropylene and 20-ga. steel have a gasketed lid to keep contents dry.

Steel cases have a divider.

	Overall Size, Ht. × Wd. × Dp.		Each
Polypropylene	4 9/16″ × 7 11/16″ × 2 3/8″	41035T16	$3.28
20-ga. Steel	9 1/16″ × 6 5/16″ × 2 3/8″	41035T17	17.05
24-ga. Steel	10 1/4″ × 14 3/4″ × 4 5/8″	41035T18	31.80

Bodily Fluid Clean-Up Kit

Safely and effectively clean up infectious material and fluids in compliance with OSHA requirements.

Kit contains a barrier gown, one pair of goggles, one pair of vinyl gloves, one pair of shoe covers, a surgical-style mask, two antimicrobial towelettes, absorbent compound, a scoop, surface disinfectant, two paper towels, an incident report sheet, and a biohazard disposal bag. Furnished in a polypropylene carrying case with 3/8″ dia. mounting holes (fasteners not included).

Overall Size, Ht. × Wd. × Dp.		Each
7″ × 10″ × 3″	14935T21	$23.46

Lockable First-Aid Cabinets

Acrylic Panel

Control access to supplies and medication. These wall-mount cabinets have a lock and two keys. There are three welded shelves, plus a pull-out shelf at the base that can be used as a work area.

Cabinets are 27″ Ht. × 18″ Wd. × 8″ Dp. and made of 23-ga. steel with a white powder-coated finish and 3/8″ dia. keyholes (fasteners not included) for mounting.

Door Style		Each
Acrylic Panel	5573T1	$202.90
Solid Steel	5573T7	210.93

Pop-Up Shelters

With One Door

With Two Doors

Just pop out two fiberglass tension frames and these shelters are ready to protect you from rain, snow, sun, and wind. The shelter fabric is urethane-coated polyester and is flame retardant to meet CPAI-84 (Canvas Products Association International). All have a zippered slit door, 9″x36″ netted window on the rear wall, a 10″ dia. vent port for use with blower or heater hose (not included), and a built-in carrying case. Color is white with high-visibility green lower side walls.

Shelters with two doors also have a zippered roll-up door.

Overall Size, Lg. × Wd. × Peak Ht.	Shelters with One Door	Each	Shelters with Two Doors	Each
6′ × 6′ × 6′8″	6214T11	$614.29	6214T21	$715.87

Emergency Oxygen-Supply Cylinders

Disposable

Refillable

Compact cylinders are easy to transport, so you'll have oxygen on hand until trained medical help arrives. Complete units include a filled oxygen cylinder, 7 ft. of tubing, a face mask, and a pressure gauge. Cylinders deliver 6 liters per minute.

Refillable cylinder has a second setting that delivers 12 liters per minute (20 minute oxygen supply). Furnished in a soft carrying bag with a shoulder strap.

Oxygen Supply, minutes	Complete Units	Each	Replacement Cylinder	Each	Replacement Mask	Each
Disposable Cylinder— *3″ Dia.×13½″ Ht.*

Digital Blood-Pressure Monitor

Get precise readings of blood pressure and pulse rates with this automatic monitor. It has a 30-reading memory and displays average of readings. Monitor includes a medium-size cuff (9.4″ to 14.2″) and a four-week pressure log. Operates on 120 VAC power adapter (included) or four AA batteries (not included).

Overall Size, Lg.×Wd.×Ht.		Each
4.3″×5.6″×2.5″	5261T15	$93.67
Optional Large Cuff (14.2″ to 17.7″)	5261T17	36.65
AA Batteries (4/Pkg.)	71455K53	Per Pkg. $2.94

Stretchers

Fold-Up Pole Stretcher Kit

Basket Stretcher

Fold-up pole stretcher folds lengthwise and in half for easy storage. Good for moving injury victims a short distance, it has sturdy aluminum poles and a durable vinyl-coated nylon cover. Overall size is 87″ Lg.×22″ Wd.×4½″ Ht. Maximum weight capacity is 350 lbs.

Fold-up pole stretcher kit includes a pole stretcher, a 62″×82″ wool-blend blanket, and a 54″×75″ vinyl sheet. Kit comes in a white-painted steel storage cabinet with handle. Cabinet is 47¾″ Ht.×8⅝″ Wd.×6½″ Dp. and has ¼″ dia. holes for wall mounting (fasteners not included).

Basket stretcher provides superior comfort and security for transporting injury victims extended distances. It has runners for easy carrying, four restraining straps, and an adjustable footrest. Stretcher is 80½″ Lg.×22½″ Wd.×8″ Ht. and made of steel with a mesh basket. Maximum weight capacity is 1,500 lbs.

		Each
Fold-Up Pole Stretcher	5522T8	$208.00

Basket Stretcher	5522T47	264.00

CamelBak Water Backpack

Stay hydrated while working outdoors or in other high-heat environments. These lightweight backpacks have an easy-to-fill insulated reservoir that keeps water cool for hours. A delivery tube connects to the reservoir and supplies water to you.

Cleaning brush set includes a large brush for cleaning the reservoir and a small brush for cleaning the delivery tube.

		Each
50-oz. Capacity	6229T1	$38.40
70-oz. Capacity	6229T3	54.00
Cleaning Brush Set	6229T4	11.00

Back-Support Belts

Belts

Nylon

Elastic Polyester with Shoulder Straps

Belts with Lumbar Support

Polyester

Leather

Nylon w/ Shoulder Straps

Give your back the extra support it needs for lifting and other strenuous activities. Belts with *elastic* contain spandex, a breathable, lightweight material that stretches to conform to your shape. Belts *with shoulder straps* have reinforcements around the waist to retain the belt's shape and maintain comfort.

Warning: Not for fall protection.

To Order: Please specify size based on waist measurement (see chart). Also specify color where necessary.

Belts— 25025T27 has spandex tensioners. 53475T11 has polypropylene reinforcements.

Belts with Lumbar Support— All have a protective pad for lower-back support except 52355T65, which has steel reinforcements. 11155T1 has elastic tensioners. *Leather* belts are cushioned with a soft suede lining.

Wrist Supports

Open, Wrap-On

Thumb Strap, Slip-On

Molded

Limit wrist movement and maintain a safe, neutral position. All supports are ambidextrous.

Flexible supports are made of an elastic rayon/cotton blend fabric for a snug fit. Color is beige. *Thumb-strap* style positions and secures the wrist and hand. ***Wrap-on*** has a hook-and-loop closure.

To Order: Measure around the smallest part of your wrist and specify size (except for 52585T14): S (5½″-6½″), M (6¾″-7½″), L (7¾″-8½″).

Molded supports cradle your wrist to prevent and alleviate the symptoms of carpal tunnel syndrome. They're 5″ long foam with an aluminum core for rigidity. They have a 2″ wide elastic strap with hook-and-loop closure. One size fits all.

		Each 1-9	Each 10-Up

Elbow Supports

Prevent "tennis elbow" injuries caused by overflexing and straining forearm muscles. This adjustable black polyester support is 2″ wide and has a hook-and-loop closure. One size fits all.

52625T1 ..... **Each** 1-4 $5.92 5-Up $5.46

Ankle and Knee Supports

Ankle Support

Open Knee Support

Nylon-covered neoprene retains warmth and braces sore muscles to encourage healing.

Ankle supports are beige. Size is based on your shoe size.

Knee supports are black. For size, measure around your leg at the kneecap. *Open knee supports* limit pressure on the kneecap.

About Safety Glasses

The following applies to all of our safety glasses, unless noted:

- Meet ANSI Z87.1-2003 high-impact standards (also known as Z87+)
- Provide 99% or greater UV protection
- Lenses are polycarbonate

Wraparound Safety Glasses

Indoor/outdoor lens is clear with a slight mirror coating for varying light conditions.

Standard Lenses

- Scratch-resistant lenses
- Adjustable arm length
- 5½″ temple-to-temple width
- Polycarbonate/ABS frame; nylon arms

Wraparound Safety Glasses with Interchangeable Lenses

- Scratch-resistant lenses
- Adjustable arm length
- 5¼″ temple-to-temple width
- Nylon arms
  Standard—Polyurethane frame
  Sport—Nylon frame

Simply switch out lenses to change the look of your glasses. All lenses are interchangeable and replaceable between styles. They also have an adjustable tilt to accommodate a larger range of face sizes.

Comfort-Fit Wraparound Safety Glasses

- Scratch-resistant lenses
- Adjustable arm length
- Temple-to-temple width:
  5⅛″ for standard lenses;
  5¼″ for extra-large lenses
- Polycarbonate frame; nylon arms

Cushioned temples, soft molded brow, and nonslip nose bridge make these glasses the ultimate in comfort. They have a ventilation channel between the frame and lens to increase airflow and reduce moisture buildup. Lenses have an adjustable tilt to accommodate a larger range of face sizes.

Indoor/outdoor lenses are clear with a slight mirror coating for varying light conditions.

Safety Eyewear Dispensers

Keep your safety glasses and goggles accessible as well as organized with these clear acrylic dispensers. They have 3/16″ dia. holes for wall mounting (fasteners not included).

Stack style has a hinged dispensing door.

Tray

Stack

	Overall Size, Ht.×Wd.×Dp.		Each
Tray	3″ ×9″×6″	10845T18	$38.67
Stack	17 1/4″×8″×4″	10845T23	80.62

Lens Cleaning Stations and Wipes

Silicone solutions provide better antifog properties.

Silicone-free solutions are for use in applications where silicone could cause contamination (in auto and paint facilities, for example, where silicone would make it difficult for adhesives and paints to stick to metal).

Disposable Stations

Keep eyewear smudge-free with these economical tissue stations. All include a pump bottle of antifog/antistatic solution and tissues. Stations are designed for wall mounting and don't include fasteners.

Cardboard stations have 5/8″ dia. keyholes.

Plastic stations have 1/2″ dia. keyholes and include tape with adhesive on both sides.

Face Shields

Face Shield

Face Shield with Chin Guard

For full-face protection that adjusts for a comfortable fit, choose one of these face shields. They meet ANSI Z87.1-2003 high-impact (also known as Z87+) standards when worn with safety glasses or goggles.

Pinlock adjustment consists of interlocking straps.

Ratchet adjustment has an easy-turn knob.

Polycarbonate window offers greater impact resistance than acetate window. *Green window* reduces glare.

Face Shields with Protective Coating

Face Shield

Face Shield w/ Chin Guard

The window on these face shields is coated for an added level of protection. All shields have an 8″ Ht. × 14″ Wd. × 0.08″ Thick. polycarbonate window that's oil and grease resistant. They have ratchet adjustment to fit head sizes 6½ to 8—simply turn the knob to adjust. Meet ANSI Z87.1-2003 high-impact (also known as Z87+) standards when worn with safety glasses or goggles.

Scratch-resistant coatings extend window life.

Chemical-resistant coatings resist mild acids and most chemicals and solvents; wet paint wipes off easily.

Heat-reflective coatings reflect radiant heat to keep your face cooler.

Face Shields for Hard Hats

Acetate and Polycarbonate

Steel Wire Mesh

A bracket allows you to attach these face shields to the brim of cap-style hard hats (not included; see page 1820) to provide full-face protection. Meet ANSI Z87.1-2003 when worn with safety glasses or goggles (acetate and steel wire meet basic-impact standards; polycarbonate meet high-impact, also known as Z87+, standards).

Polycarbonate and *acetate windows* are 0.04″ thick. *Steel wire mesh window* is the choice for high-heat jobs that require increased ventilation.

Nylon bracket is nonconductive. ***Gasketed nylon bracket*** provides a seal between the window and your hard hat. ***Gold-anodized aluminum bracket*** provides heat and corrosion resistance.

Face Shield for Electric Arc Protection

When exposed to low-level electrical hazards and a full hood is not necessary, this face shield provides up to 12 calories/cm^2 of arc flash protection. It has an 8" Ht. × 14" Wd. × 0.1" Thick. green-tinted polycarbonate window with a scratch-resistant, fog-free coating. Shield has ratchet adjustment to fit head sizes 6½ to 8—simply turn the knob to adjust. A chin guard and side shield extenders offer added protection. Meets NFPA 70E, ASTM F-2178, and ANSI Z87.1-2003 high-impact (also known as Z87+) standards when worn with safety glasses or goggles.

		Each 1-2	Each 3-Up
Face Shield	3942T47	$53.75	$47.43
Replacement Window	3942T56	31.25	27.57

Combination Face Shield/Hard Hat/Earmuffs

Get all-in-one face, ear, and head protection. Face shield has an 8″ Ht.×15½″ Wd.×0.040″ Thick. clear polycarbonate window that meets ANSI Z87.1-1989. Hard hat is slotted cap-style and made of orange ABS plastic. It has a ratchet-adjustment suspension to fit head sizes 6 to 9 and meets ANSI Z89.1-1997, Class E. Earmuffs have a noise reduction rating (NRR) of 22 dB and meet ANSI S3.19-1974. Face shield and earmuffs can be lifted when not in use.

Optional steel wire mesh window is 6¾″ Ht.×12″ Wd. and meets ANSI Z87.1-1989.

Air-Circulating Face Shield

A built-in, low-noise fan creates a constant flow of filtered air across your face for protection from harmful dust particles. Meets ANSI Z87.1-2003 basic-impact standards when worn with safety glasses or goggles. Face shield has a 7⅝″ Ht.×15½″ Wd.×0.06″ Thick. clear polycarbonate window and ratchet adjustment to fit head sizes 6⅜ to 7¾—simply turn the knob to adjust. It includes a clear window cover that extends window life; filter; prefilter; rechargeable four-hour NiMH battery; 120 VAC, 60 Hz charger; and a carrying case.

About Selecting Welding Shades

The guidelines below are for common welding applications and are based on American National Standards Institute/Accredited Standards Committee (ANSI/ASC) Z49.1-2005.

Arc Current, amps	Minimum Shade No.	Suggested Shade No.
Shielded Metal Arc Welding		
60 to 160	8	10
160 to 250	10	12
Gas Metal Arc Welding (MIG)		
60 to 160	10	11
160 to 250	10	12
Gas Tungsten Arc Welding (TIG)		
Less than 150	8	12
150 to 500	10	14
Torch Brazing		
—	—	3 to 4

Arc Current, amps	Minimum Shade No.	Suggested Shade No.
Air Carbon Arc Cutting		
Less than 500	10	12
Plasma Arc Welding		
Less than 20	6	6 to 8
20-100	8	10
100-400	10	12
Plasma Arc Cutting		
Less than 300	8	9
300 to 400	9	12

Plate Thickness	Minimum Shade No.	Suggested Shade No.
Gas Welding		
Less than ⅛″	—	4 to 5
⅛″ to ½″	—	5 to 6
Greater than ½″	—	6 to 8
Oxygen Cutting		
Less than 1″	—	3 to 4
1″ to 6″	—	4 to 5
Greater than 6″	—	5 to 6

Welding Glasses

Protect your eyes during welding jobs. These glasses have green polycarbonate lenses and a brow guard for added protection. Meet ANSI Z87.1-2003 high-impact (also known as Z87+) standards.

Comfort-fit wraparound glasses have a flexible rubber nosepiece and padded brow guard. Frame is black polycarbonate. Arm length and angle are adjustable.

Panoramic glasses have a black nylon frame. Arm length and angle are adjustable. *Fit-over* can be worn with prescription glasses.

Magnifying glasses add the convenience of bifocals. They have a black nylon frame and rubber nosepad for comfort. For information about magnification, see page 2304.

Shade No.	Temple-to-Temple Wd.	Glasses	Glasses Each	Repl. Lenses	Repl. Lenses Each

For information about selecting welding shades, see page 1817.

Welding Helmets

Nylon with Fixed Lens

Nylon Slimline with Lift-Up Lens

Nylon with Hard-Hat Band

Fiberglass with Fixed Lens

Leather with Lift-Up Lens

Helmets include a polycarbonate filter lens with a clear cover for protection from scratches and molten splashes (except nylon with hard-hat band, which is not scratch-resistant). All have ratchet adjustment with an easy-turn knob except nylon with hard-hat band, which has pinlock adjustment.

To Order: Please specify lens shade number where necessary.

Nylon*—** Lighter weight than fiberglass, these helmets fit head sizes 6½ to 8. ***Slimline style have a narrower width for confined spaces and an extended forehead area for increased overhead protection.

Nylon with hard-hat band helmets are lightweight and can be quickly snapped on and off your slotted hard hat.

Fiberglass helmets provide superior heat resistance and fit head sizes 6¾ to 8.

Leather helmets are flexible, so they're easier to maneuver in tight spots. They fit head sizes 6½ to 8.

	Lens Type	Lens Size, Ht. × Wd.	Available Shade Nos.	Color	Helmet Wd.		Each
Nylon	Fixed	2″ × 4¼″	9, 10, 11, 12	Black	9″	9653T31	$42.19

Auto-Darkening Welding Helmets

It takes just a fraction of a second for the filter lens on these helmets to automatically change from light (Shade No. 3) to dark (see shade Nos. in table below) when sparks are present. Lens changes back when sparks are gone. Helmets have a multishade filter lens that allows you to change shade number without changing lenses. Simply press a button to select. They also have inner and outer lens covers that protect the filter lens. All are made of nylon and have a ratchet adjustment to fit head sizes 6½ to 7¾—simply turn the knob to adjust. Color is black with a silver front panel. Operate on two 3-volt lithium batteries (included).

Lift-up-front helmet has the added benefit of a spring-mounted front panel. Flip it up to expose a 4¾″×3 9/16″ clear viewing lens for face protection during welding preparation work, precision grinding and cleaning, and inspection.

For All Helmets

Replacement Ratchet Adjustment	51885T97	Each	$24.05

For information about selecting welding shades, see page 1817.

Welding Goggles

Protect your eyes from harmful infrared and ultraviolet light. These goggles have a polycarbonate lens and an elastic headband. Meet ANSI Z87.1-2003 high-impact (also known as Z87+) standards.

Styles B&C can be worn with prescription glasses. *Style B* has a wide field of view for improved visibility. *Style C* have a flip-up filter lens. Simply lift to expose a clear lens for protection during inspection.

	Shade No.	Lens Size		Each
A	4	2″ Dia.	5444T5	$8.10
A	5	2″ Dia.	5444T2	8.10

C	6	2″ Ht. × 4¼″ Wd.	5469T5	13.90

Repl. Elastic Headband (12/Pkg.) ..... 5465T1 **Per Pkg.** $13.33

Filter Lenses and Covers

Gold-coated polycarbonate filter lenses reflect radiant heat.

Auto-darkening filter lenses take only a fraction of a second to change from light (shade number 3) to dark (see shade numbers in table below) when sparks are present. Lenses change back when sparks are gone. Operate on solar power, so there are no batteries to change. Meet ANSI Z87.1-2003 basic-impact standards. *Single-shade* lenses have an ABS plastic housing. *Multishade* lens allows you to change shade number without changing lenses. Simply flip a switch to select. Housing is nylon.

Lens Covers— Protect filter lenses from scratches and molten splashes with these clear covers. A *gasket* is required for a proper seal between a 2″ Ht. × 4¼″ Wd. filter lens and a lens cover on helmets with lift-up lenses.

Magnifiers— Fit behind your filter lens to bring your work into focus. Made of clear polycarbonate. *Universal fit* work with most 2″ Ht. × 4¼″ Wd., 4½″ Ht. × 5¼″ Wd., and 5¼″ Ht. × 4½″ Wd. lenses. For information about magnification, see page 2304.

Welding Face Shields

For full-face protection while welding, select one of these shields. All except hand-held shield have ratchet adjustment to fit head sizes 6½ to 8 and meet ANSI Z87.1-2003 high-impact (also known as Z87+) standards when used with safety glasses or goggles.

Lift-up-front face shield has a welding shade that flips up to expose a 8″ Ht. × 12″ Wd. × 0.09″ Thick. clear polycarbonate window for cutting and brazing jobs.

Hand-held face shield allows quick inspection of welding activity—simply hold it up to your face. It's lightweight thermoplastic with a handle and includes a clear lens cover. Meets ANSI Z87.1-2003 basic-impact standards when used with safety glasses or goggles.

About Hard Hats

To provide head protection, hard hats have multipoint suspension systems that distribute the force of impact. This distribution increases with the number of suspension points.

Pinlock adjustment suspension consists of an interlocking strip with holes and a strip with pins.

Ratchet adjustment suspension has an easy-turn knob.

The hard hats below meet impact and penetration resistance requirements of ANSI Z89.1-2003 (unless noted).

Impact and Electrical Insulation Classifications:

Type 1 reduce the force of impact caused by a blow to the top of the head only.
Type 2 reduce the force of impact from an off-center or top-of-head blow.
Class C are not tested for electrical protection.
Class E are proof-tested at 20,000 volts.

Suspension Styles

With Slots and Rain Trough

Heat-Resistant Thermoplastic

Reversible Suspension

Full-Brim Style

Adjust to fit head sizes 6½ to 8 except large size, which fit sizes 7 to 8½ and 7223T4, which fits sizes 6¾ to 8.

To Order: Please specify hard hat color: blue, green, high-visibility orange, orange, red, white, or yellow (unless noted).

Cap Style— Short tapered sides and back with an extended bill.

Hats *with slots* accommodate welding helmets (see 4116T on page 1818) and earmuffs (see page 1823).

Imprinted hats are white with one of the following logos on the front: U.S. flag (red, white, and blue); Visitor (red); or Safety First (green). **To Order:** Please specify logo.

Ventilated hats have slits on the top for increased air circulation.

Hats *with rain trough* have a rear brim gutter that channels water away from your neck.

Heat-resistant thermoplastic hats are made from a material similar to that used in firefighters' helmets, providing maximum heat protection.

Hat *with reversible suspension* lets you wear your hard hat backward without removing and reinstalling—just swing the suspension to the opposite side.

Full-Brim Style— A wide front-to-back brim provides added protection against sun, glare, splash, and rain.

Hard Hat With Retractable Visor

The fully retractable visor on these hard hats fits easily over prescription glasses. Visor is 4¼″ Ht. × 10¾″ Wd. × 0.04″ Thick. and made of clear polycarbonate. Hard hats are ABS plastic with an extended nape for increased neck protection. They have ratchet suspension with sweat band and fit head sizes 6¾ to 7⅞.

Color	Suspension Points	Type		Each
Blue	6	1	1984T17	$43.20

Replacement Suspension			1984T31	19.88

Bump Caps

Just as their name implies, these caps protect your head from minor bumps and scrapes. They have a pinlock-adjustment suspension that consists of an interlocking strip with holes and a strip with pins.

Note: Caps and face shield do not meet ANSI standards.

Traditional

All are polyethylene.

Cap fits head sizes 6½-7¾.

Cap with face shield attachment lets you add a shield (sold separately) to protect your face from spray and dust. It fits head sizes 6½ to 8¼.

Face shield is 6″ Ht.×15½″ Wd.× 0.040″ Thick. clear PETG.

Sweatbands

Cellulose bands have an additional absorbent layer for longer wear. Simply throw away after use.

Cotton terry bands absorb perspiration while providing maximum comfort. They're washable for reuse.

Elastic Headbands— Because they're not attached to your hat, you can position these bands where you want them.

Attachable Headbands— Fasten securely to the suspension of your hard hat or welding helmet.

Band and bandanas ***with cooling crystals*** keep you cool all day—just soak in cold water for 20 minutes.

Hearing Protection Earmuffs

Slip on these earmuffs for quick, comfortable hearing protection. All have an adjustable headband, plastic ear cups, and foam ear cushions. Earmuffs should be worn in the position or positions that have an Noise Reduction Rating (NRR) listed in the table at right. For information about hearing protection, see page 1823.

Push-to-hear earmuffs allow you to safely hear conversation and announcements without removing them. Simply push the button to hear speech and other sounds for 30 seconds. Operate on one AA battery (not included).

About Hearing Protection

Earmuffs, earplugs, and ear caps are rated by the Noise Reduction Rating (NRR) guidelines, which are enforced by OSHA. The NRR of a hearing protector indicates its noise reduction capabilities measured in decibels (dB). The higher the NRR, the greater the noise reduction capability. The protectors on this and the previous page are tested in accordance with ANSI S3.19-1974.

For sound level meters, see page 1828.
For more information about decibel levels, see page 1840.

Caution: Prolonged exposure at or above 85 dB requires the use of hearing protection. The actual amount of protection depends on proper size and fit, the position in which the protector is worn, as well as your specific work environment.

Choosing a Hearing Protector

OSHA recommends that you choose a hearing protector with an NRR value that is two times the difference between your existing and desired noise level.

For example, if your noise level is 93 dB and you want your exposure to be no higher than 80 dB, the difference is 13 dB. You should choose a protector with an NRR of 26 dB or higher.

Earmuffs for Hard Hats with Slots

Designed to fit on a cap-style hard hat with slots, these earmuffs take just seconds to attach. They have plastic ear cups, spring-wire arms, and liquid-foam ear cushions for a tight seal. Hard hat sold separately.

Polyethylene hard hat with slots has a six-point ratchet suspension. **To Order:** Please specify hard hat color: blue, green, high-visibility orange, orange, red, white, or yellow. For more hard hats, see page 1820.

Earplugs

Our soft, pliable earplugs provide quick, convenient, and comfortable hearing protection. Choose from separate (unattached) pairs and corded (connected with a plastic cord, unless noted) pairs that can be worn around your neck when not in use. Pairs are individually packaged.

Disposable Earplugs— All are made of foam.

Roll-up plugs roll for insertion into your ear and then expand to conform to the shape of your ear canal. *Antimicrobial barrel* plugs protect against the growth of bacteria and mold. *Grip-ring* plugs have rings that keep plugs from backing out of your ear.

No-roll plugs slide right into your ear—no need to roll them up to use them. *Pod* plugs have a flexible plastic grip that makes them easy to insert and remove without touching the actual plug.

Reusable Earplugs— These washable plugs are made of soft plastic.

Metal-detectable plugs have an enclosed ball bearing that can be sensed by metal detectors. Good for food preparation and pharmaceutical processing areas.

Banded Ear Caps

Lightweight and economical, these reusable foam ear caps are a great alternative to earplugs. They form a seal over the entrance to your ear canal but don't rest inside so they're a good choice for frequent on/off use. All caps have a flexible plastic band and are worn in the position or positions that have an NRR rating listed (see below).

Pod and ***flared cone*** caps include one pair of replacement caps.

Earplug Dispensers

With Earplugs

Reusable Open Top

Reusable Closed Top

Keep ear plugs accessible to workers as well as visitors.

Dispenser with earplugs is sealed to keep plugs sanitary and is disposable when empty. It dispenses one separate pair at a time, cutting down on waste. Dispenser is recyclable plastic and includes mounting hardware. Plugs are foam roll-up barrel style with an NRR of 33 dB. Color is green. Meet ANSI S3.19-1974. For information about hearing protection, see page 1823.

Reusable dispensers are clear acrylic and have 3/16″ dia. mounting holes (fasteners not included). Fill with the plugs of your choice.

Disposable Respirator Masks

A

B

C

D

E

F

G

H

Folded

Breathe easily with these maintenance-free respirator masks, and simply throw them away after use.

Masks with a *mesh shell* hold their shape in heat and humidity. Masks with *exhale valve* reduce breathing resistance and hot air buildup.

Efficiency standards are certified by the National Institute for Occupational Safety and Health (NIOSH).

Style C mask has a large surface area and low breathing resistance, which creates a comfortable fit and extends the life of the mask.

Styles F and ***G*** have a comfort strap. When mask is not in use, just unbuckle the strap and let the mask hang loosely around your neck.

Disposable Nuisance Dust Mask

Slip on this mask for relief from dust irritation. Mask conforms to your face and has an adjustable metal nosepiece.

Warning: Designed for use against nuisance dust only. Mask is not NIOSH approved. Do not use for spray painting or for protection against silica, asbestos, or other harmful substances.

	Pkg. Qty.	Per Pkg. 1-11	Per Pkg. 12-Up
55815T61	50	$7.66	$6.96

Disposable-Mask Dispenser

Keep masks clean and ready to use in this clear acrylic dispenser. It stores approximately 30-40 masks, depending on size. Dispenser is 12½″ Ht. ×6″ Wd.×6″ Dp. and has 3/8″ dia. holes for wall mounting (fasteners not included).

11885T14 ..... **Each** $60.63

Low-Profile Respirator Mask

Designed to fit easily under welding helmets, this respirator has a large surface area, which minimizes breathing resistance. Separate intake and outflow channels keep exhaled air from saturating the filter, so air remains cool and dry. Fitted with an N99 filter, mask filters 99% of airborne particles; not oil resistant.

	NIOSH Approval		Each 1-9	Each 10-Up

Respirator Accessories

Wipes

Disposable Hood for Half Facepiece

Fit Test Kit

Wipes quickly clear perspiration from your respirator. You'll get 100 individually wrapped 70% isopropyl alcohol pads.

52735T21 ..... **Per Pkg.** $15.83

Cartridge respirator storage bags are reusable and keep your respirators clean when not in service.

Disposable hoods protect your head, face, and neck from dust, paint, and other chemicals. Hood for *half facepiece* has an 11″×3″ clear PVC window for eye protection. An elastic opening exposes the respirator cartridge and exhalation valve to eliminate fogging. Hood for *full facepiece* has an elasticized face opening that wraps around the respirator lens and underneath the cartridge, covering the user's head.

	For Facepiece Style		Each

Fit Test Kit	52805T41	$77.57
Replacement Banana Oil (50 tests)	52805T42	42.08

Supplied-Air Respirators

If you can access a breathable air source, you can use these cartridge-free respirators. Because you don't need to draw air through a filter or cartridge, resistance and fatigue are minimized. All respirators require 6-15 cfm of air. To maintain NIOSH approval, respirators must be used with the hoses listed. Maximum hose length allowed is 300 ft.

Respirators ***for air lines*** connect to in-plant breathable air lines. Air connection is a 1/4″ industrial shape quick-disconnect coupling (see page 298 for more information).

Respirators ***for air pumps*** connect to air pumps (sold separately on page 1827) and have a 1/2″ industrial shape quick-disconnect coupling.

Chemical-Resistant Hood Respirators

Hood is poly-coated Tychem QC with a sewn-in 16″×6″ acetate lens and has two layers: an outer bib for overspray protection and an inner bib that tucks into your clothing for extra splash protection. Furnished with a pinlock suspension that fits head sizes 6 1/2 to 8, a breathing tube, an air hose, and a nylon belt. Hood accommodates eye and ear protection. NIOSH approval is TC-19C-154 Type C.

Disposable clear lens cover has an adhesive back.

Heavy Duty Helmet Respirators with Nylon Cape

The high-density polyethylene helmet has an inner and outer 14″×5″ acetate lens. Attached to the helmet is a waist-length polyurethane-coated nylon cape and a tube assembly with a belt for securing breathing tube. Furnished with an inner helmet shell attached to a pinlock suspension that fits head sizes 6 1/2 to 8; disposable adhesive-backed clear outer lens cover; and air hose.

NIOSH approval is TC-19C-293 Type C and CE.

Helmet meets ANSI Z89.1-2003 Class C standards; inner lens meets ANSI Z87.1-1989 impact standards.

Vortex Cooling Tube for Air Line Respirators

Cool incoming air by as much as 30° F. Tube has a control valve for temperature adjustment and is for use with 9770T7 and 10615T11 only.

9770T75 ..... **Each** $208.55

Supplied-Air Respirator Pumps

With Open Dripproof Motor

With Totally Enclosed Motor

Connect one of these oil-free portable pumps to your full-hood, helmet, or half- and full-facepiece respirators for a continuous supply of low-pressure breathable air. Air connection is a ½″ industrial shape quick-disconnect coupling (see page 298 for more information).

Maximum supply pressure is 15 psi. Maximum hose length allowed is 300 ft. Motor operates on 115 VAC, 60 Hz and has an 8-ft. cord with three-prong plug.

Airflow @ 5 psi	Amps	Supplies No. of Respirators: Full Hood	Helmet	Half/Full-Facepiece		Each
With Open Dripproof Motor—3/4 hp

Replacement Inlet Filter					56825T81	20.89
Replacement Outlet Filter Cartridge					56825T82	25.27

Supplied-Air Respirator with Pump

Hood

Full Facepiece

Take fresh air with you. The portable pump on these respirators provides a continuous supply of clean air for one person. Respirators include a 50-ft. air line hose and 25 clear, adhesive-backed disposable lens covers. Pump has an open dripproof, ¾-hp motor that operates on 115 VAC, 60 Hz and has an 8-ft. cord with three-prong plug.

To maintain NIOSH approval, these respirators must be used with the hoses listed. Maximum hose length allowed is 300 ft.

Full-facepiece respirator is silicone with a 7″×10″ polycarbonate lens. NIOSH approval is TC-19C-322.

Hood respirator has a chemical resistant Tychem QC hood with a 6″×16″ acetate lens. Accommodates eye and ear protection. NIOSH approval is TC-19C-154.

Extension hose attaches to the pump's outlet to give the user a wider range of movement.

Portable Single-Gas Detectors

Detector

Don't be fooled by their size—these compact, portable units can detect hazardous gases in seconds. They have an LCD, an audible alarm with a rating of 95 dB, a high-intensity LED light that brightens when the alarm sounds, and a belt clip. Temperature range is –4° to +122° F. For use in Class 1, Division 1, Groups A, B, C, and D locations.

A calibration check must be performed on the detector before each use to verify that it is working properly. The calibration test for *carbon monoxide* and *hydrogen sulfide* detectors requires a regulator, tubing, and specific gas cylinder (sold separately).

Detectors are 3½″ Ht.×2″ Wd.×1″ Dp. and have a vibration alarm. They operate on one nonreplaceable lithium battery (included) and should be thrown away at the end of their two-year lifespan.

Detectors with replaceable battery are 3½″ Ht.×2″ Wd.×1″ Dp. and operate on one lithium battery (included).

Detects	Detectors: Measuring Range	Each	Detectors with Replaceable Battery: Measuring Range	Each	Gas Cylinder	Each
Oxygen	0-25% Vol.	18995T81 $251.61	0-25% Vol.	18995T92 $407.37	—	—
Carbon Monoxide	0-500 ppm	18995T83 251.61	0-1,500 ppm	18995T94 407.37	18995T923	$220.07
Hydrogen Sulfide	0-100 ppm	18995T85 251.61	0-200 ppm	18995T96 407.37	18995T924	207.00
Replacement Lithium Battery					7821K62	Each $11.00
Calibration Regulator for Carbon Monoxide and Hydrogen Sulfide Detectors					18995T916	Each $207.00
Calibration Tubing for Carbon Monoxide and Hydrogen Sulfide Detectors					18995T935	Each $8.89

Portable Multigas Detectors

Detect the presence of combustible gases (such as acetone, butane, hydrogen, methane, pentane, propane, and toluene), oxygen, carbon monoxide, and hydrogen sulfide. These detectors have an LCD and a rubberized housing. Three types of signals indicate the presence of gases: an audible alarm rated at 95 dB, a visual alarm (flashing light), and a vibration alarm. There is also a motion sensor that sounds an alarm if the user becomes disabled. Detectors are 4⅜″ Ht.×3″ Wd.×1⅜″ Dp. and operate on a rechargeable lithium ion battery (included). Temperature range is –4° to +122° F. ETL listed for Class 1, Div. 1, Groups A, B, C, and D and Class 2, Div. 1, Groups F and G hazardous locations. IP 67 rated.

Detector requires a calibration regulator and cylinder (sold separately).

Detector with sampling probe and tubing allows you to test the air in a hazardous area before entering. Great for confined spaces. Probe operates on two AA batteries (included). Tubing is 25 ft. long.

Calibration regulator and ***calibration cylinder*** maintain the accuracy of the detector. A calibration check must be performed on the detector before each use.

Detects	Measuring Range
Combustible Gases	0-100% LEL ♦
Oxygen	0-30% Vol.
Carbon Monoxide	0-1,999 ppm
Hydrogen Sulfide	0-200 ppm

♦ LEL = lower explosive limit.

		Each
Detector	18995T42	$799.07
Detector with Sampling Probe and Tubing	18995T43	1,323.21
Calibration Regulator	18995T35	303.43
Calibration Cylinder	18995T47	254.00
Repl. AA Battery for Probe (4/Pkg.)	71455K53	Per Pkg. $2.94

Wall-Mount Combustible Gas Detector

An audible alarm alerts you to the presence of combustible gases. Detects propane, methane, hydrogen, and carbon monoxide. Alarm sounds at 420 ppm for propane, 5,000 ppm for methane, 200 ppm for hydrogen, and 150 ppm for carbon monoxide. A built-in programmable timer can be set to sound the alarm as soon as gas is detected or after 4 or 8 minutes of continuous exposure. Reset button suspends the alarm and restarts the cycle for 5 to 8 minutes in case of false alarm. Detector includes a relay for connection to auxiliary sirens and alarm systems. It also has a 6-ft. cord with two-prong plug and a 120 VAC, 60 Hz adapter for a 12 VDC output. Mounting fasteners are not included.

Also Available: Single-gas detectors. Please ask for 6631T4 and specify propane, methane, carbon monoxide, or hydrogen.

Alarm, dB	Ht.×Wd.×Dp.	Temperature Range	Mount. Hole Dia.		Each
85 @ 6 ft.	6¾″×3¼″×1¾″	–20° to +120° F	3/16″	6631T18	$274.65

Hydrogen Gas Detector

Great for lead-acid battery-charging rooms, this detector senses hydrogen gas in the surrounding air. The two relays are normally open and rated for 10 amps @ 250 VAC.

When hydrogen concentration reaches 1% by volume, a yellow "caution" LED illuminates and the first relay closes to trigger a remote exhaust fan and/or alarm. When hydrogen reaches 2%, a red "danger" LED illuminates, an 80 dB @ 1 ft. alarm sounds, and the second relay closes to activate your remote alarm. Operates on 110/220 VAC, 50/60 Hz and has a terminal box for hardwiring. Detector is 7″ Ht. × 4¾″ Wd. × 2½″ Dp. and has 3/16″ dia. holes for wall mounting (fasteners not included). Temperature range is 14° to 104° F.

Optional remote with buzzer and *25-ft. cable for remote* enables you to monitor the detector from a distance. Remote has the same LED indicators as the detector plus a buzzer rated 80 dB @ 4 feet. Has two 3/16″ dia. holes for wall mounting (fasteners not included).

		Each
Detector	71095K71	$590.91
Optional Remote with Buzzer	71095K24	153.85
25-ft. Cable for Optional Remote	5703T411	5.80

Static Charge Detector

Locate and accurately measure static charges. This unit detects field potentials up to 22 kV at 1″; higher voltages may be measured at distances greater than 1″. A hold button freezes the digital display for recording measurements.

Detector is 4⅞″ Ht. × 2⅞″ Wd. × 1″ Dp., operates on one 9-volt battery (included), and comes with a carrying case. Temperature range is 50° to 104° F.

		Each
Detector	6605T63	$592.31
Replacement 9-Volt Battery	71455K56	2.75

Stick-On Carbon Monoxide Indicator

Place this adhesive-backed indicator anywhere you want to monitor carbon monoxide levels. Indicator is a 0.6″ dia. yellow circle that darkens when carbon monoxide levels reach 50 ppm (the OSHA standard for maximum continued exposure). Replace the indicator with a refill every 30 days. Unopened indicator and indicator refill have a shelf life of 6 to 12 months. Overall size is 2⅜″ dia. Temperature range is 50° to 122° F.

		Each 1-5	Each 6-Up
Indicator	1085T61	$5.59	$4.82
Indicator Refill	1085T75	3.26	2.82

Indoor Air-Quality Monitor

Track indoor ventilation quality to prevent "sick building" syndrome. This monitor has an easy-to-read LCD that shows carbon dioxide (CO_2) levels in 10 seconds. It's accurate to ±50 ppm or ±5% of reading (up to 5,000 ppm), whichever is greater. Plus, it measures the temperature between 32° and 122° F (0° to 50° C). Monitor is 6¼″ Ht. × 3″ Wd. × 1½″ Dp. and operates on four AA batteries (not included). It also includes a 120 VAC, 60 Hz (0.05 amp) AC adapter with 6-ft. cord and two-prong plug. Monitor comes calibrated but must be recalibrated every 12 months.

Calibration kit includes instructions, tubing assembly, gas regulator with gauge, and carrying case.

	Measuring Range, ppm		Each
Carbon Dioxide Monitor	0-10,000	39035K69	$568.36
Calibration Kit		39035K83	248.98
AA Battery (4/Pkg.)		71455K53	Per Pkg. $2.94

Sound Level Meters and Monitor

40 to 130 dB Meter

35 to 130 dB Meter

All of these units have selectable A and C scales to adjust the frequency response. The A scale is similar to the response of the human ear and is used by OSHA. The C scale is suitable for measuring the sound level of machinery. Meters and monitor ***with NIST certificate*** include a certificate of calibration traceable to the National Institute of Standards and Technology (NIST).

Calibrator verifies and calibrates meter and monitor operation.

Meters have an easy-to-read LCD and include a microphone. *35 to 130 dB meters* meet ANSI S1.4-1983 and include a carrying case.

Monitors let you keep an eye on noise levels. The large LCD alerts you when levels exceed your programmed setpoint. Monitors have a time stamp and an attached microphone that rotates 180°. When operating the monitors with the included 120 VAC adapter, four LEDs indicate when the sound level either exceeds or falls below the setpoint. Wall mount using the ½″ dia. hole (fastener not included) or bench mount with the attached fold-away stand. Meet ANSI S1.4-1983.

Remote microphone cable allows you to use the microphone up to 15 ft. from the display.

Remote alarm relay allows you to wire a warning light (sold separately on pages 1870-1872) to illuminate when the sound level exceeds the setpoint. Relay has a 9-ft. cable and is rated for 10 amps @ 280 VAC.

Protective Pads

Silica Pad

Silica Pad with Magnetic Strip

Take these pads to your spot-welding jobs to protect walls, glass, and fabric from heat and flame. Maximum temperature is 1800° F.

Silica cloth pad has two grommets for tacking pad to a wall.

Attach ***pads with magnetic strip*** to protect metal surfaces.

Material	Ht. × Wd.	Thick., mils	oz./sq. yd.	Color	Pads	Each	Pads with Magnetic Strip	Each
Silica Cloth	10″ × 8″	54	36	Beige	2962K34	$11.25	2962K36	$18.89

52365T75 ..... **Per Sq. Ft.** $3.10

Protective Curtains

Moisture-resistant cotton duck curtains are flame, water, and mildew resistant. They're 30 mils thick, 15 oz./sq. yd. Max. temperature is 200° F. Curtains have grommets on 12″ centers along all sides. Color is olive green. Meet Canvas Products Association International CPAI-84.

Oil-resistant polyester curtains are vinyl coated to hold up against oils and alkalies. They're 14 mils thick, 13 oz./sq. yd. Maximum temperature is 150° F. Curtains are washable and have grommets on 12″ centers across the top and 24″ centers along either side. California Fire Marshal approved. ***To Order:*** Please specify color: black, blue, tan, white, or yellow.

Note: The finished size of all curtains will be slightly smaller due to hemming.

See-Through Protective Strip Curtains

You can see and walk through these bronze-colored curtains. They consist of 8″ wide vinyl strips that overlap 50% to filter UV light and protect against welding sparks and splatter. All are 80 mils thick. Maximum temperature is 150° F. California Fire Marshal approved. For clear vinyl strip doors (not for welding), see page 2892.

Ceiling, Wall, and Suspension Mount— Three installation options in one. Suspension mounting requires ½″ threaded rod (not included; see pages 3164-3167. Curtain is 72 oz./sq. yd.

Pipe Hanger Mount— Use the included two-piece hanger clamp with 2″ maximum dia. pipe (not included). Curtain is 60 oz./sq. yd.

Also Available: Custom sizes. Please ask for 55705T999 and specify height, width, and mounting style.

Custom Sizes— **To Order:** Please specify width and length.

3925T47 ..... **Per Sq. Ft.** $3.53

Protective Curtains and Blankets

Used as a curtain

Used as a blanket

Hang as a curtain or drape over equipment for protection from welding sparks and other hazards.

Note: Finished size will be slightly smaller due to hemming.

Fiberglass

The economical choice for abrasion resistance. Maximum temperature is 1000° F. Material has grommets on 12″ centers along all sides.

18 oz./sq. yd.— 35 mils thick. Color is tan.

35 oz./sq. yd.— 80 mils thick for extra protection from welding splash. Also useful for heat-treating applications such as wrapping hot metal parts to slow the cooling process. Color is white.

Ht. × Wd.	18 oz./sq. yd.	Each	35 oz./sq. yd.	Each

6213T41 ..... **Per Sq. Ft.** $5.56

Heat-Reflective Aluminized Fiberglass

Reversible for versatile protection. The aluminum foil side reflects heat, shields against molten splatter, and has a maximum temperature of 300° F. The tan-colored fiberglass side resists abrasion and has a maximum temperature of 1000° F. Material is 30 mils thick, 20 oz./sq. yd., and has grommets on 12″ centers along all sides. Meets MIL-C-20079H Type 1 Class 10 and MIL-1-24244.

5500T271 ..... **Per Sq. Ft.** $4.64

Magnetic-Edge Acrylic-Coated Fiberglass

Sewn-in ceramic magnets let you position this material to protect angled and vertical surfaces. The weather-resistant acrylic coating repels spatter. Material is 40 mils thick, 24 oz./sq. yd., and has a maximum temperature of 600° F. It also has a grommet located next to each magnet. Color is gold. Magnets are 1 7/16″ Dia. × 5/16″ Thick. and have a maximum temperature of 300° F.

3 ft. × 3 ft. has a magnet at each corner.

6 ft. × 6 ft. and larger have magnets at 36″ centers along all sides.

6 ft. × 8 ft.	5678T13	192.80			

Curtain Hooks (10/Pkg.) ..... 54895T44 **Per Pkg.** $8.32

Modular Protective Screens

Use these screens individually or connect them to create the configuration you need. They have platform legs that can accommodate casters for mobility. Use one set of four casters (sold separately) per screen.

Screens *with slip-on curtains* offer easy assembly and have a 1″ OD tubular steel frame. All include two clips for connecting screens.

Screens *with tie-on curtains* have a ¾″ square tubular steel frame that reduces the slipping and twisting that can occur with round frames. Attach multiple screens using frame connectors (sold separately); one set of two required per connection.

Fire-Retardant Cotton Duck— Color is olive green. Meets Canvas Products Association International CPAI-84. *Slip-on curtain* material is 30 mils thick, 16 oz./sq. yd. Max. temperature is 120° F. *Tie-on curtain* material is 24 mils thick, 12 oz./sq. yd. Max. temperature is 300° F.

See-Through Vinyl— Curtain material is 14 mils thick, 13 oz./sq. yd. Max. temperature is 150° F. California Fire Marshal approved. **To Order:** Please specify color. For slip-on curtains, specify gray or yellow. For tie-on curtains, specify gray, green, orange, or yellow.

Mildew-Resistant Polyester— Resists tears, flame, and most chemicals. Curtain material is 14 mils thick, 14 oz./sq. yd., and has a blue vinyl coating. Max. temperature is 150° F. California Fire Marshal approved.

Abrasion-Resistant Fiberglass— Curtain material is 51 mils thick, 28 oz./sq. yd., and has a black acrylic coating. Max. temp. is 1000° F.

See-Through Vinyl (Two Screens)

Multi-Panel Protective Screens

Shield workers and equipment from welding and grinding hazards—simply tie the fire-retardant cotton duck curtains to the frame. These screens have hinged panels for free-standing protection, or add platform legs (sold separately) to position in a straight line. Platform legs include fasteners and can accommodate casters (sold separately). Use one set of two casters per platform leg. Frame is 1″ OD tubular steel. Curtain material is 24 mils thick, 12 oz./sq. yd. Maximum temperature is 200° F. Color is olive green. Meets Canvas Products Association International CPAI-84.

Roll-Up Protective Screens

Lightweight and flexible enough to roll up and carry under your arm, these free-standing screens provide spark and flash protection in welding, cutting, and brazing areas. Screens have two layers of fabric reinforced with 14-ga. galvanized wire mesh. They're mildew resistant and have a built-in handle and tie strap.

Fire-retardant cotton duck is 30 mils thick, 16 oz./sq. yd. Maximum temperature is 120° F. Color is olive green. Meets Canvas Products Association International CPAI-84.

Oil-resistant polyester has a vinyl coating that resists oils, alkalies, and most acids. Material is 15 mils thick, 11 oz./sq. yd. Maximum temperature is 160° F. Color is yellow-and-black striped on the outside, solid yellow on the inside. California Fire Marshal approved.

Fire-Retardant Cotton Duck

Oil-Resistant Polyester

Heavy Duty See-Through Protective Screens

Single Panel with Platform Legs

Three Panel with Platform Legs

Three Panel with Casters

Designed for demanding environments, these screens have a single vinyl curtain for gap-free coverage that also allows visibility through the material. The frame is made of 1″ square tubular steel that reduces the slipping and twisting that can occur with round frames. Curtain material is 14 mils thick, 14 oz./sq. yd. Maximum temperature is 120° F. California Fire Marshal approved.

Single-panel and ***three-panel screens with platform legs*** have a tie-on curtain. Attach casters (sold separately) to legs for mobility. **To Order:** Please specify curtain color: clear (not for welding), gold, green, or orange.

Three-panel screens with casters roll wherever you need them. Curtain has hemmed pockets that slip over the frame and a 7″ wide blue reinforced-nylon border to prevent tears. Position the panels and turn the wing nut to lock in place. Screens have four casters, two per leg.

Protective Partitions

Free-Standing

Build customized, space-efficient partitions for welding or other jobs almost anywhere indoors. A 30″ high gray-tinted window spans the entire partition for visibility. Curtains are gray vinyl that resists tears, fire, oil, mildew, and most acids. Material is 14 mils thick, 13 oz./sq. yd. Simply slide curtains to open and close. All have hook-and-loop fasteners along the vertical edge for joining sections. Maximum temperature is 150° F. California Fire Marshal approved.

Also Available: Free-standing partitions in other sizes and curtain materials and suspended partitions in other materials. Please ask for 5592T999 and specify partition style, size, and material.

Free-Standing Partitions

Everything you need for a four-sided partition, including 7-ft. high curtains, a 16-ga. galvanized steel track, four columns, and four 1 ft. × 1 ft. bases.

Enclosed Area		Each
6 ft. × 8 ft.	5592T31	$848.53
8 ft. × 8 ft.	5592T64	888.25
10 ft. × 10 ft.	5592T33	1,032.10

Suspended Partitions

Suspended

Combine straight and curved sections to build one- to four-sided partitions. Each section includes the curtain, its corresponding 16-ga. galvanized steel track, two-wheel nylon rollers, 1″ swivel hooks for hanging curtains, and assembly hardware. Curtains have grommets along the top and a weighted bottom hem. Install partition by hanging the track from overhead supports using chain or 3/8″ threaded rod (not included; see pages 3164-3167 for threaded rod). Each straight section is hung from two points (if curve is used independently, it is supported from three points). To design your own partition, determine height, overall length, and number of straight and curved sections needed.

Note: Curved sections add 2 ft. to the overall length and width.

Section	8 ft. High	Each	10 ft. High	Each	12 ft. High	Each
6 ft. Straight	5592T41	$132.50	5592T45	$146.50	5592T53	$160.50

Umbrellas

Vehicle Mount *In-Ground*

For on-the-job shelter from sun and rain, pop open one of these umbrellas. Canopy is yellow. Ribs are steel unless otherwise stated.

Vehicle-Mount— The universal mounting bracket fits most equipment (fasteners included). Pole has a tilt hinge.

In-Ground— Has a pointed pole that's easy to push into the ground. Umbrellas with an aluminum pole have a tilt hinge. *Optional steel stand* lets you use in-ground umbrellas 5736T6, T5, and T9 on hard surfaces.

Nonconductive umbrella has fiberglass ribs.

Welding umbrella has a 20 mil thick, 10 oz./sq. yd., canopy with a max. temp. of 140° F. Meets Canvas Products Association International CPAI-84.

About Mirror Materials

***Acrylic*—**Lightweight and shatter resistant.
***Scratch-Resistant Acrylic*—**A clear, hard coating keeps mirror looking like new.
***Glass*—**Economical and the easiest to clean.
***Shatter-Resistant Glass*—**Laminated to keep mirror in the frame if glass breaks.
***Tempered Glass*—**Shatter resistant and heavier than glass.
***Polycarbonate*—**Offers the highest impact resistance.
Zinc Alloy and ***Steel*—**Unbreakable. Use where vandalism is a concern. ***Chrome plating*** adds corrosion resistance.
***Stainless Steel*—**Provides maximum corrosion resistance and strength.

Safety Mirrors

Promote driving safety with these indoor/outdoor mirrors.
Styles A, B, and ***C*** have holes for mounting to a dashboard (fasteners not included). ***Styles A*** and ***C*** have 1/4″ dia. holes; ***Style B*** has 3/16″ dia. holes.
Style D includes mounting fasteners.
Style E mounts through a drilled hole and is secured with the included fasteners.
Style F mount using the 1/4″ dia. holes (fasteners not included).
Style G include fasteners except 9208T46 has an adhesive back for surface mounting.
Style H has an adhesive back for surface mounting.
Style J is also known as a West Coast mirror. It has nickel- and chrome-plated steel arms and includes mounting fasteners.
Style K have a 3/8″ swivel mounting stud for use with the mounting

	Mirror	Backing		Each
Convex				
A 3 1/4″ × 7″ with Adjustable Viewing Angle	Chrome-Plated Zinc Alloy	Chrome-Plated Zinc Alloy	9186T22	$25.93
B 2 1/2″ × 7″ with Adjustable Viewing Angle	Chrome-Plated Steel	Chrome-Plated Steel	9186T12	47.11
C 4″ × 11 3/4″ with Adjustable Viewing Angle	Glass	Black Plastic	9186T35	33.40
D 8″ Dia. with 14″ Arm	Glass	Chrome-Plated Steel	9208T42	78.22

Replacement Mirror for Style J			6074T5	15.78

Mirror Mounting Brackets

Attach your mirror to one of these brackets for mounting versatility indoors and out. Brackets are black powder-coated steel, except Style P has a nickel-chrome finish.
Style L clamps onto 3/4″ dia. rod or tubing.

		Bracket Hole Dia.	Fits Mirror Stud Size		Each
L	Clamp Mount	—	3/8″	6051T21	$4.38
M	Offset Mount	5/16″	3/8″	6051T22	8.38
N	Telescoping Arm, 9″ to 15″	5/16″	5/16″	6051T23	14.50
P	Telescoping Arm, 14″ to 20″	5/16″	5/16″	6051T27	11.95
Q	Tripod Mount, 22″ to 28″	5/16″	3/8″	6051T24	26.56

Portable Convex Safety Mirrors

Position these convex mirrors wherever you need improved safety and surveillance. All are for indoor use, except Style U is indoor/outdoor. *Styles R* and *T* have a flexible gooseneck. *Style R* clip has a maximum opening of 2 3/4″.
10825T14 adjusts from 35″ to 57″ high. 10825T22 adjusts from 39″ to 61″ high.

For information about mirror materials, see page 1833.

Convex Safety Mirrors

Swivel Mounting Bracket

Prevent accidents and increase security in your facility. These convex mirrors provide a large field of vision for seeing around corners, down aisles, and over counters. All have a swivel mounting bracket for easy adjustment.

Indoor— Hardboard back, unless noted.

Drop-In Dome Safety Ceiling Mirror

Simply replace a tile in your drop ceiling with one of these 360° acrylic mirrors.

For Opening Size	Dia.		Each
2 ft.×2 ft.	22″	6057T41	$69.03
2 ft.×4 ft.	22″	6057T51	109.48

For information about mirror materials, see page 1833.

Dome Safety Mirrors

Mount these dome-shaped mirrors for an unobstructed overhead view of blind intersections and corners. All come with mounting hardware except steel mirrors, which have 1/8″ holes, and scratch-resistant acrylic mirrors, which include D-ring clips. Mirrors *with galvanized steel back* have sealed edges to keep out moisture and debris.

360° full dome mirrors mount on the ceiling.
180° half dome mirrors mount where the ceiling and wall meet.
90° quarter dome mirrors are perfect for corners.

True-View Flat Safety Mirrors

For a more accurate reflection of what's going on in your facility, these flat mirrors provide the depth perception that convex mirrors can't. All have a hardboard back, unless noted. The swivel mounting bracket makes adjustment easy but does not allow flush mounting. For flush-mount styles, see lavatory mirrors on page 2006.

Fire Extinguishers

For fire extinguisher inspection tags, see pages 1880-1881.

About Choosing a Fire Extinguisher

Underwriters Laboratories (UL) classifies fires according to the material that's burning. Extinguishers are rated by which types of fire they can put out. For Class A and B fires, they're also given a number—the higher the number, the greater the fire-fighting capability. Please check local ordinances for inspection requirements.

Class A fires are the most common. They involve ordinary combustibles such as wood, paper, cloth, rubber, and some plastics.

Class B fires are caused by flammable liquids, gases, and grease. Water can spread and splatter these explosive fires when sprayed into the flames.

Class C fires are electrical and require special attention. Water provides a path of conductivity for electricity to follow, endangering personnel.

Class D fires are combustible metal fires. They require an extinguisher that smothers the fire while drawing out the heat from the burning metal.

Class K fires involve combustible greases and oils. A special wet chemical agent extinguishes and suppresses these very hot and reflashable fires.

Class A B C Fire Extinguishers

Be ready to face the three most common classes of fire. These extinguishers have an easy-to-read pressure gauge and safety pin to prevent accidental discharge. They come charged with extinguishing material, are rechargeable, and include an inspection tag and mounting bracket (fasteners not included). Cylinder is red-painted steel.

Halotron extinguishers are residue-free and the perfect replacement for your old ozone-depleting Halon 1211 extinguishers. Halotron absorbs and removes heat from the combustion zone. It's ideal for electrical equipment, computers, vehicles, boats, and aircraft.

★ Weight of extinguishing material in unit.

Class B C Fire Extinguishers

Purple K and Halotron

Fight flammable liquid, gas, and electrical fires with these extinguishers. They come charged with extinguishing material, are rechargeable, and include an inspection tag and mounting bracket (fasteners not included). Cylinder has a red-painted finish.

Purple K dry chemical extinguishers are the most effective chemical in fighting class B fires. Commonly used in garages, service bays, boats, and fuel transfer areas, extinguishers have an easy-to-read pressure gauge. Cylinder is steel. U.S. Coast Guard approved.

Halotron extinguishers are residue-free and ideal for use around delicate electrical equipment, computers, vehicles, boats, and aircraft. They have an easy-to-read pressure gauge. Cylinder is steel.

Carbon dioxide extinguishers fight flammable liquid, gas, and electrical fires without leaving harmful residue. They're recommended for indoor fires where drafts won't affect the gas discharge. Cylinder is aluminum. Meet Department of Transportation requirements. *5-lb. capacity* model has a nozzle that connects to the cylinder through a rigid swivel tube. *10-* and *15-lb. capacity* models have the nozzle and cylinder connected by a hose.

10- and 15-lb. Cap. Carbon Dioxide

★ Weight of extinguishing material in unit.

Class D Fire Extinguisher (Dry Chemical)

Smother flames and dissipate heat from combustible-metal fires involving magnesium, sodium, potassium, uranium, and powdered aluminum. Extinguisher comes charged with extinguishing material and is rechargeable. It has a pressure gauge and includes an inspection tag and wall mounting bracket (fasteners not included) with two 7/32″ dia. holes and one 11/32″ dia. hole. Cylinder is yellow-painted steel.

UL Rating	Cap., lbs.★	Discharge Time, secs.	Size, Dia. × Ht.		Each
D	30	24 (applicator) 13 (nozzle)	8″ × 32″	6435T23	$396.54
Replacement Wall Bracket				6435T25	1.13

★ Weight of extinguishing material in unit.

Class A Fire Extinguisher (Water)

Compressed air expels water to douse fires from common combustibles. Extinguisher is not charged and comes empty. It requires water and a compressed-air source with a pressure capacity of 100 psi for charging.

Extinguisher has a ⅛″-27 NPT male Schrader fitting for pressurizing, an easy-to-read pressure gauge, inspection tag, and a wall mounting bracket (fasteners not included) with two 7/32″ dia. holes and one 11/32″ dia. hole. Cylinder is stainless steel.

UL Rating	Cap., gal.	Discharge Time, secs.	Size, Dia. × Ht.		Each
2-A	2½	50	7″ × 24½″	6423T3	$104.15
Replacement Wall Bracket				6423T4	.96

Class K Fire Extinguisher (Wet Chemical)

Snuff out extremely hot reflashing oil and grease fires. Extinguisher comes charged but should be professionally recharged. It requires water and a compressed-air source with a pressure capacity of 100 psi and a 5/8″-18NS-2 male fitting for pressurizing. Cylinder is made of Type 304L stainless steel. Extinguisher includes an easy-to-read pressure gauge, inspection tag, wall sign, and wall mounting bracket (fasteners not included) with two 7/32″ dia. holes and one 5/16″ dia. hole. UL listed.

For information about choosing a fire extinguisher, see pg. 1822. For inspection tags, see pgs. 1880-1881.

UL Rating	Cap., gal.	Discharge Time, secs.	Size, Dia.×Ht.		Each
K	1.6	55 to 60	7″×19½″	6708T41	$199.74
Replacement Wall Bracket				6708T45	$3.87

Fire Extinguisher Covers

Bright red-orange covers make extinguishers easy to spot in an emergency. These vinyl-coated fabric covers fit over extinguishers (not included), protecting them from dust and damage when not in use. They have nylon fasteners and a clear plastic window that allows you to check the extinguisher's pressure gauge.

For Extinguisher Capacity, lbs.	Size, Dia.×Ht.		Each
5 to 10	8″×18″	6472T13	$10.16
15 to 30	10½″×27″	6472T12	13.84

Fire Extinguisher Cabinets

Steel

Plastic

Protect fire extinguishers from theft, vandalism, and the elements. Cabinets have acrylic windows, an attached breaker bar, and come with cylinder locks that are keyed alike (all open with the same key). Extinguishers and mounting fasteners are not included.

6471T33 and 6457T63 also hold a 2½-gal. pressurized water extinguisher or 1.6-gal. wet chemical extinguisher.

Steel cabinets are 22-ga. with a rust- and corrosion-resistant white baked-enamel finish. They surface mount and have double-strength tops for added durability. For easy access to extinguisher, just unlock cabinet and slide window up. Cabinets have four 3/16″ dia. mounting holes and one key.

Plastic cabinets are made of lightweight, flame-retardant polystyrene. They can be surface or semi-recess mounted and have rounded corners to prevent injuries. Cabinets have four 1/4″ dia. mounting holes and two keys. **To Order:** Please specify color: red or white.

Sprinkler Heads

Pendent

Upright

Choose from pendent and upright sprinkler head styles. Maximum pressure is 175 psi. UL listed and FM approved. *Note:* Sprinkler heads must be installed with wrenches listed on page 1838.

The K factor (discharge coefficient rating) is 5.6, except for 3/4″ NPT brass heads, which have a rating of 8.0. To determine flow in gpm, multiply the K factor by the square root of the water pressure (psi).

Fusible-link sprinkler heads are triggered by a soft metal alloy that melts at the rated temperature.

Glass-bulb sprinkler heads have a liquid-filled bulb that bursts at the rated temperature.

Wax-coated brass is good for use in corrosive environments.

Quick-response glass bulb sprinkler heads react to heat up to five times faster than other sprinkler heads for greater control of fire damage. Heads must be installed and maintained according to NFPA (National Fire Protection Association) standards.

To Order: Please specify pendent style (for finished ceilings) or upright style (for exposed piping), unless noted.

Recessed Sprinkler Heads

For inconspicuous fire safety, choose these partial-view sprinkler heads. Made of chrome-plated brass, they're pendent style with a 1/2″ NPT male connection. Maximum pressure is 175 psi. UL listed and FM approved. *Note:* Sprinkler heads must be installed with wrenches listed on page 1838.

The K factor (discharge coefficient rating) is 5.6. To determine flow in gpm, multiply the K factor by the square root of the water pressure (psi).

Fusible-link sprinkler heads are triggered by a soft metal alloy that melts at the rated temperature. ***Glass-bulb*** sprinkler heads have a liquid-filled bulb that bursts at the rated temperature.

Concealed Sprinkler Heads

A low-profile cover plate conceals the sprinkler head to make it nearly invisible. When the cover plate temperature rating is reached, the plate falls away to expose the sprinkler head, which has a liquid-filled bulb that bursts at the rated temperature. UL listed.

These sprinkler heads are pendent style and have a 1/2″ NPT male connection. Maximum pressure is 175 psi. The K factor (discharge coefficient rating) is 5.6. To determine flow in gpm, multiply the K factor by the square root of the water pressure (psi).

Note: Sprinkler heads must be installed with wrenches listed on page 1824.

Sprinkler Head Stopper

Wedge a stopper into your sprinkler head to stop water from spraying without shutting down the sprinkler system. Use stopper when mechanical failure sets off one sprinkler head or to minimize water damage after a fire is extinguished. To reach the sprinkler head, insert any 3/4″ to 1″ pipe or pole (not included) into the stopper base. Stopper fits all sprinkler heads except recessed styles.

6468T16 ..... **Each** $57.14

Smoke Detector Panel

Control Panel

Use a central control panel to connect and monitor your smoke detectors and other alarms, as well as to signal personnel that there's an emergency. Control panel requires two 12-VDC rechargeable batteries (sold separately). In case of a power failure, the control panel will operate on the battery backup. Panel is UL listed and meets National Fire Protection Association (NFPA) standard 72.

Control Panel—Comes with all the circuitry needed to power and monitor devices for five "zones." A zone consists of one initiating circuit for an indicating device (smoke/heat detector or fire pull station). Each zone can connect to two signaling circuits for 24 VDC signaling devices (bells, horns, and lights). Combination smoke/heat detectors are sold below; fire pull stations on page 1839; and 24 VDC signaling devices on pages 1841, 1844-1845.

Smoke/heat detectors and signaling devices can be wired as Class A or B (do not exceed a total of 3.5 amps on the two signaling circuits). Panel also has indicators to tell you the status of each zone. Panel is 14 1/4″ Wd.×19 1/2″ Ht.×3 3/4″ Dp. red steel with a locking door (two keys included). It requires hardware connection to 120 VAC, 60 Hz converted to 24 VDC operation.

		Each
Control Panel	**6634T77**	$411.97
12 VDC Rechargeable Battery (2 Required)	**7448K39**	27.00

Combination Smoke/Heat Detectors—For use with the smoke detector panel above. Detectors have a photoelectric sensor for quick and early smoke detection, as well as a 135° F heat detector. They are 6.1″ Dia.×1.85″ Ht. and operate on 12/24 VDC. Temperature range is 32° to 120° F. Color is white. UL listed. Detectors with alarm sound 85 decibels at 10 ft.

	Amp Draw	Alarm		Each
2-Wire	0.06	No	**6634T22**	$43.74
2-Wire	0.06	Yes	**6634T23**	50.89

Photoelectric Smoke Alarms

6668T13 *6668T12*

An optical photoelectric sensor ensures reliable and early warning of the presence of smoke. *Note*: These units are for remote smoke detection only; they're not intended to replace a central smoke detector system.

Multiple alarms can be linked to also warn occupants outside the vicinity of the source of smoke; if one alarm is activated, they're all activated. Up to 12 units of 6668T13 can be connected; 6668T11 and *T12* can have up to six. Alarms can only be connected to other alarms of the same type.

All alarms have a horn that sounds 90 decibels at 10 ft. 6668T11 and *T12* also have a strobe with 177-candela brightness. They help comply with the Americans with Disabilities Act (ADA) when properly installed.

Alarms have 2-wire configuration for 120 VAC, 60 Hz operation (quick-disconnect connection) that draws approximately 0.4 amps. They include a 9-volt backup battery to ensure operation in case of a power failure. Other features include an insect screen to prevent false alarms and a test switch on the face plate. Operating temperature range is 40° to 100° F. Color is off-white. UL listed.

Type	Mount. Style	Size		Each
With Horn	Ceiling	6 1/2″ Dia.×2 5/8″ Ht.	**6668T13**	$75.40

With Horn and Strobe	Wall	5 3/4″ Sq.×4 3/4″ Dp.	**6668T12**	186.77
Replacement 9-Volt Battery			**71455K56**	2.75

Smoke Alarm Guard

Made of 0.14″ thick polyester-coated steel wire, this sturdy octagon-shaped web protects your smoke alarm from tampering and damage. The alarm's LED power indicator remains visible through the guard. Install with four included mounting screws. Size is 8 1/4″ Dia.×2 3/4″ Ht. Color is white. UL listed.

66525T1 ..... **Each** $26.55

Smoke Alarm Tester

Make sure your alarms are working with this spray smoke that simulates fire conditions. Use with photoelectric and ionization smoke detectors. It comes in a 2½-oz. aerosol can that provides 200 tests. UL listed.

		Each 1-11	Each 12-Up
Smoke Alarm Tester	6638T21	$11.76	$10.51

Use the ***extension arm*** for high reaches and the ***add-on arm*** to test ceiling alarms without a ladder. Up to five add-on arms can be connected to the extension arm. Both the extension and add-on arms are aluminum.

	Lg.		Each
Extension Arm	30″	6638T31	$164.29
Add-on Arm	59″	6638T32	164.29

With Optional Extension Arm

Heat Detectors

Detect high heat and fast-rising temperatures. These units send a signal on a hardwire connection to a control panel (not included) when temperatures exceed the temperature rating or rise more than 15° F per minute. Each detector covers a maximum area of 2,500 sq. ft. Add any number of sensors to circuit. Mounting plate included. Size is 5″ Dia. × 2″ Ht. Color is white. UL listed and FM approved.

Fire Alarm Stations and Covers

Stations

Pull

Lift and Pull

ADA-Compliant Push

Install these stations throughout your facility for quick access in case of a fire. They signal along a hardwire connection to a control panel and have normally-open SPST (single-pole, single-throw) circuitry. For information about SPST contacts, see page 855. UL listed.

Pull station is die cast metal with red finish. ***Lift-and-pull*** station is red polycarbonate. ***ADA-compliant push*** station is push-button activated and helps comply with the Americans with Disabilities Act when properly installed. Reset with included key. Station is made of red polycarbonate.

Overall Size, Ht. × Wd. × Dp.	Stations	Each	Repl. Glass Rods	Each

Optional Station Covers

Made of clear polycarbonate, covers protect against tampering and vandalism. They help you comply with the Americans with Disabilities Act when properly installed. UL listed. 1105T25 and *T26* are FM approved.

Choose a cover ***with spacer*** for applications with exposed back boxes and/or conduit. (Spacer adds 2″ to overall depth.)

Covers ***with alarm*** sound a horn (95 decibels at 1 ft.) when cover is lifted. Alarm operates on one 9-volt battery (included).

Indoor/outdoor covers are rated NEMA 3R for light liquid splashes.

Fire Stops

Caulk

Shield against the spread of fire through small openings around electrical, piping, heating, and venting systems. Use a caulk gun to dispense from cartridges; use a trowel to apply from containers. Caulk adheres to common building materials and pipes. When used in a system that meets UL requirements, the caulk can have up to a 3-hour fire rating, except for paintable caulk, which can reach up to a 4-hour fire rating (maximum time compound will prevent passage of fire through opening).

Paintable— Dries to a flexible surface that can be sanded and painted. Contains no solvents or halogens.

Expanding Paintable— Dries to a flexible seal that, when exposed to heat, expands up to seven times its original volume to fill voids left by melting PVC, plastic pipe, and insulation. Can be sanded and painted. Contains no solvents or silicones and won't emit gases.

Watertight— When dry, it forms a long-lasting seal that remains flexible from 40° to 110° F. Use on floors and walls where expansion and contraction exist. FM approved.

	UL Standard	Color		Each
Paintable— *Apply at temperatures from 40° to 90° F.*

Putty

This reusable putty expands to seal off burning pipe and cables and inhibit the spread of fire. Does not contain solvents. Install at temperatures from 40° to 90° F. When used in a system that meets UL requirements, the putty can have up to a 3-hour fire rating (maximum time putty will prevent passage of fire through opening).

Putty pad is ideal for sealing openings around electrical boxes.

	UL Standard	Color		Each
7 1/4″ × 7 1/4″ × 1/8″ Putty Pad	1479, 263	Red	9340K22	$5.83
2-lb. Container	1479	Red	9340K11	40.45

Foam Cement

Mix this lightweight powder with water to create a thick foam cement—just the right consistency to seal large openings where other fire stop materials won't work. Apply with a trowel and easily clean up with water. (For trowels, see page 2123.) One container covers a 2 sq. ft., 3″ thick opening. Install at temperatures from 40° to 90° F. When used in a system that meets UL requirements, the cement can have up to a 3-hour fire rating (maximum time cement will prevent passage of fire through opening). FM approved.

	UL Standard	Color		Each
15.5-lb. Container	1479	Dark Gray	93355K21	$71.47

Expandable Bags

When exposed to heat, these bags (also known as pillows) expand to seal out fire, smoke, and toxic gases. Made of tightly woven fiberglass cloth and filled with noncombustible components, they're water and weather resistant and can be bent or folded. Stack them like bricks in openings where pipes and cables pass through floors and walls. They're especially useful under raised floors and where cable configurations are frequently changed.

When used in a system that meets UL requirements, the bags can have up to a 3-hour fire rating (maximum time bags will prevent passage of fire through opening).

Ht. × Wd. × Thick.	UL Standard	Color		Each 1-4	Each 5-Up
7″ × 13 1/2″ × 1/2″	1479	White	9359K61	$24.92	$21.05

7″ × 13 1/2″ × 1 1/2″	1479	White	9359K63	31.20	26.36

Snug-Fit Strips

These semi-rigid mineral fiber-felt strips fit perfectly into tight spots such as between floor slabs. When used in a system that meets UL requirements, the strips can have up to a 4-hour fire rating (maximum time strips will prevent passage of fire through opening). Maximum temperature is 1200° F. Sold in 25-lb. packages.

About Sound Levels

To choose a buzzer, bell, horn, or speaker that's loud enough, first determine the decibel (dB) rating of background noise. The table below lists some common environments and their average dB ratings. For sound meters, see page 1828.

Office	50 dB
Stockroom	60 dB
Shipping Room	70 dB
Heavy Street Noise	80 dB
Light Machine Shop	90 dB
Heavy Machine Shop	110 dB

Your device needs a dB rating higher than the background noise level—but how much higher? Use the table below to determine how loud a device will sound in your setting. For example, in a 60 dB stockroom a bell with a 70 dB rating sounds twice as loud as background noise, but a 63 dB bell is barely audible.

Add 3 dB	Barely Louder than Background Noise
Add 5 dB	Clearly Louder than Background Noise
Add 10 dB	Twice as Loud as Background Noise
Add 20 dB	Four Times as Loud as Background Noise
Add 40 dB	Sixteen Times as Loud as Background Noise

Miniature Buzzers

A

B

C

D

E

F

Small in size and simple to mount, these buzzers are a great choice for machines, panels, and equipment. Housing is plastic. All have a continuous tone, unless noted. For indoor use. Mounting hardware not included, unless otherwise indicated.

Styles A, ***C***, and ***D*** produce a tone similar to an electronic tone. 5670T31 is UL recognized.

Style E buzzers are open coil and have a steel bracket with a 6-32 threaded mounting hole on one side. Mounting screw included.

Buzzers

G

H

J

Style G—Made of steel. Buzzers come with a mounting bracket with a hole for an 8-32 screw (not included). Color is gray. *12 VDC buzzer* has one wire lead; *24 VAC* and *120 VAC buzzers* have two wire leads.

Style H—Made of epoxy-coated alloy steel. To mount, simply wire the buzzer on a single-gang electrical box (each has two screw terminals) and plug into a receptacle on the included mounting plate (hardware included). Color is gray. *24 VAC* and *120 VAC buzzers* are UL listed.

Style J—Made of die cast aluminum with a weatherproof neoprene gasket seal. It has a ½″ NPT female conduit opening and two ⅜″ dia. mounting holes (fasteners not included). Color is gray. UL listed.

Call Bell

Made of steel with a black base. Size is 3″ Dia. × 2¼″ Ht.

82825T21 ..... **Each** $3.95

Hammer Top Bells

Command attention with these steel bells. They make great doorbells when used with the optional push-button. All have screw terminal connections and are for indoor use. 83125T59 and *T61* have a chrome-plated finish and two 3/16″ dia. mounting holes. All other models have a gray painted finish and three ¼″ dia. mounting holes. Mounting hardware not included.

Transformer converts 120 VAC to 8 or 24 VAC. It has three wire leads.

Push-buttons are 2⅜″ dia., made of brass, and include mounting screws.

Bells

The continuous rapid-fire ringing tone from these bells is distinctive, so it's sure to be heard. All are made of steel and have two wire leads. Mounting hardware not included. Color is gray. UL and C-UL listed.

The *indoor bells* have a backplate with 1/4″ dia. mounting holes for standard electrical box installation. The *indoor/outdoor bells* have an electrical box with neoprene blend gasket, a 1/2″ NPT female conduit opening, and two 9/32″ mounting lugs.

Bells with flashing light have a 2 1/4″ dia. polycarbonate lens and a replaceable bulb with a 0.36 candlepower rating (candlepower measures light intensity). Choose amber or red lens.

Bell guard fits over any of the bells listed. Made of zinc-plated steel, it is 17 3/8″ dia. and has four 5/16″ dia. mounting holes (fasteners not included).

Air- and Steam-Operated Long Distance Whistles

The powerful tone from these whistles blasts over long distances—in every direction—and rises above background noise in loud environments. Signal continues as long as air or steam pressure is applied.

Whistles are made of cast bronze and brass. They operate at 50-200 psi; maximum input pressure is 200 psi @ 550° F. All have NPT female connections.

Whistles without valve operate on air or steam.

Without Valve *With Valve*

Motor-Driven Long Distance Sirens

The built-in motor-driven fan in these sirens generates a shrill signal that's audible over long distances. Sirens produce 113 dB @ 10 ft. Their durable, red powder-coated aluminum housing withstands shock and resists corrosion, so they're approved for use on U.S. Navy ships.

Sirens are 15 7/8″ Ht. × 17 3/4″ Wd. × 15 3/8″ Dp. They have two wire leads and a 1/2″ NPT female conduit opening (male threaded conduit fitting is included). Mount them anywhere, indoors and out (no separate mounting box required). Included mounting bracket has two 9/32″ dia. mounting holes (fasteners not included). ***110-120 VAC/VDC siren*** is UL listed.

	Amps		Each
110-120 VAC/VDC	2.50	6392T11	$532.42
220-250 VAC/VDC	1.25	6392T13	781.34

For information about sound levels, see page 1840.

Electronic Sirens

Siren with Strobe

Delivering 120 dB @ 1 ft., these economical sirens signal emergencies effectively. They have a polycarbonate housing and screw terminal connections. Color is beige. Wall mount using included mounting hardware or electrical mounting boxes (sold separately below).

Siren with strobe produces 20-100 flashes per minute. Lens is ABS plastic. **To Order:** Please specify amber, blue, clear, or red lens.

Indoor electrical mounting box is galvanized steel and has 1/2″ and 3/4″ knockouts. ***Outdoor electrical mounting box*** is aluminum and has a 3/4″ NPT female conduit opening.

	Amps	Ht. × Wd. × Dp.		Each

Outdoor Electrical Mounting Box			7219K26	11.11

32-Tone Electronic Sirens

Choose the tone and volume that suits you best with these versatile sirens. First pick from 32 distinct tones, then adjust the decibel level anywhere from 64 to 113 dB @ 10 ft.

Sirens are made of red ABS plastic. They have two wire leads and three 3/4″ knockouts. Mount indoors and out using the included electrical box, which has four 1/4″ dia. mounting holes (hardware not included).

110/220 VAC siren draws 0.015 amps @ 110 VAC and 0.008 amps @ 220 VAC. ***9-30 VDC siren*** draws 0.06 amps @ 12 VDC and 0.03 amps @ 24 VDC.

Air-Operated Long Distance Trumpet-Style Horns

Single Horn

Dual Horn

Perfect for sending signals across outdoor areas, these horns operate without electricity and can handle harsh conditions. Use them in large indoor facilities, too. Horns are made of bronze with a brass projector, except 5826T71 is made entirely of die cast aluminum. Mounting hardware is not included.

All have NPT female connections. To operate horns with manual valves (not included) see 4625K on page 456. For solenoid valves (not included), see 4635K on pages 470-471.

★ Measured in cfs (cubic feet per second) @ 100 psi.

Long Distance Trumpet-Style Horns

Even from 100 ft. away you'll hear the powerful trumpet tone from these horns. Horns produce a continuous signal; for a noncontinuous signal simply interrupt the voltage from the power supply. Maximum continuous cycle is five minutes on, five minutes off. Use indoors and out.

Horns are made of cast aluminum with a brass projector. Color is gray. They measure 19 3/4″ Lg. × 8″ Wd. × 8″ Ht. and include a wall-mount bracket and two 3/8″ dia. mounting holes (fasteners not included). Horns have a 1/2″ NPT female conduit opening. FM approved.

120 VAC horn has three wire leads. It is also UL listed and CSA certified. ***24 VDC horn*** has two wire leads.

Air Horns

Disposable Horn

Rechargeable Horn and Pump

Refillable Horn

Cabinet

Send an alert (or celebrate a touchdown) with a blast from these small, powerful air horns. All activate with a push-button. Horn canisters are metal; projectors are plastic.

Disposable horns are pocket-sized.

Rechargeable horn can be reused. The included pump lets you recharge the horn by compressing air into the canister.

Refillable horn has a disposable canister that can be replaced when the propellant is gone.

Cabinet for refillable horn is made of 20-ga. steel with an acrylic front cover and tamperproof safety-lock rod (padlock and two keys included). Size is 10 1/4″ Ht. × 5 1/2″ Wd. × 4 1/2″ Dp. Mounting hardware included. Color is high-visibility yellow.

dB @ 10 ft.	Approx. No. of Blasts	Dia. × Lg. × Ht.		Each

For information about sound levels, see page 1840.

Lift Truck Horns

Mount these horns on your lift truck and they'll announce your arrival—no need to shout.

Styles A and ***B*** produce a sound that's loud enough to be heard in industrial settings. They're made of steel, and have two screw terminal connections and two 0.25″ wide male quick-disconnect terminals. For indoor use. Color is black. UL listed.

Style C has a built-in compressor (similar to a car horn) and produces a louder sound than other lift truck horns. It's made of black ABS plastic and has two 0.25″ wide male quick-disconnect terminals. Compressor is made of zinc-plated steel. For indoor use.

Style D lasts longer than other horns because it doesn't have moving parts, which tend to wear out. It's made of black nylon and is water resistant. Horn has epoxy-sealed electronic components and two 0.25″ wide male quick-disconnect terminals. UL listed.

Volts	dB @ 3 ft.	Amps		Each
Standard				
A...12 VDC	115	4	**2580T1**	$34.00

Extra Loud				
C...12 VDC	118	14	**2648T1**	51.34
Long Life				
D...12-60 VDC	114	1.1	**2662T1**	64.39

Lift Truck Backup Alarms

Avoid accidents with these weather-resistant electronic alarms. They beep loudly and repeatedly when your truck moves in reverse. To install, wire the alarm between your battery and reverse lights. Alarms are resistant to vibration, dust, and moisture. Each has four 5/16″ wide mounting slots (mounting hardware not included). UL recognized.

Style E alarms are made of glass-filled nylon and have screw terminal connections. ***Style F*** alarms are made of steel and have two wire leads. *Auto-adjust volume* model detects the sound level around your vehicle and sets the alarm volume 5 dB above that level.

Backup alarm switch activates your alarm when you shift into reverse, so you can use the alarm on a vehicle without backup lights. Switch is made of steel and operates on 12 to 80 VDC at a maximum of 10 amps. Mounting bracket and hardware are included.

	dB @ 4 ft.	Amps		Each
E...12 VDC Single Volume	97	0.2	**57585T12**	$26.63
F...12-36 VDC Single Volume	107	0.4	**56475T25**	50.80
E...12-48 VDC Single Volume	97	0.1	**57585T13**	35.80
F...12-48 VDC Auto-Adjust Volume	82-102	0.2	**5675T61**	76.40
Backup Alarm Switch			**56515T53**	29.27

Lift Truck Motion Bells

Ditch switches and wires—just mount these bells directly to your vehicle's wheel hub. They're made of zinc-plated steel and can be used indoors and out.

Dual-direction bell sounds when the vehicle moves forward and in reverse. It has two 2″ Lg. × 1/2″ Wd. mounting slots (mounting hardware not included).

Single-direction bell sounds when the vehicle moves in forward or in reverse, depending on how you mount it. It can be mounted to 4, 8, and 12 lug hubs (mounting hardware included). ***Hub adapter for single-direction bell*** adapts 3, 5, 6, and 10 lug hubs for use with a single-direction bell.

Mounted to Wheel Hub

	dB @ 4 ft.	Dia.		Each
Dual-Direction Bell	80	6″	**5646T14**	$56.87
Single-Direction Bell	93	8″	**5646T19**	83.30
Hub Adapter for Single-Direction Bell			**5646T18**	16.50

Traffic Alert Bell

Just like the bells you hear at service stations, this bell rings when a vehicle drives over the attached hose.

Bell comes complete with 50 ft. of 3/8″ ID black rubber hose, a hose plug, and a 6-ft. power cord with two-prong plug. It operates on 110 VAC and draws 1.5 amps. The bell is 6″ dia. and can be mounted indoors and out using three 3/8″ dia. mounting holes (mounting hardware not included).

Accessories—Add extra hose to span up to 300 ft. Hose splicer connects hose lengths and hose anchor secures hose end.

		Each
Bell	**63965T1**	$129.85
Accessories		
50 ft. of 3/8″ ID Hose	**63965T12**	52.34
Hose Plug	**63965T13**	1.82
Hose Splicer	**63965T14**	1.98
Hose Anchor	**63965T15**	13.19

Door Chimes

Our chimes come complete with a chime box, transformer, and two push-buttons. The chime box strikes two aluminum tone bars to produce 75 dB @ 3 ft.; it's made of ABS plastic and measures 4 3/8″ Ht. × 7 1/4″ Wd. × 2″ Dp. Transformer has three wire leads and converts 120 VAC to 16 VAC. Surface mount using included hardware. Color is white. For indoor use. *Note:* Chimes do not include wire. For wire, see page 807.

		Each
With Plain Push-Buttons	**56345T71**	$15.19
With Lighted Push-Buttons	**56345T75**	26.16

4-Tone Horn

Even in especially noisy areas this horn provides an audible signal. It has four tones and produces 107 to 111 dB @ 10 ft.

Horn swivels 180° on its mounting base, so you can point it in any direction. It's made of beige thermoplastic and measures 9″ Ht. × 12 1/8″ Wd. × 14 1/2″ Dp. Horn has screw terminal connections and operates on 24 VDC, 120 VAC, or 240 VAC. It draws 0.6 amps @ 24 VDC, 0.21 amps @ 120 VAC, and 0.12 amps @ 240 VAC. Use indoors and out, in temperatures ranging from –31° to +161° F. Surface mount to electrical boxes (sold separately below) using included mounting screws. UL and C-UL listed.

Indoor electrical mounting box is made of galvanized steel and has 1/2″ knockouts. ***Outdoor electrical mounting box*** is made of die cast aluminum and has 1/2″ and 3/4″ NPT female conduit openings. When mounted with the outdoor electrical box, horn meets NEMA 3R for rain protection.

		Each
Horn	**6476T41**	$473.50
Indoor Electrical Mounting Box	**71695K12**	1.91
Outdoor Electrical Mounting Box	**5649T513**	33.10

For information about sound levels, see page 1840.

32-Tone Adjustable-Volume Horns

Standard

Compact

With 32 different tones, these horns let you choose the sound that suits you best. UL listed and California State Fire Marshal (CSFM) approved.

Standard horns produce up to 110 dB @ 10 ft., so they're great for noisy areas. They meet NEMA 3R for protection against rain, so you can use them outdoors. Horns have a die cast aluminum housing and measure 12½″ Ht.×8″ Wd.×8½″ Dp. They have screw terminal connections and a ½″ NPT female conduit opening. Surface mount (no separate mounting box required) using two 13⁄64″ dia. mounting holes (hardware not included). Temperature range is –67° to +150° F. Color is gray.

Compact horns have full-range adjustable output. Horns have a beige thermoplastic housing and measure 4½″ Ht.×4½″ Wd.×3½″ Dp. They have two wire leads. Surface mount to mounting boxes (sold separately below) using included screws. Temperature range is –31° to +161° F. C-UL listed.

Indoor electrical mounting box is made of galvanized steel and has ½″ and ¾″ knockouts. ***Outdoor electrical mounting box*** is made of die cast aluminum. It has ½″ and ¾″ NPT female conduit openings.

Volts	dB @ 10 ft.	Amps		Each
Standard				
120 VAC	0-110	0.30	5682T67	$631.86
24 VAC/VDC	0-110	1.10	5682T65	631.86
Compact				
120 VAC	0-88	0.04	5649T54	331.45
24 VAC/VDC	0-88	0.22/0.07	5649T53	342.88
Indoor Electrical Mounting Box			53515T96	1.98
Outdoor Electrical Mounting Box			5649T513	33.10

27-Tone Hazardous-Location Horns

UL listed for indoor and outdoor use in Class I, Div. 2, Groups A, B, C, and D; Class II, Div. 2, Groups F and G; and Class III hazardous locations.

Horns produce 27 tones. They're gray, made of die cast zinc, and measure 13¾″ Ht.×8″ Wd.×8¾″ Dp. They have three wire leads and three ½″ knockouts. Mount using four 3⁄16″ dia. mounting holes (mounting hardware not included).

Horns operate on any of the following voltages: 120 VAC, 240 VAC, 125 VDC, and 250 VDC. They draw 0.31 amps @ 120 VAC, 0.20 amps @ 240 VAC, 0.20 amps @ 125 VDC, and 0.10 amps @ 250 VDC. Temperature range is 41° to 104° F.

Horn with 4-tone programming lets you select up to four tones, each corresponding to a different warning. If multiple warnings are triggered at once, the first will override the other three and so on.

	dB @ 10 ft.		Each
Horn with 1-Tone Programming	95-110	5823T41	$857.43
Horn with 4-Tone Programming	95-110	5823T42	1,126.88

Single-Tone Hazardous-Location Horns

Sound off, even in hazardous spaces. These horns are UL listed for Class I, Div. 1 and 2, Groups B, C, and D; Class II, Div. 1 and 2, Groups E, F, and G; and Class III hazardous locations. They're rated NEMA 4X for corrosion resistance and washdown protection. Horns are made of die cast zinc and measure 7⅝″ Ht.×7⅜″ Wd.×4¼″ Dp. They include two wall-mount brackets with two ⅜″ dia. mounting holes each (mounting hardware not included). All have three wire leads and a ¾″ NPT female conduit opening. Use indoors and out, in temperatures ranging from 25° to 104° F. Color is gray.

Volts	dB @ 10 ft.	Amps		Each
120 VAC	97	0.13	5650T23	$661.52
24 VDC	97	0.16	5650T32	822.14

Single-Tone Adjustable-Volume Horns

A

B

C

Pump up the volume (or take it down a notch) by adjusting a screw on the grille of these horns. Horns are made of heavy duty die cast zinc. Color is gray. Mounting hardware included. UL listed.

Style A horns have screw terminal connections and a steel backplate. They can be mounted to any standard electrical box. ***Style B*** horns are rated NEMA 4X for corrosion resistance and washdown protection. Furnished with three wire leads. ***Style C*** horns are also rated NEMA 4X for corrosion resistance and washdown protection. They have a built-in electrical box, screw terminal connections, and a ¾″ NPT female conduit opening.

8-Tone Fire Alarm Horns and Horns with Strobe

D

E

F

G

H

J

Each of these horns offers eight unique alarm sounds to signal a fire. Horns are made of thermoplastic and have screw terminal connections. Wall mount using mounting boxes (sold separately below). Mounting hardware included. UL listed and California State Fire Marshal (CSFM) approved.

Horns have a temperature range of –31° to +150° F.

Horns with strobe flash 60 times per minute to provide a visual signal as well. Red horns have FIRE printed on the strobe lens (*Style G)* or on the side of the horn (*Style J*). *Styles F* and *G* have a 15 candela strobe (candela is a unit of measurement of light intensity) with a white lens. Temperature range is –31° to +150° F. *Styles H* and *J* have a 15/75 candela strobe with a clear lens. For indoor use only.

Indoor electrical mounting box for all horns is made of galvanized steel and has ½″ and ¾″ knockouts. ***Outdoor electrical mounting boxes for VAC horns*** are made of die cast aluminum and have ½″ NPT female threads. ***Outdoor electrical mounting boxes for VDC horns*** are made of thermoplastic and have ½″ knockouts.

For information about sound levels, see page 1840.

Fire Alarm Horns with ADA-Compliant Strobes

Improve your alarm system by sending an alert that's both seen and heard. These thermoplastic horns have two tones, a built-in strobe with a clear polycarbonate lens, and screw terminal connections. Wall mount (mounting hardware included) on an electrical mounting box (sold separately below). UL listed and CSFM (California State Fire Marshal) approved.

Each horn has multiple candela settings (candela is a unit of measurement of light intensity). The Americans with Disabilities Act (ADA) requires 75 candela strobes in indoor public areas.

Indoor horn has a 15/30/75/110 candela strobe. ***Indoor/outdoor horn*** has a 15/35/60/75/95/110 candela strobe. It operates in temperatures ranging from –40° to +151° F. It's also C-UL listed.

To Order: Please specify red or white.

Indoor electrical mounting box is made of galvanized steel and has 1/2″ and 3/4″ knockouts. ***Outdoor electrical mounting boxes*** are made of aluminum and have 1/2″ knockouts.

Outdoor Electrical Mounting Box (Red)				2684T8	19.85
Outdoor Electrical Mounting Box (White)				2684T9	19.85

Recorded Voice Message Speakers

Record a 20-second message, such as evacuation instructions, that plays repeatedly when triggered. All speakers are white polycarbonate and measure 6 9/16″ Ht. × 5 1/16″ Wd. × 3″ Dp. Mount on one of the electrical mounting boxes sold separately below (mounting hardware included). UL and C-UL listed.

Speakers with strobe flash 60 times per minute. Both have a 110 candela strobe.

Indoor electrical mounting box is made of galvanized steel and has 1/2″ and 3/4″ knockouts. ***Outdoor electrical mounting box*** is made of aluminum and has 3/4″ NPSM female conduit openings.

Outdoor Electrical Mounting Box			7219K26	11.11

Fire Bells

FM-approved and bright red for visibility, these bells make great fire alarms. Each has an extra set of screw terminal connections for a fire alert signaling system. Bells are made of aluminum. Wall mount (mounting hardware included) indoors and out on an electrical mounting box (sold separately below). UL and C-UL listed.

Indoor electrical mounting box is made of galvanized steel and has 1/2″ and 3/4″ knockouts. ***Outdoor electrical mounting box*** is made of die cast aluminum and has 1/2″ NPT female conduit openings. Color is red.

Bell guard is made of zinc-plated steel. It is 17 3/8″ dia. and has four 5/16″ dia. mounting holes. Mounting hardware not included.

Dia.	Volts	dB @ 10 ft.	Amps		Each
6″	115 VAC	86	0.12	49565T23	$52.89
10″	115 VAC	88	0.12	49565T25	71.58
Indoor Electrical Mounting Box				71695K41	1.98
Outdoor Electrical Mounting Box				59835T34	13.86
Bell Guard				5684T46	36.67

Emergency Communication Speakers

Send an urgent message with these speakers—they're suitable for use with fire alert signaling, emergency evacuation, and mass notification systems.

Speakers operate on 25/70 volts. Mount on an electrical mounting box (sold separately below) using two 1/4″ dia. mounting holes (mounting hardware not included). Use them indoors and out in temperatures ranging from –40° to +150° F. UL 1480 listed for emergency voice and alarm systems.

Speakers are made of steel. Size is 5 9/16″ Ht. × 5 9/16″ Wd. × 3 1/8″ Dp. ***Speakers with strobe*** flash 60 times per minute. They're made of ABS plastic and have a 75/110 candela strobe with a polycarbonate lens (candela is a unit of measurement of light intensity). Size is 5 1/2″ Ht. × 5 1/2″ Wd. × 5 7/16″ Dp.

To Order: Please specify red or white.

Note: Each speaker has several wattage outputs—the higher the watts, the louder your speaker will be. If you're connecting several speakers to one amplifier, the total watts of all speakers should not exceed the maximum wattage of the amplifier.

Indoor electrical mounting box is made of galvanized steel and has 1/2″ and 3/4″ knockouts. ***Outdoor electrical mounting boxes*** are made of ABS plastic and have 1/2″ knockouts.

Outdoor Electrical Mounting Box (White)		7638T78	10.53

Ceiling-Mount Speakers

For clear public address announcements and background music, choose these speakers. They operate on 25/70 volts except 56705T37, which operates on 70 volts. All are white and have an epoxy-coated finish. Speakers also have a steel grille and include mounting hardware. For indoor use.

Note: Each speaker has several wattage outputs—the higher the watts, the louder your speaker will be. If you're connecting several speakers to one amplifier, the total watts of all speakers should not exceed the maximum wattage of the amplifier.

Watts	Max. dB @ 3 ft.	Volume Control	Dia.		Each

Quick-Install Speakers

Here's a no-hassle solution to your sound system needs: these speakers easily install into ceiling tiles or mount onto beams. They're perfect for paging and background music. Both models operate on 25/70 volts and have a white epoxy-coated steel grille. For indoor use.

Ceiling tile lay-in speaker takes the place of a 24″ × 24″ standard ceiling tile—no cutting necessary.

Beam-mount speaker secures to a beam or girder using the two included C-clamps.

Note: Each speaker has several wattage outputs—the higher the watts, the louder your speaker will be. If you're connecting several speakers to one amplifier, the total watts of all speakers should not exceed the maximum wattage of the amplifier.

Ceiling Tile Lay-In

For information about sound levels, see page 1840.

Wall-Mount Speakers

Expect high-quality paging and background music from these speakers. They operate on 25/70 volts and have a knob to adjust volume. Speakers have six 3/8″ dia. and four 1/4″ dia. mounting holes (mounting hardware not included). For indoor use.

Housing is epoxy-coated steel. ***White speaker*** has an epoxy-coated steel grille. ***Black speaker*** has a gray fabric grille.

Note: Each speaker has several wattage outputs—the higher the watts, the louder your speaker will be. If you're connecting several speakers to one amplifier, the total watts of all speakers should not exceed the maximum wattage of the amplifier.

Watts	Max. dB @ 3 ft.	Ht. × Wd. × Dp.	Color		Each

Premium Wall-Mount Speakers

Boasting the best sound quality of all our speakers, these units are perfect for playing music at a standard volume or softly in the background. You can use them for paging, too. Both have a switch to select either 70 volt or 8 ohm operation. They have an ABS plastic housing and an enamel-coated aluminum grille. Mounting bracket has four 3/16″ dia. mounting holes (fasteners are not included). Speakers can be used outdoors if they are protected by an awning or overhang.

Note: Each speaker has several wattage outputs—the higher the watts, the louder your speaker will be. If you're connecting several speakers to one amplifier, the total watts of all speakers should not exceed the maximum wattage of the amplifier.

Watts	Max. dB @ 3 ft.	Ht. × Wd. × Dp.	***White***	Each	***Black***	Each
1.3, 2.5, 5.0, 10.0, 20.0	101	10 1/4″ × 6 7/8″ × 6 3/4″	6489T4	$85.33	6489T3	$85.33
				Per Pair		**Per Pair**
1.3, 2.5, 5.0, 10.0, 20.0	101	10 1/4″ × 6 7/8″ × 6 3/4″	6489T5	$144.17	6489T6	$144.17

Cable-Hung Speaker

For 360° sound projection, hang this speaker from a ceiling, beam, or girder. It's perfect for high-quality paging and background music in large spaces. Speaker is 10″ dia. and is made of white ABS plastic. It operates on 70 volts and comes with a 9 1/2-ft. braided metal cable. For indoor use.

Note: Each speaker has several wattage outputs—the higher the watts, the louder your speaker will be. If you're connecting several speakers to one amplifier, the total watts of all speakers should not exceed the maximum wattage of the amplifier.

Watts	Max. dB @ 3 ft.		Each
2.5, 5.0, 10.0, 20.0	106	4304T3	$139.20

Vandal-Resistant Speaker

Vandals won't get past the tamper-resistant pin-in-torx screws securing this speaker's cover to its housing. Speaker operates on 25/70 volts and has a white epoxy-coated steel housing with four 1/4″ dia. mounting holes (mounting hardware not included). Size is 11 5/8″ Ht. × 11 5/8″ Wd. × 4 1/8″ Dp. Surface mount indoors and out. A screwdriver bit is included for pin-in-torx screws.

Note: Each speaker has several wattage outputs—the higher the watts, the louder your speaker will be. If you're connecting several speakers to one amplifier, the total watts of all speakers should not exceed the maximum wattage of the amplifier.

Watts	Max. dB @ 3 ft.		Each
1.0, 2.0, 4.0, 8.0, 16.0	121	7695T1	$149.90

Indoor/Outdoor Horn-Shaped Speakers

For loud, clear paging indoors and out, choose these powerful speakers. They're made of epoxy-coated aluminum. All include a mounting bracket with three 1/4″ dia. mounting holes. Fasteners are not included.

Style A doesn't have a transformer, so it must be attached to an 8-ohm amplifier output. ***Style B*** operates on 25/70/100 volts. ***Style C*** operates on 25/70 volts.

Note: Each speaker has several wattage outputs—the higher the watts, the louder your speaker will be. If you're connecting several speakers to one amplifier, the total watts of all speakers should not exceed the maximum wattage of the amplifier.

Watts @ 70V	Max. dB @ 3 ft.	Ht. × Wd. × Dp.	Color		Each
A 15.0♠	119	8″ × 6″ × 8″	Gray	5642T94	$48.57
B 1.0, 2.0, 3.8, 7.5, 15.0	120	8 3/4″ × 7 7/8″ × 9 3/8″	Gray	5642T96	115.42
B 2.0, 3.8, 7.5, 15.0, 30.0	126	11″ × 10″ × 10 1/2″	Gray	5642T31	131.25
C 1.8, 3.7, 7.5, 15.0, 30.0	121	9 5/8″ × 15 3/4″ × 12 1/8″	Beige	5642T88	173.24

♠Watts with an 8-ohm amplifier.

Adjustable-Volume Indoor/Outdoor Horn-Shaped Speakers and Power Supplies

The built-in amplifiers in these horns have volume controls, so you can manually adjust output based on background noise. Horns are designed for telephone paging, and are compatible with most Private Automatic Branch Exchange (PABX), Expansion Key Service Unit (EKSU), and other telephone systems with a 600-ohm output. They don't work directly with a telephone.

Speakers— Made of beige epoxy-coated aluminum, speakers come with a mounting bracket with three 3/16″ dia. mounting holes (fasteners not included). They must be externally powered by a 24 VDC power supply (sold separately below).

Power Supplies— Required to operate speakers. They convert 120 VAC to 24 VDC, include a 6-ft. cord, and are UL listed. The *0.6 amp* power supply has a two-prong plug; the *4.0 amp* power supply has a three-prong plug.

Note: The total amps drawn by your speaker must not exceed the power supply's amp rating.

Speakers

Watts	Max. dB @ 3 ft.	Amps	Ht. × Wd. × Dp.		Each
5	114	0.45	9 1/2″ × 9″ × 10″	56685T21	$115.14
15	117	1.4	9 1/2″ × 9″ × 10″	56685T22	119.48

Power Supplies

		Each
0.6 Amp Power Supply	56685T31	$52.16
4.0 Amp Power Supply	56685T32	212.79

Speaker Volume Controls

With Knob Turn

With Key Lock

Wire one of these controls between your speakers and amplifier to adjust the volume. Controls have 10 sound levels and an off position, and are compatible with 25-, 70-, and 100-volt systems. A stainless steel, flush-mount mounting plate and mounting hardware are included. ***Controls with knob*** are UL listed. ***Control with key lock*** prevents tampering.

Watts	Ht. × Wd. × Dp.		Each
With Knob			
25	4 1/2″ × 2 3/4″ × 2 3/4″	59025T3	$23.03
50	4 1/2″ × 2 3/4″ × 2 3/4″	59025T7	26.06
100	4 1/2″ × 2 3/4″ × 3 1/8″	59025T8	32.02
With Key Lock			
100	4 1/2″ × 2 3/4″ × 2″	59025T48	62.98

For information about sound levels, see page 1840.

Public Address System Amplifiers

Bench Top

Wall Mount

Power your 25- or 70-volt public address system with these amplifiers. They support paging and background music (music is automatically muted during paging), and have bass and treble controls. All include inputs for low-impedance microphones and a 600-ohm phone system. (Please make sure your phone system has an output of 600 ohms.) Amplifiers operate on 120 VAC, 60 Hz. Color is black.

Bench-top amplifiers are not fastened to a surface, so they're easily moved. The *15- and 30-watt* models have a 5-ft. cord with a three-prong plug. They can also be wall mounted using the wall-mount bracket (sold separately below). Bracket has two 5/32″ wide mounting slots (mounting hardware not included). The *60- and 125-watt* models have a 6-ft. cord with a three-prong plug. Both include a bracket that has four 9/32″ wide mounting slots to fasten to a standard 19″ electronics rack, as well as fasteners for attaching to the amplifier (but not the rack). ***Wall-mount amplifier*** has a 6-ft. cord with a three-prong plug. It has four 11/32″ dia. mounting holes (mounting hardware not included). UL and C-UL listed. CSA certified.

Watts	Amps	Ht. × Wd. × Dp.		Each
Bench-Top Amplifiers				
15	0.5	3½″ × 8 7/16″ × 11″	**8230T11**	$203.70

Portable Public Address Systems

Corded System

Weighed down by heavy amps, speakers, and microphones? Switch to these systems—each weighs just 4 lbs. (8 lbs. with batteries). They include a 50-watt amplifier, a 6″ Ht. × 8″ Wd. speaker, plus an input for a CD player, tape player, or projector. Two interface cables (one for a laptop; one for a projector) and a black plastic carrying case with an adjustable shoulder strap are also included. Both systems operate on 10 D batteries or an AC adapter (all sold separately below). Size is 11″ Ht. × 13½″ Wd. × 4½″ Dp. UL and C-UL listed.

Corded system includes a microphone and 15-ft. cord with a 3-pin XLR female plug. ***Wireless system*** provides hands-free talking within 300 ft. It includes a wireless receiver, wireless transmitter (requires one 9-volt battery, sold separately below), and two microphones: one headset model and one low-impedance lapel model.

AC adapter has a 7½-ft. cord with a three-prong plug.

		Each
Corded System	**5986T24**	$444.74
Wireless System	**5986T26**	666.67
AC Adapter	**5986T28**	114.61
9-Volt Battery	**71455K56**	2.75
D Battery (6/Pkg.)	**71455K55** Per Pkg.	$7.32

Microphones, Plugs, and Cords

Microphones

Speak up and be heard with help from these microphones. They're perfect for paging, public address, and dispatching. Compatible with all amplifiers with a low-impedance input.

Hand-held model filters out wind, breathing, and other distracting sounds. It includes a swivel adapter for use with a stand, and has a 3-pin XLR male plug for connecting to a cord (sold separately below). Color is beige.

Hand-held push-to-talk model has a 5-ft. cord with wire leads. It includes a mounting bracket with two 5/32″ dia. mounting holes (fasteners not included). Color is black.

Desktop model can lock "on" for hands-free operation. It has a 7-ft. cord with wire leads. Color is black and silver.

Microphone clip fits all microphones with ¾″ dia. or larger handles. It's made of black plastic and has a 5/8″-27 threaded female connection for mounting to a microphone stand.

Microphone stand extends from 35″ to 63″ high. Made of chrome-colored steel, it has a black 10″ dia. base and a 5/8″-27 threaded male connection on top.

		Each
Hand Held	**56785T111**	$86.21
Hand-Held Push-to-Talk	**55295T125**	90.91
Desktop	**55295T225**	163.64
Microphone Clip for Hand-Held Microphone	**55295T131**	7.27
Microphone Stand for Hand-Held Microphone	**55295T132**	66.53

Plugs

Style D allows low-impedance microphones to connect to high-impedance inputs.

Connections		Each
A ... ¼″ Plug	**58075T31**	$3.78
B ... 3-Pin XLR Male Plug	**58075T33**	4.54
C ... 3-Pin XLR Female Plug	**58075T32**	4.96
D ... ¼″ Plug to 3-Pin XLR Female Plug Adapter	**58075T34**	18.00
E ... ¼″ Plug to RCA Female Jack Adapter	**58075T35**	1.35

Cords

These 22 AWG cords have a 3-pin XLR female plug on one end and a 3-pin XLR male plug on the other end. Cords have a black PVC jacket.

		Each
6 ft.	**6009T1**	$13.88
12 ft.	**6009T2**	18.08
25 ft.	**6009T3**	27.83
50 ft.	**6009T4**	41.79

Megaphones

Our voice-amplifying megaphones provide loud, clear communication even in noisy environments. They're weatherproof, so you can use them outdoors. All have an index finger push-to-talk trigger switch, a volume control knob, and a carrying strap. They're made of ABS plastic. Color is blue and white except for 5645T21, which is gray and red. Batteries sold separately below.

Megaphones with a signal tone have a switch to activate the tone. ***Megaphone with detachable microphone*** has a shoulder strap.

Handle Grip

Pistol Grip

	Signal Tone	Power, watts	Range, yds.	Dia. × Lg.	Batteries Required		Each

Wired Intercom Stations

Master Station

Wall Flush-Mount Substation

Desktop Substation

Wall Surface-Mount Substation

Bracket-Mount Horn Substation

Ceiling Flush-Mount Substation

Create your own internal communication system. Choose a master station and one or more substations, then connect your system using three-wire cable (sold separately). Maximum cable length is 1000 ft.

All components are made of steel. Mounting hardware is included, unless noted. For indoor use in temperatures ranging from 0° to 100° F, unless noted.

Master stations have a built-in microphone and a volume control knob. Designed for desktop use, they operate on 120 VAC, 50/60 Hz and draw 0.6 amps. Both have a 6-ft. cord with a three-prong plug. 5743T11 has channel select buttons that let you contact a specific substation and an "all call" button that contacts all substations at once.

Substations with call switch enable you to initiate communication. ***Substations without call switch*** must be selected at the master station in order to communicate. *Ceiling flush-mount* model has a volume control knob.

	Watts	Ht. × Wd. × Dp		Each
Master Stations				
For One Substation	—	3⅛″ × 10½″ × 8¾″	**5743T32**	$320.73
For Up to Five Substations	—	3⅛″ × 10½″ × 8¾″	**5743T11**	367.83
Substations with Call Switch				
Wall Flush-Mount	2	7¼″ × 4¾″ × 2″	**5743T33★**	101.54
Desktop	2	2⅞″ × 7½″ × 8¾″	**5743T15**	156.54
Substations without Call Switch				
Wall Surface-Mount	5	12″ × 12″ × 8″	**5743T16●**	148.92
Bracket-Mount Horn	60	9″ Dia. × 9″ Dp.	**5743T17★**	310.96
Ceiling Flush-Mount	5	12⅞″ Dia. × 3″ Dp.	**5743T51**	58.38
Accessories				
Surface-Mount Enclosure for 5743T33			**5743T41★**	27.50
Three-Wire Cable			**5743T34★**	**Per Ft.** $0.39

★ For indoor and outdoor use. Temperature range is –30° to +140° F.
● Has one 3/16″ diameter mounting hole. Mounting hardware not included.

Severe Duty Wired Intercom Stations

Bolstered by their sealed, heavy cast aluminum housing, these intercom stations can handle extreme heat and cold indoors and out. Rated NEMA 4X for corrosion resistance and washdowns. UL and C-UL listed for marine applications.

Stations have a solid-state amplifier, speaker, talk/listen toggle switch, and volume control knob. Connect multiple intercom stations using two-wire cable (sold separately). Any station can communicate with all other stations connected to the same circuit, but cannot have a private conversation with a single station. All operate on 120 VAC, 50/60 Hz and draw 0.24 amps. Stations come with a 7-ft. power cord with a three-prong plug and a 7-ft. connection cable with bare ends. They have two 13/32″ dia. holes for wall mounting (fasteners not included). Size is 9⅞″ Ht. × 6¾″ Wd. × 3⅞″ Dp. Temperature range is –31° to +150° F.

		Each
Intercom Station	**5656T25**	$611.28
Call-Tone Intercom Station	**5656T27**	656.07
Two-Wire Cable	**71335K55**	**Per Ft.** $0.30

Digital Voice Recorder

Record and store up to 280 hours with this pocket-sized recorder. It activates with a push-button and has a built-in 2 GB memory. The recorder displays a time and date stamp for each recording on its screen, plus it has five folders to help you stay organized. Size is 4¼″ Ht. × 1⅜″ Wd. × ¾″ Dp. Color is silver. Operates on two AAA batteries (included).

8700T1 ..... **Each** $58.73

Battery-Operated Wired Communication Set

Get clean, clear voice communication over any pair of wires including coaxial cable, telephone lines, and common copper wiring—no additional cable needed. This set is effective up to 5000 ft. *Note:* Do not use on powered circuits.

This set is ideal in areas where RF (radio frequency) communication is banned or reception is poor. It includes two communication units (each operates on a 9-volt battery, sold separately), two headsets for hands-free communication, cables for hookup, and test leads for wire tracing. Housing is ABS plastic. Size is 5⅛″ Ht. × 1⅞″ Wd. × 1¼″ Dp.
